Unions prepare for battle over 17,000 rail jobs

Railway union leaders yesterday signalled their intention to resist British Rail's new five-year corporate plan, which envisages a further cut-back of 17,000 jobs and the closure of 1,900 miles of track. But their hostility was muted and there is no immediate threat of a strike over British Rail's plans to reduce by 25 per cent its reliance on government subsidies in the period up to 1988. Sir Peter Parker, the outgoing British Rail chairman, predicted that the unions would accept the proposals. Mr Ray Buckton, general secretary of the Associated Society of Locomotive Engineers and Firemen, said his members would resist anything that retards the quality of the service or the working conditions of those in the industry, and Mr Jimmy Knapp, the National Union of Railwaymen general secretary, agreed: "It looks as though the intention is to solve the industry's problems on the backs of the workforce." But Sir Peter, who ends his seven-year chairmanship in three weeks, defended the plan saying: "I accept that change is very difficult and awkward. But we have lost about 200 people a week from this system for some time. The number we are talking about over the next five years is actually less than we have lost over the last few years. "The way to secure future jobs in the industry is to see that change happens. While that may be troublesome, I have every confidence that the railway community will accept it. "Here we have a plan which will show rising productivity, rising revenues and rising investment at lower cost to the taxpayer." British Rail has surprised its union critics in two ways. The bad news is the industry's intention to reduce its reliance on the Government's Obligation grant from £943m this year to £708m in 1988. The "good" news is that only 49 route miles with regular passenger services are being considered for closure, most of them in the scenic Settle-Carlisle line through the northern Pennines. Much of the 1,900 miles threatened as "no longer essential to the running of the railway" is already out of use or used only by freight trains. To move into profit from 1985, the British Railways Board intends to reduce manpower more quickly. The last five-year plan which proposed a reduction of 38,000 posts by 1985 will be exceeded by nearly 4,000 and a further 7,000 posts will be saved in the remaining three years of the plan. Corporate payroll numbers, already down by 55,500 since 1975, will fall by a further 25,900 by the end of 1988. The railways will then employ only 142,000 people. There is some suspicion in union circles that the plan, a much shorter document than expected, may not be the full story and that further proposals may be in hand for presentation to the Secretary of State for Transport. Mr Knapp called for new investment decisions from the Cabinet if the railway system was not to suffer "a slow death", while Mr Buckton warned of fresh reductions in services, particularly in Southern Region, if the job cutbacks go ahead. As many as 2,500 drivers' jobs are due to be phased out, though the Aslef leader insisted that British Rail is asking footplatemen at depots such as Euston to work overtime because of a shortage of train crews. "Not only will our members be thrown on the scrap heap, but the service will suffer. The protest is likely to be confined to that level at least for some weeks. The two sides are to begin talks on the corporate plan in mid-September. Streamlined Science, page 4. Leading article, page 9.

Mr Ray Buckton: "Service will suffer".

Britain's Victory 83 (K-22) leads Canada I during foreign selection trials for the America's Cup off Newport. (Report, more photographs, back page.)

Hurricane shuts down Houston

Houston (Reuter) - Hurricane Alicia tore into the south coast of Texas with 120 mph winds early yesterday, cutting off the port city of Galveston and shutting down Houston, the state's biggest city. Two people were reported killed by falling trees. The eye of the storm hit Western Galveston Island, a coastal barrier island already deserted by residents ordered to evacuate their homes. Early reports from Galveston said the city had escaped serious damage but a big hotel, the Galveston, was described as a wreck, with one side blown out. The streets of Houston's business district were strewn with glass and the entire area was closed by police, bringing business to a halt. Houston's airports, some with light aircraft tipped on their backs, were closed until further notice. Communications with Galveston were sporadic, and the extent of damage was not known. Most telephone lines were down and the main highway to Houston had been closed by rain since Wednesday. At the Johanson Space Centre, south-east of the city, power was cut, trees were uprooted and windows blown out. Flooding forced evacuations and Red Cross officials said about 15,000 people had sought refuge in shelters across south-east Texas.

French keep Libya guessing on troops

France continued to step up its reinforcements in and around Chad yesterday. A further 458 officers and men of the 9th division of Marine Infantry left Paris by air for Chad's neighbour, the Central African Republic and other troops ordered to the region are believed to include members of the Foreign Legion. The Defence Ministry refused to confirm widespread reports that France is to commit as many as 3,000 soldiers to Chad as well as Air Force units, "We do not discuss numbers or movements", a spokesman said. Between four and six sophisticated Jaguar ground-attack aircraft are known to be in the region and a number of troop transports. Some reports say French Air Force personnel are now inside Chad, others that they are still across the border in the Central African Republic. More French military aircraft, including Jaguars are in other nearby African countries. The French air said to be working hastily to make the airport at Ndjamena, the capital, suitable for military aircraft and to install advanced radar systems. At the same time, the rebels are trying to repair the airport at Faya-Largeau. So far, the Defence Ministry has admitted only to the presence of about 1,000 troops in Chad, most of them in and around the capital, with the rest deployed north along a strategic line some 280-miles south of the rebel-held town of Faya-Largeau. The French news blackout appears to be designed to keep the Libyans guessing about the strength of French forces and their intentions. But that tactic could backfire, said Colonel Gaddafi, the Libyan leader, believes some of the wilder rumours about the rapid and huge French build-up, and counters it with one of his own. Meanwhile, American officials in Paris denied that the US has estimated the number of Libyan troops in Chad at about 6,000. The figure they said, was closer to 2,500. The Chad Embassy, however, put the number of Libyans at 5,000. MONASTIR: At a news conference on his way home after a three-day visit to Tunisia, Colonel Gaddafi accused the United States of lying about involvement of Libyan troops in Chad to justify Washington's own interference there (AP reports). Peace call: A joint communiqué issued by Tunisia and Libya at the end of Colonel Gaddafi's visit, called for national reconciliation in Chad and the restoration of peace and security there. Spectrum, page 6.

Shares set record for fourth day

Shares continued their record rise with the FTSE 100 index up 1.1 per cent against the dollar in volatile currency markets yesterday. The stock market moved ahead strongly after an initial rise on Wall Street. The FTSE 100 index of 30 leading stocks rose to 741.1 before closing at 738.9, a rise on the day of 2.9. It is its fourth successive day of record closes. With the dollar well below its recent highs, sterling closed up 1.05 cents at \$1.5235 and was also firmer against continental currencies. Its trade-weighted value gained 0.3 to 85.5. There was also comfort for the City on the outlook for interest rates as the Treasury reassured financial markets that rapid growth in money supply should ease. Figures from the Bank of England confirmed some slackening in money growth, although it is still well above target, and this has helped to dampen any remaining fears that domestic interest rates might have to rise soon. However, other government indicators published yesterday provide evidence that the economic recovery is sluggish. The longer leading economic indicators which chart movements in the economy a year ahead, scarcely moved between April and July. Money rate slows, page 13.

Owen backs Steel veto on manifesto

Dr David Owen yesterday stepped into the Liberal Party dispute over Mr David Steel's veto of the general election manifesto by praising Mr Steel's courage and guts in standing up to his party when it had advocated policies which were against the national interest. In an intervention which seemed certain to infuriate some sections of the Liberal Party, the Social Democratic Party leader suggested that if the Alliance had fought the election on the defence policy approved by the Liberal assembly it would have been lucky to have achieved what it did. Dr Owen's remarks came in a radio interview in which he made clear, in the strongest terms he has used, his opposition to a merger with the Liberals. "What came out of a merger, he said, was not a leaner, tighter, harder party, but a 'fogg' party." He said that yesterday's opinion poll showing the Alliance in second place demonstrated the appeal of "two parties working together... and retaining some individuality, Liberal and Social Democrat." But in what Liberals were seeing last night as signs of movement on Dr Owen's part, he gave his backing to a proposal which would allow the members of the Alliance party not fighting a particular seat to have a say over the choice of candidates being made by the other. Although Dr Owen is opposed to the joint selection of candidates, which is seen as the logical step towards a merger, he said that more practical proposition was "joint shortlisting." That would effectively mean that members of the party not fighting the seat would be able to prevent any candidate they considered unsuitable from being considered. That, Dr Owen said, was a mechanism for deepening the relationship without considering a merger. The obvious difference of emphasis within the SDP over a merger were again on show when Mr Ian Wrigglesworth, one of the party's six MPs, spoke of the "quite futile and not very convincing" search for differences by some people in an attempt to prove the need for a permanent separate identity, and the exaggeration of the different electoral appeal which the two parties had to different sections of the public. Mr Wrigglesworth, writing in The Socialist Democrat, said there had been talk of merger mania, but so far he had only seen mania demonstrated in the SDP by those opposed to a merger. But Dr Owen's criticism of Liberal policies, and his tribute to Mr Steel for not adopting them, seemed likely to cause more of a controversy.

2,000 dismissed in orange juice row

All the 2,000 workers at a North Sea platform building yard were dismissed yesterday in a dispute over free orange juice and coffee for working in hot conditions. The men, welders, fabricators, riggers, scaffolders and painters at Highlands Fabricators, of Nigg, 50 miles north of Inverness, walked out nine days ago in protest at the withdrawal of their free drinks and "cooling off" shelters. They went on unofficial strike because of "excessive" heat inside the platform hull unit they were building for the Hutton Field. They said temperatures inside had increased after pre-heat welding was introduced. The company could not give an exact temperature. A spokesman said the free drinks and cooling-off facilities had been withdrawn and steps taken to prevent abuse of showers after the temperatures were reduced. The free orange juice and coffee were costing the company £100,000 a year. Mr Robert Walker, the managing director, told the men the company was in a very serious financial position because of low productivity, poor attendance, inefficient work practices, and recent unofficial strikes. The men had been sacked because they had broken negotiating procedures. Mr Rab Wilson, shop steward's spokesman, said: "We do not want a strike. Only recently we took a £20 a week pay cut to help the yard." He had been told the orange juice cost £20,000 a year, but for that each man would have to drink eight gallons a day.

Ban toxic weapons urges chemical war scientist

A leading government expert on chemical weapons has made an unprecedented appeal to his colleagues to help find ways of banning such substances, some of which are so devastating that their effects on populations can match those of nuclear weapons. Dr Thomas Inch, deputy chief scientific officer of the Chemical Defence Establishment at Porton Down, near Salisbury, says revision of the potential effects of chemical weapons has provoked widespread demands for a comprehensive ban, something he believes is possible. In his appeal to the chemical and pharmaceutical industries, Dr Inch says chemical weapons can now be used as instruments of mass destruction, especially the so-called "supertoxins" which are lethal in unimaginable quantities and measured in less than 100,000th part of one milligram. Until recently chemical warfare strategy involved their use on the battlefield merely to supplement conventional weapons, as in the First World War. However, if their use for mass destruction were widespread, their effects would be catastrophic and it could be argued that nuclear retaliation was inevitable, and therefore a treaty banning their manufacture and use would be possible. At present, there is an impasse between the United States and Soviet Union at the 40-nation talks on chemical disarmament in Geneva. At this point, Dr Inch says in his article in the current issue of Chemistry in Britain, The Journal of the Royal Society of Chemistry, difficult technical problems of verification would arise, which the chemical and pharmaceutical industries could help to solve: how to halt the development, production, stockpiling and retention of the supertoxins or the simple compounds that produce them. With some substances, control would be relatively easy, such as the nerve gas sarin, which has solely a military use. But other substances, such as hydrogen cyanide, have legitimate civil uses - in industry, for instance. Similarly, while it might be straightforward to ban the shells and missiles that deliver chemical weapons, the fact that they could also be delivered by such simple means as crop-spraying aircraft posed difficulties. In his article, Dr Inch lists some of the supertoxins and also refers to other chemicals which, while not necessarily lethal, are devastating in their ability to incapacitate people. Some can produce blistering and bleeding, sensation and hallucination at low dosages. Dr Inch describes the problems of controlling these non-

US approves nuclear sale to Argentina

The Reagan Administration has approved the sale of 143 tons of "heavy water" to Argentina for its nuclear reactors despite the fact that the Buenos Aires Government has not signed the nuclear non-proliferation treaty and refuses to open its atomic facilities to international inspection. Although American officials insist the heavy water could not be used for the production of nuclear weapons, the decision coincides with growing speculation in the US and Western Europe that Argentina may soon be in a position to explode a nuclear device. The heavy water is owned by West Germany, but US approval of the \$100m (£66m) sale was necessary because it was produced by the United States. Until recently, West Germany owned the water jointly with Britain, but Britain sold its share to Germany before the present deal was approved. According to US officials, no attempt was made to obtain approval for the sale by the Nuclear Regulatory Commission (NRC) as has generally been the case in the past. NRC's approval was not required under US law because the heavy water is owned by another country. However, NRC officials have privately expressed concern about the deal. Argentina has one of the most advanced nuclear industries in the Third World and has insisted on its right to stage peaceful nuclear explosions, although it has consistently denied any intention of producing nuclear weapons. It is currently in the process of building an unsecured reprocessing plant that could produce weapons-grade plutonium, but that plant will not use heavy water.

20 YEARS OF TIME-SHARE Hapimag Rent-Free Holidays Anywhere at ANY Time of the Year - For Ever. 1963 - 1983. HAPIMAG - is the ULTIMATE Time-Share Club because Hapimag is different. Instead of becoming an owner of a specific week in a specific villa or apartment, Hapimag Time-Share Owners enjoy the use of over 1,100 apartments and chalets in 41 resort locations in: Austria, Denmark, France, Finland, Greece, Germany, Italy, Spain, Switzerland, Sweden, and the US. This means that Hapimag Time-Share owners can holiday at ANY time of the year and choose their apartment size (2-6 persons) or even have two or more apartments if they want which is ideal for groups of friends. Also if you cannot get away at all times it is not necessary to worry as holiday apartments can be booked for up to 8 years. Conversely, if you are busy and need a quick break, then book your Hapimag Time-Share holiday at 60 hours' notice - with Hapimag life so easy. Hapimag Rent-Free Scheme A Hapimag has wholly-owned developments in locations in all Europe - all resorts in Italy, Austria, Germany and Switzerland. Seaside locations on the Aegean, Adriatic, Italian and French Riviera, Spain and the Balearics; the Canaries; the North Sea; and the Baltic; Country Locations in Italy, Germany, Sweden and Finland. Hapimag has 100 million Swiss francs (23m), and there is a 30 year successful track record to rely on which makes Hapimag a very solid and secure investment. Hapimag is safe and secure - there are well over 20,000 Time-Share Owners, paid-up assets exceed 100 million Swiss francs (23m), and there is a 30 year successful track record to rely on which makes Hapimag a very solid and secure investment. Why Time-Share and Why Hapimag? Time-Share means renting a holiday home for a few days a year, usually - by eliminating rent, Hapimag means flexibility, choice, security, ease of re-selling as well as a part-time vacation for you, your family and your family's family - it has to make sense. At least take the trouble to find out why this amazing success story is so amazingly successful; contact: GOMSER International Ltd Dept. TM, Fairview Rd., Timperley, Cheshire. B.P.T.A. MEMBER

# Council concern grows as rent arrears reach record levels

By David Walker, Local Government Correspondent

Councils are owed record amounts in unpaid rent and housing managers are increasingly worried by arrears which in some areas total as much as 15 per cent of rent income.

In Newcastle upon Tyne, arrears grew by 27 per cent between March, last year, and March, this year, and in Birmingham, they are estimated at £10m out of total rent income of £142m. In Liverpool, traditionally an area with high arrears, the figure is more than 11 per cent of rent income - down from the record 15.5 per cent in 1981-82, when a prolonged strike by typists threw the system into disarray.

Some of the worst arrears have accumulated in London, where recent sharp rent rises were in the words of one housing manager the "last straw" for many tenants. During last year arrears in Newham increased by 80 per cent. At the end of the year, arrears in London totalled more than £80m.

An unpublished survey prepared for the Association of London Borough Housing Officers found that, by the end of last year about 300,000 tenants in the capital were in debt to their council landlords.

In the Labour-controlled borough of Lambeth, 30,000 of 45,000 tenants were in arrears last winter; half of Camden's tenants owed back rent. The problem is not confined to Labour areas. One third of Harrow's tenants were in arrears and 24,000 of Wandsworth's 38,000 tenants. Both boroughs are Conservative-controlled.

The report, written by Mr Jim Draper, of the Housing department, depicts a crisis, which has probably worsened since the survey was carried out. In the North-east and North-west a comparable picture has emerged from inquiries by *The Times*.

In Newcastle upon Tyne, where rents have been increased by more than the retail price index, arrears amounted to 9.9 per cent of rent totals in 1981-82, but were 3.7 per cent by the end of 1982-83. These figures relate to present tenants; a further £500,000 is owed by people who have since moved out.

A council official pointed to the growth in long-term unemployment in trying to explain the rise; the government's new housing benefit system for low-income tenants introduced in April appears to have made no difference to the problem.

Birmingham City Council blamed the sharp increase in arrears last autumn on a decline at a local Department of Health and Social Security office which delayed payments of benefits.

According to Mr Draper's report on London, which draws on evidence from all the boroughs, the big growth of arrears has little to do with the absolute level of rents but rather with recent increases which since 1980 have pushed rents up by more than 70 per cent.

● Birmingham City Council has recruited a private debt-collection agency to try to track down tenants who vanish leaving behind large arrears. The decision was taken after the council had to write off £2m in unrecovered rents last year.

# Koo Stark fails to reveal anything

Miss Koo Stark's Australian television debut last night on the *Parkinson Show* was described by Brian Courtis, television critic of *The Age* newspaper in Melbourne, as almost "the non-interview of the decade".

The programme, in which Miss Stark was interviewed by Michael Parkinson, was shown on Channel 10 at 9.30pm.

One of the conditions for the interview was that it would not cover her private life, particularly her relationship with Prince Andrew.

# BBC service for computers

By Bill Johnstone, Electronics Correspondent

The BBC is expected to begin regular transmission of programs for home computers from next month. Its teletext service, Ceefax, are required to "link" the program from the Ceefax broadcasts, will be made available.

The program will be free to the user but the Acorn adaptor is expected to retail for about £200, the dozen or so programs available will be charged every two weeks.

In the future computer programs testing pupils' attention to a specific school broadcast may be transmitted on Ceefax for use by teachers on school computers.

This new market of "teletextware" is being investigated by several companies prepared to offer a similar service on cable television.

The home computer software division of the company has been writing and testing the programs for Atari, Commodore, and Texas Instrument machines, which include educational ones as well as video games, would be "pumped" down cable and the home computer, connected to the television, would select a program suitable for the particular computer.

# Nuncio cautions Pope's 'double'

The Vatican has not given permission for a Merseyside policeman to impersonate the Pope at charity events, and would not be likely to if asked, a spokesman for the Pope's representative in Britain said yesterday.

Police Constable William Bird, of Litherland, was seeking clarification yesterday of the Vatican's official view of his striking resemblance to the Pope, and whether it approves at his using the resemblance to raise money for charity.

He had a letter from a senior Vatican official after he sent off photographs of himself in copies of papal robes his wife made for him. It said "The Holy Father wishes you to know that he appreciates the sentiments which prompted you to write to him and thanks you very much for the photographs. He invokes God's blessing upon you."

Photograph of PC Bird, aged 50, a Roman Catholic and a policeman for 26 years, were published in newspapers and charity organizers asked him to make appearances. But then a statement from the Vatican denied that the Pope had given permission.

Yesterday Mgr Luigi Ventura, a spokesman for Archbishop Bruno Heim, the Papal Nuncio in Britain, said: "The Vatican has not given permission for Mr Bird to impersonate the Pope."

As far as I am aware Mr Bird has not formally requested permission to impersonate the Pope. If he makes an official request to do this it would be considered, but I feel it is unlikely that it would be granted. It is a question of good taste."

PC Bird said yesterday: "I never claimed that I had official approval. That was how the newspapers and television interpreted the letter I received from the Vatican."

He said he would try to communicate with the Vatican through the Archbishop of Liverpool, Mgr Derek Worlock.

# Football clubs given stiffer crowd rules

By Kenneth Goeling

The 92 Football League clubs were given yesterday a list of crowd control measures to be put into effect from the start of the new season next Saturday. Clubs will face strong disciplinary action if they fail to implement the mandatory measures.

Welcoming the recommendations, which include strong emphasis on forward planning, on the control of alcohol sales in grounds, and improved liaison with the police, Mr Neil Macfarlane, Minister for Sport, said that spectator violence was "an unacceptable problem that besets our national game".

A liaison group including government departments, the football bodies, British Rail, and the Association of Chief Police Officers drew up the present recommendations after being set up in 1981 to work with the Spanish authorities to try to prevent crowd trouble at the World Cup finals in Spain last year.

The most important aspect of the guidelines is that for the first time clubs will be ordered to take certain crowd-control measures. Others are strongly recommended.

There are nine mandatory measures. Clubs must: Make adequate arrangements to segregate rival supporters. Undertake detailed liaison with the police, the opposing club, and rail and coach operators at least 10 days before a match to determine movement of spectators and arrangements (in case of FA or League Cup matches consideration must be given to replay arrangements). Ensure that terraces are kept free of objects that could be used as missiles.

# Three still critically ill after crash

Three people were still critically ill yesterday after a National Express coach in which three people died (Tim Jones writes).

Two of the dead were named as Mrs Annie Phillips, aged 52, of Swansea, and Mr Patrick Jean Barbis, aged 35, from Paris. Those critically ill were Mr John Lyons, the lorry driver, aged 30, from Cardiff; Mrs Catherine Roche, aged 60, from Northolt, Middlesex; and Joanne Anston, aged 14, from Bristol.

Mr Paul Morris, aged 27, a builder, and his French-born wife, Chantal, aged 26, were coach passengers injured in the crash, and they described it from hospital yesterday.

Mr Morris said he saw the lorry "coming up the other dual carriageway in the other lane. Then the wheel just exploded underneath the driver; it blew out, and I saw the tyre disintegrate. The lorry spun round, turned 30 degrees and came straight towards the barrier."

# Radiation check after fire

Scientists are checking for radioactive contamination after a fire at the Atomic Energy Research Establishment at Harwell, Oxfordshire. The fire broke out late on Tuesday night in a laboratory containing radioactive uranium and plutonium. Checks so far have proved negative, but damage is estimated at more than £10,000.

Mr Harry Cole, spokesman at Harwell, said the small amount of uranium involved was only mildly radioactive.

# Suicide outcry man wins appeal

The who was told by Judge Richards that he wanted would be suicides to "show more efficiency" yesterday won his appeal against a one-year prison sentence. It was amended to two years' probation.

The Court of Appeal said that not all the evidence had been available last month when Marcus Moseing, aged 26, was sentenced for forgery, deception, and burglary. Moseing had attempted suicide on several occasions.

# Murder charge man remanded

James Mason, aged 31, of Ashton-in-Makerfield, Greater Manchester, was remanded in custody until Tuesday by magistrates at Wigan yesterday charged with murdering David Moore, an insurance salesman, whose body was found in a sleeping bag in Cumbria last Saturday.

Mr Mason's wife Valerie is already on remand until Tuesday charged with Mr Moore's murder.

# Physics A level at grade A for girl of 12

Ruth Lawrence (below), aged 12, who becomes the country's youngest university student in October, learnt that she had passed yet another examination.

The girl, who has never been to school and had three A levels in mathematics in the top grade, has now passed physics, and again at grade A.

She also achieved a grade one in the special paper of the examination. Her father, Mr Harry Lawrence, a computer consultant, of Birkby, Huddersfield, West Yorkshire, said: "We are particularly delighted with this as it was a very difficult paper."

# Airlines likely to scrap Atlantic standby

Standby air fares across the Atlantic are expected to be scrapped by a new accord between airlines, likely to be announced this weekend (David Hewson writes).

They will be replaced by a low-price winter advance return between London and New York for under £250, while other transatlantic air fares are likely to rise by between 2 and 3 per cent.

Pan American Airways blocked the move at a session of the International Air Transport Association last week, and the fares are to be voted upon by the association's 55 members who are expected to endorse them.

# British Airways, British Caledonian, and several American airlines have already supported the new fare structure. Even with the increases, transatlantic fares will be rising more slowly than the rate of inflation, a British Airways spokesman said last night.

Pan American said that it would be abstaining from the vote but expected change the new fares.

# House prices show 5% increase

By Baron Phillips, Property Correspondent

House prices rose by almost 5 per cent in the second quarter of this year, the largest three-monthly increase in four years, the Abbey National Building Society said yesterday.

The society says the rise signals a return of market confidence, but predictions of a price boom probably overstates the position. "Words, they may run the danger of becoming self-fulfilling prophecies by encouraging sellers to add, say, 10 per cent to the price of their home because of rumour or speculation," the society said.

According to the Abbey, the average cost of buying a home is now £27,428, more than £1,200 higher than in the first quarter of this year.

On these figures, the annual rate of increase in house prices is just under 10 per cent, its highest for two years. But the society has given a warning against further sharp price rises this year because most buying is undertaken in the first three months.

Southern England has led the way in price increases, although Wales reflected the largest quarterly rise with the cost of buying a home advancing by almost 8 per cent. Average price rises in the Greater London area were 7.5 per cent; the South-east recorded an increase of just over 6 per cent.

It now costs an average £40,446 to buy a home in the Greater London area compared with £20,718 in the East Midlands, the area with the lowest prices in Britain.

First-time London buyers have had to increase their advances by more than £1,250 to £25,775.

The cost of house-buying in Northern Ireland fell by more than 3 per cent in the second quarter of the year and, according to the Abbey, prices are almost 6 per cent lower than a year ago.

Abbey says that the highest annual increase has been seen in East Angles, where prices rose by almost 15 per cent followed by the North at 14.8 per cent. In the South-east, the society indicates that prices have risen by 14 per cent.

The average price of an acre of farmland in Britain has risen above £2,000 for the first time, according to a report published yesterday.

# British Rail promises streamlined service and to reduce its costs

By John Young

A highly optimistic assessment of the future of British Rail in contrast to the gloomy projections of the recent Serpell report, is put forward in the British Railways Board's corporate plan for 1983-88, published yesterday.

The plan envisages no drastic changes in the size of the rail network, proposing a reduction of only about 1,900 track miles. Instead, it predicts an increased volume of passenger and freight traffic, which, combined with manpower reductions of 17,000 and other productivity gains, will much reduce the need for government grants.

The aim of the plan is to take the railway out of recession through increased volume and improved labour and other productivity, leading to a reduction in real terms of the cost to the taxpayer, it says.

The board said yesterday that it expected to move into profit from 1985 onwards, with group profits of more than £90m by 1988.

For the current year it estimates the railways' operating losses at £960m which, offset by a public service operation (PSO) grant from the Government and local authorities of £943m, leaves a deficit of £17m.

But by 1988 it expects to have reduced the losses of £639m. Assuming a PSO grant of £708m, that would leave an operating surplus of £69m and, after taking other activities into account, would be translated into a consolidated profit of £93m.

The plan bases its assumptions on the expectation of big improvements in customer service and competitiveness, operational and administrative efficiency, and labour productivity, including a further reduction of 17,000 jobs.

It avoids the question of future fares but says that "growth in passenger volume must be won in a highly competitive market by improving product quality and per-

formance and through marketing initiatives". Railway investment is expected to increase by half in 1985 over the present level of about £300m. There will be a big recovery of the backlog of maintenance and renewal of infrastructure over the next five years, the plan says.

There will be much investment in main line, suburban, and provincial rolling stock renewal and improved stations.

The board emphasized that, although the ending of passenger services on the Settle-Carlisle route was a firm decision, it proposed to keep the line, apart from the Rippledale-Appleby section, open for freight. No decision had yet been taken on the closure of Marylebone station in London and the diversion of services into Paddington.

The plan is said to differ from those of previous years in that it contains only those projects that the board believes have a high probability of achievement within the five-years of the plan. An early start on a 10-year programme of electrification, beginning with the main line from King's Cross to Newcastle upon Tyne and Edinburgh, remains a priority.

For commuter services in London and the South-east, the aim is to keep the average level of cancellations to below 1.5 per cent and for at least 87.5 per cent of trains to arrive within five minutes of their schedule.

Conversion of the disused tunnel of the former Manchester to Sheffield railway into part of a new road link between the two cities is technically feasible, a report published by the Joint Centre for Land Development Studies of Reading University and the College of Estate Management says.

On the freight side, the board intends to withdraw the loss making Wagonload system, and to concentrate on the Speedlink and Freightliner services. Level crossings will continue to be modernized as quickly as local authority consultation procedures permit.

As against the drastic cuts in route mileage suggested in the Serpell report, the plan proposes a reduction of only about 1,900

track miles, described as no longer essential to the running of the railway. Of the other 600 track miles proposed for closure, amounting to 382 route miles, about a third are out of use and another third carry freight only.

That leaves a balance of 66 route miles with no intermediate stations (see inset), and 49 miles of regular passenger services being considered for closure. The latter comprise 30 miles between Ribbleshead and Appleby on the Settle to Carlisle line, and the lines between Marylebone and Northolt junction and between Henley-in-Arden and Bicester junction.

The board emphasized that, although the ending of passenger services on the Settle-Carlisle route was a firm decision, it proposed to keep the line, apart from the Rippledale-Appleby section, open for freight. No decision had yet been taken on the closure of Marylebone station in London and the diversion of services into Paddington.

The plan is said to differ from those of previous years in that it contains only those projects that the board believes have a high probability of achievement within the five-years of the plan. As against the drastic cuts in route mileage suggested in the Serpell report, the plan proposes a reduction of only about 1,900

## Bar massacre driver charged

The scene at the Inland Motel at the base of Ayers Rock in central Australia after a lorry driver who had been refused a drink drove his 120-tonne juggernaut into the bar.

Two men and two women killed immediately and a fifth person died later in hospital in Alice Springs, about 250 miles to the north-east. More than a dozen people were injured, some seriously (Tony Dubou-dia writes).

The driver escaped in the confusion.

but some hours later the police using Aboriginal trackers, arrested an Alice Springs man aged 36 at a construction camp. He was charged with four counts of murder.

Yesterday the "road train" - the name given to the super juggernauts used in northern Australia - which had ploughed 90ft into the motel, was still embedded in the wreckage. Many people were crushed by the lorry which was hauling three fully-laden trailers. "The place has been almost

demolished. There was blood everywhere", a police spokesman said.

The rescue operation was hampered by heavy rain and the distance to the nearest hospital at Alice Springs. The injured had to be flown there by the Royal Flying Doctor service.

A witness said that the lorry started its run at the motel from 109 yards. "From what I could gather some people saw it coming and tried to get out of the way", he said.

## Queensland crisis forces election

From Tony Dubou-dia, Melbourne

The National Party-Liberal Party coalition which has ruled Queensland for 26 years has ended and Mr Johannes Bjelke-Petersen now heads a minority National Party government.

The Premier announced yesterday that Sir James Ramsay, the State Governor, had accepted the resignation of the seven Liberal Party members of the Cabinet. When they were first submitted on Monday Sir James rejected the resignations on the advice of Mr Bjelke-Petersen.

The Premier, an ultra right-winger who has led the coalition for 15 years, is expected to name six National Party backbenchers today to replace the Liberals. Mr Bjelke-Petersen is expected to announce the date for a state election on Monday and observers believe that he will opt for October. It is unlikely that the state parliament will meet before polling day.

Mr Bjelke-Petersen predicted that his party would emerge as the only true anti-Labour party in Australia.

"There is no government or party in power other than the National Party in Australia that's not a socialist government or with a socialist background or policy. We are the last front against the forces of socialism", he said.

The Queensland crisis began two weeks ago when Mr Terry White, then Minister for Welfare Services, and seven Liberal backbenchers crossed the floor and voted with the Labour opposition. Mr White was dismissed by Dr Llew Edwards, the Liberal Leader. In the ensuing leadership battle Mr White became party leader after Dr Edwards stepped down.

## Nigeria puts off polls in two states

Lagos (Reuters) - Nigeria has postponed tomorrow's senatorial elections in two volatile western states amid continuing protests over previous polls.

A statement yesterday by the Federal Electoral Commission said that elections would go ahead as planned in 17 of the country's 19 states. Voting will be put off in Ondo and Oyo, where violence broke out after allegations of ballot-rigging in gubernatorial elections last Saturday.

Disturbances resumed this week after results showed surprise wins both in states for President Shugu Shagari's National Party of Nigeria.

No official casualty figures have been released but unconfirmed reports mention several deaths in clashes between demonstrators and police. At least seven people died on polling day.

Oyo and Ondo were formerly held by Mr Obafemi Awolowo's Unity Party of Nigeria which has its power base among the Yoruba people who dominate the states.

The Electoral Commission said Oyo's senatorial voting would be put back to September 10 after recommendations by the State Electoral Commission. "In view of the fact that the office of the Federal Electoral Commission together with all election materials were burnt down, all further elections in Ondo state are postponed until further notice."

The commission's property, including polling booths, has been a prime target for demonstrators protesting against the results. The electoral body appealed for peaceful voting.

## Tamil chief murdered by rivals

From Our Correspondent Colombo

Splits and rivalries within the Tamil guerrilla movement in the north of Sri Lanka surfaced after the killing of Mr Oberoi Thavan, the leader of the Tamil Liberation Army, in Jaffna by members of another group.

Posters have appeared calling on supporters of Mr Thavan to return cash and jewelry estimated at 600,000 rupees (£18,000) allegedly stolen.

The police have offered rewards of 30,000 rupees for information leading to the arrest of left-wingers. Mr Rohana Wijeyewera and Mr Uptissa Gamaarachchi, both of the Peoples Liberation Front, and Mr Vasudeva Nanayakkara, the leader of the Equal Society Party.

## Sham engineer on crash ship

Singapore (AFP) - Albert Evans, a Briton, was fined about £470 here for using a false certificate of competency to become chief engineer on a drilling ship which caused a cable car accident last January, killing seven people. Mr Evans pleaded guilty.

His ship, the Eniwetok, was being towed from a Singapore shipyard when her superstructure hit cable car wires causing two cable cars to plunge 200ft into the sea.

## Two executed

Abidjan, Ivory Coast (Reuters) - A founding member of Ghana's ruling Council, Joachim Amartei Kwei, and an ex-serviceman, Johnny Ransford Dzandu, were executed at dawn for the murders of four judges and a retired army major in June last year. The death penalty on a third man, Lance-Corporal Samuel Amedeku, was upheld but he has escaped to Togo.

## Mystery blast

Washington (AP) - A loud explosive noise rocked a computer operations centre at the Washington Navy yard minutes after a bomb warning was received. No bomb was found and there was no apparent damage or injury.

## Hijackers jailed

Seoul (AP) - Six Chinese citizens charged with hijacking a Chinese airliner to South Korea were sentenced to jail terms ranging from four to six years here. China has repeatedly demanded their return.

## Guard surrendered to Gelli's 'magnetism'

Geneva (AP) - The Swiss guard who helped Licio Gelli to escape from a Geneva jail on August 10 was yesterday re-manded in custody for another three months.

Mr Raymond Foex, the states prosecutor, told a Geneva court that an international inquiry confirmed that the grand master of the outlawed P2 Masonic lodge had continued his flight by helicopter after being driven across the French border to Annecy, about 25 miles from Geneva.

Mr Foex said there was no doubt that several accomplices were involved but Mr Alain Farina, for the defence, said that his client was Signor Gelli's sole helper.

Mr Farina said that the guard, Mr Edouard Ceresa, who is 30, and who had admitted receiving about 20,000 Swiss francs (about £6,250) from the Gelli family for his role in the escape, "had succumbed to what is termed the 'magnetizing' personality of the Italian."

NICE: Two Italian policemen were on their way to Monaco yesterday after reports that Signor Gelli might have fled by helicopter to the principality after his escape.

## Vietnam accused of repression

Among the new arrivals are the 1,600 inhabitants of two villages, Phum Lam Veng and Phum Prey in Siem Reap province. During their three-four day journey to the border, they saw no Vietnamese troops.

For the first time in years, Cambodians are coming to border areas by boat. Some 300 have just landed in the extreme south-west from where they walked to a front stronghold at Sokh San in the mountains opposite the Thai province of Trat.

Guerrillas guide most of the people on the move to the encampment just east of the Thai border, which is the military headquarters.

The newcomers' statements cannot be independently verified but they are giving consistent accounts of Vietnamese repression. They speak of Vietnamese night raids on villages to arrest people accused of supporting the resistance, of the destruction of property, of theft, physical mistreatment and rape. The say that entire villages are being forced to move again and again presumably to disrupt help to the guerrillas.

## 10,000 Cambodians flee to Thailand

From Neil Kelly Ampil, western Cambodia

At least 200 Cambodians a week are making their way through monsoon rains to the Thai border to escape what they claim is unprecedented repression by Vietnamese occupation troops.

More than 10,000 people have come to bases of the non-communist Khmer People's National Liberation Front, which includes former Khmer Rouge regime Pol Pot, since the repression began in late May.

Among the new arrivals are the 1,600 inhabitants of two villages, Phum Lam Veng and Phum Prey in Siem Reap province. During their three-four day journey to the border, they saw no Vietnamese troops.

For the first time in years, Cambodians are coming to border areas by boat. Some 300 have just landed in the extreme south-west from where they walked to a front stronghold at Sokh San in the mountains opposite the Thai province of Trat.

They speak of Vietnamese night raids on villages to arrest people accused of supporting the resistance, of the destruction of property, of theft, physical mistreatment and rape. The say that entire villages are being forced to move again and again presumably to disrupt help to the guerrillas.

Recent arrivals separately reported that the two most senior Cambodian officials in Siem Reap province, Mr Chan Seng, the chief of the province, and Mr Neou Sam, chairman of the military organization, had been arrested because of their membership of an underground network.

Mr Phin Bonn, aged 38, said that he was chief of Phum Lam Veng village in the Chhlong Kal district of Siem Reap Province. He had been one of 50 people in his village imprisoned by the Vietnamese for helping in the resistance. He was arrested in his house at night, blindfolded.

## Kenya gang robs bus passengers

From Charles Harrison Nairobi

A party of 21 Italian tourists, travelling in three minibuses, was attacked by an armed gang in northern Kenya this week.

The five-man gang, travelling in a stolen Mercedes Benz car, overtook the minibuses on a lonely stretch of road 60 miles north of here. They fired a shot through the window on one bus and robbed the Italians of money, watches, cameras and valuables.

The gang then drove off at high speed, but overturned their car a few miles away. Police later recovered some of the stolen property from the abandoned car, but the gangsters escaped.

An official of a tour company here said the group had flown from Milan and were travelling to Samhuri game reserve. One of the Italians suffered bruises, but there were no serious injuries.

The incident is the latest in a series of highway robberies worrying tour operators here.

## Dissident says he was CIA spy

Moscow (Reuters) - Valery Repin, an imprisoned Soviet dissident, said in an interview published yesterday that he had spied for the Central Intelligence Agency (CIA) and managed a network of agents and informers.

Mr Repin, who managed the Leningrad branch of an aid fund for political prisoners, told the weekly Sovetskaya Kultura that he now felt he had been a traitor to his homeland and a victim of Western propaganda and subterfuge.

He was convicted of treason and anti-Soviet agitation at a trial last May and sentenced to two years in a labour camp - a very mild punishment for Soviet standards - after a courtroom confession.

The fund Mr Repin administered was set up by Aleksandr Solzhenitsyn.

In the interview, Mr Repin said the fund was a front for the collection of espionage material and for paying off a string of informers who provided him with anti-state documents or information.

Mr Repin, who managed the Leningrad branch of an aid fund for political prisoners, told the weekly Sovetskaya Kultura that he now felt he had been a traitor to his homeland and a victim of Western propaganda and subterfuge.

Averting a satellite war

Russia offers freeze in space

From Richard Owen, Moscow

President Andropov took the initiative on arms control yesterday by imposing a moratorium on anti-satellite weapons in space provided the United States does the same.

During a meeting with a visiting delegation of Democratic Senators, Mr Andropov said that the Soviet Union assumed the commitment not to be the first to put into outer space any type of anti-satellite weapon.

According to Tass, Mr Andropov told the Senators that Moscow wanted a complete prohibition on the testing and deployment of all space-based weapons designed to hit targets on Earth.

proposal covered not only the elimination of existing anti-satellite systems but also a ban on development of new ones.

Diplomats said the initiative was a step in the right direction, but had little to do with the central issues in either the medium-range missile talks or the Strategic Arms Reductions Talks (Sart).

During the meeting, senator Patrick Leahy of Vermont told Mr Andropov that there was widening distance among both Democrats and Republicans over Soviet arms activities.

to gain superiority over Russia at a time of tensions, Mr Andropov said.

"The Americans will also feel the difference between the situation which existed before the deployment and that which will take shape after it," Mr Andropov said ominously.

He did not, however, spell out Russia's likely response or put forward new proposals on medium-range missiles.

maned station and an agreement with the Soviet Union to ban space weapons (Reuters reports).

"A bold space programme can produce large scale benefits for the American people in the form of new products, new services and increased productivity," he said in a statement to mark the twenty-fifth anniversary of the National Aeronautics and Space Administration.

It was doing so, he said, to have a free hand to implement the full-scale plan of the Pentagon to build up the American chemical arsenal.

Weinberger for Central America

From Our Own Correspondent Washington

Mr Casper Weinberger, the US Defence Secretary, will underscore United States commitment to military involvement in Central America in a three-nation tour early next month.

His presence at a time of intense concern about the build-up of the American military in the region will serve to emphasize that the Administration is determined not to scale down its long-term presence.

Mr Weinberger will visit Panama, El Salvador and Honduras. Panama is the headquarters of the US Southern Command, El Salvador is the principal theatre of America's anti-leftist policies, and Honduras is the site of huge US military manoeuvres that will last until next January.

He confirmed that the US has no plans for a significant increase in its self-imposed ceiling on the number of advisers in El Salvador.

In familiar style, Mr Weinberger was low-key about his forthcoming visit. He said he would be looking at the "important exercises" in Honduras, speaking to various officials of the host countries and seeking the points of view of US troops.

There is growing alarm about the supposed passage of several Soviet-block cargo vessels towards Nicaragua, supposedly laden with arms for the Sandinista regime.

US reconnaissance aircraft have spotted a Soviet cargo vessel in the Caribbean, and according to the Pentagon it is loaded with arms for Nicaragua.

● GUATEMALA CITY: General Oscar Humberto Mejia Victores, Guatemala's new military ruler, has said he intends to lead the country towards constitutional rule while continuing a struggle against imperialism.

● SAN SALVADOR: El Salvador's 60-member Constituent Assembly voted unanimously to ban all armed groups outside the Army, including both leftist guerrillas and right-wing death squads (Reuters reports).

Family reunion: Mr Nkomo and his wife together again at their Bulawayo home.

5,000 welcome Nkomo in Bulawayo

From Stephen Taylor, Harare

Mr Joshua Nkomo returned to his political stronghold of Bulawayo yesterday with a message of peace and received his most enthusiastic welcome since his arrival from Britain on Tuesday.

The midday arrival of the Patriotic Front leader at the modest suburban home which he fled five months ago was met by an estimated 5,000 supporters, many of whom had waited since dawn.

Mr Nkomo reportedly said that in Ndebele: "We must pull together to make our nation one. If there is conflict we cannot settle it by killing each other."

Although welcomed in Bulawayo, his return is a virtually ignored by the press

and broadcasting media in Harare. A leading article headlined: "Dr Who?" in the semi-official Herald newspaper yesterday declared: "The Government would be shooting itself in the foot if it so much as called on him to account for his actions in London."

"He is desperately trying to regain the limelight. Or become a martyr. Dr Nkomo should be ignored as the spent force that he is."

After indicating on his return that he had proposals for a new initiative to repair relations between the Patriotic Front and the ruling Zanu (PF) Party, Mr Nkomo's performance in Parliament on Wednesday was being seen yesterday as a thorough let-down.

A Government spokesman said Mr Nkomo had not met Mr Robert Mugabe, the Prime Minister, since his return and there were no plans for talks.

Mr Nkomo was driven the 300 miles to Bulawayo because all flights were fully booked yesterday morning. He was met by his wife, Johanna, who was held under effective house arrest after being prevented from leaving Zimbabwe to join him in March.

Mr Nkomo has also been spending time with his daughter, Thandive, and Mr John Ndlovu, his son-in-law, who was arrested after his flight and held for three months during which he was beaten up and his jaw and ribs broken.

Israeli soldier killed as rockets hit camp

From Robert Fisk, Beirut

Israeli troops have been attacked again, far behind the new front line, that they are building for themselves in southern Lebanon. A short barrage of Katyusha rockets - apparently fired by guerrillas near the Israeli-occupied town of Rachaya - killed one Israeli soldier and wounded three others when the missiles landed in a military camp a mile from Major Saad Haddad's south Lebanese "Capital" of Marjayoun.

The rockets were fired over a wide trajectory, some exploding 30 yards from a position manned by Norwegian troops of the United Nations force.

The Israeli camp outside Marjayoun is the largest, logistics and supply base in southern Lebanon. Palestinian guerrilla leaders in Damascus have often spoken of their desire to shell it.

Reports from southern Lebanon said that Israeli troops had closed all roads in the area and were searching a region at the foot of Mount Hermon near the Hasbaya river in the hope of finding the missile launcher.

The dead soldier, Corporal Yosef Cohen, aged 40, brought to 517 the number of Israelis to have been killed in Lebanon since Israel's invasion in June last year.

Meanwhile Israel's imminent withdrawal from the Shouf mountains was discussed yesterday between President Amin Gemayel of Lebanon and Mr Osama el-Baz, Egypt's principal envoy to Lebanon.

Mr el-Baz said that Israel's partial pull-back to the Awali river should not be allowed to create a de facto partition. "The positions and military fortifications Israel is building behind the new front line in the south do not suggest a temporary presence," he said.

Press group protests to Turkey

By Edward Mortimer

The closure of two of Turkey's leading newspapers by the military regime has drawn a protest from Mr Peter Gallingier, the director of the International Press Institute.

Thürnscher, the leading conservative paper, was banned last week, and this week it was the turn of the moderate Milliyet.

Both have been shut indefinitely without any official explanation.

It was understood, however, that in the first case the regime objected to a critical article written by Mrs Nazli Ilıcak, one of Turkey's best known right-wing journalists, and in the second to articles by Mr Nefiz Tokar, a former independent senator.

Both writers were urging the Government to take a liberal line in allowing new parties to be formed for the November elections. So far only parties encouraged or approved by the military regime have been able to register.

In letters to President Kenan Evren and to Mr Bülend, the Prime Minister, Mr Gallingier says IPI is dismayed by the closing of Milliyet.

He said he had estimated that Iraq would have needed between five and 10 years longer to build a nuclear bomb, a period which he argued would have been sufficient to use non-military means to prevent the development.

3,000 flee flood

Bombay (AP) - The Bhima river flooded the Hindu holy town of Pandharpur in Maharashtra state, forcing more than 3,000 people to flee low-lying areas.

The Hispanic vote Traditional crop pickers of US prepare to pick the president

From Christopher Thomas Washington

Hispanic Americans, who could have enormous political influence if they ended their interminable feuds, are watching with trepidation and wonder as United States troops pour into Central America, and that might help to unite them.

President Reagan spent a few days courting their support last week, speaking sometimes in crippled Spanish from a prepared text. By all assessments, the net result was to strengthen the overwhelming opposition of most Hispanic Americans to what he is doing in Central America.

The real fear - unrealistic though the Administration says it is - is that the US will go to war in the south, and that Hispanics will be sent back to their old countries to fight brothers and cousins.

Next to blacks, Hispanics are the poorest people of the US. Their divisions are a reflection of the conflicts and differences endemic in Central and South America.

Mr Viktor Israelyan, the Kremlin's ambassador to the Geneva disarmament committee, accused Washington of dragging its feet in negotiations here on an international convention banning chemical weapons.

It was doing so, he said, to have a free hand to implement the full-scale plan of the Pentagon to build up the American chemical arsenal.

Mr Anaya: Force behind registration drive

Mr Anaya, the most senior Hispanic official in the country, Mr Henry Cisneros, Mayor of San Antonio (both are members of the Kissinger Commission on Central America), and Mr Federico Pena, Mayor of Denver.

There are 14.6 million Hispanic Americans, nearly six million of them eligible to vote. Only about 60 per cent of those have bothered to put their names on the voting register.

The campaign will cost \$3.5m (\$2.2m), a mere drop in the ocean of money spent by politicians and causes in the US, but large by the Hispanic record.

Among Hispanics there is a widespread feeling that at last their time has come. They have elected several leaders of national standing, including

Number of Hispanics in US (1980 census):	14,600,000
Number eligible to vote:	5,500,000
Number registering to vote:	3,100,000
Number voting (estimate for 1980 residential election):	58 per cent
Main groups:	Mexican-American (Chicanos) 60 per cent, Puerto Rican 20 per cent, Cuban 10 per cent, New York, California, Florida, New Mexico, Texas, and 80 per cent Democrat (approximate estimate).
Main concentrations:	New York, California, Florida, New Mexico, Texas.
Voting patterns:	Cubans: Almost exclusively Republican. Others: Between 70 and 80 per cent Democrat (approximate estimate).
Unemployment:	12.3 per cent among Hispanics, compared with 9.5 nationally

Afghans to form government in exile

From John Earle, Rome

Representatives of three of the main Afghan resistance movements decided at a four-day meeting in Rome, sponsored by the exiled King Zahir Shah, to unite their efforts and work for the formation of a government in exile.

Mr Assef Homayon, who coordinated the meeting held in a hotel, said yesterday that it was attended by representatives of three of the seven guerrilla movements. The king, who

lives in Rome, was not present but afterwards they called on him to inform him of their discussions. According to Mr Homayon, the king told them that he did not intend to be head of any future organization, but considered himself to be a unifying element.

The three groups planned to convene soon what Mr Homayon described as a constituent assembly for a new unitary organization, which

would discuss the possibility of forming a government in exile representing all resistance forces.

In a message a few weeks ago, the King called on Afghans to unite and form one movement capable of coordinating military action against the Soviet forces and of obtaining international recognition. Mr Homayon gave no explanation for the absence of representatives from other groups.

Keep Polish sanctions going, say Americans

Warsaw (Reuters) - A delegation of US Congressmen left Poland saying that Western sanctions should not be lifted until the communist authorities introduce a human rights programme satisfying their own people.

The seven-member group met General Jaruzelski and senior ministers who made it clear they saw the sanctions as unjust and destructive to all sides.

Representative Clarence Long, the group's leader, said they had hoped to see Mr Lech Walesa, head of Solidarity but "it was intimated we would not be welcome in the country if we insisted on seeing him".

UK workforce

The workforce for the Falklands airport project would be recruited entirely from the British labour market, the joint contractors Laird/Mowlem/Arc stated. A local cook and adviser were being employed by the advance party of surveyors and geologists but this would be for only about four weeks until the main construction party arrived on October 1.

Islanders vote

Wellington (Reuters) - Sir Gaven Donne, the Queen's representative in the Cook Islands, has dissolved the assembly and set November 2 as the date for the second election this year in the self-governing Pacific islands.

Quake toll rises

Manila (AP) - The death toll from a strong earthquake in the northern Philippines on Wednesday rose to 13 as rescue workers continued clearing the rubble of collapsed buildings. At least 16 other people were injured.

Honecker goes

Warsaw (AFP) - Herr Erich Honecker, East German head of State and Communist Party chief, left here after a three-day visit during which he met with his Polish counterpart, General Jaruzelski.

Last shave

Palermo (AP) - Two gunmen shot and killed Giacomo Misseri, aged 33 while he was having a shave at a barber shop in this Mafia stronghold. His brother was killed last November.

# GOVERNMENTS INVITED

## TO SOLVE THEIR PROBLEMS

THE WORLD GOVERNMENT OF THE AGE OF ENLIGHTENMENT ANNOUNCES its readiness to solve the problems of any government regardless of the magnitude and nature of the problem - political, economic, social, or religious; and irrespective of its system - capitalism, communism, socialism, democracy, or dictatorship.

Governments are invited to contract with the World Government of the Age of Enlightenment to solve their problems on the basis of cost reimbursement after the target is reached.

1983 can be the year of fulfilment for every government.

- \* Complete confidentiality is assured.
- \* Consultations, discussions, deputations, and feasibility studies may not be necessary because every government already knows what must be achieved, and the World Government has already developed techniques to fulfil any requirement.
- \* The government will set the target, specify the stages, and determine the criteria of success at each stage.
- \* The World Government of the Age of Enlightenment will design the project accordingly and implement it.
- \* The first step will be a letter of intention from the government to the Minister of Education, World Government of the Age of Enlightenment, Seelisberg, Switzerland.
- \* The contract will be drawn up by a mutually acceptable international law firm in conjunction with an international bank.

It is hoped that every government takes this announcement in the same spirit of absolute sincerity, simplicity, and confidence with which it is being proclaimed in favour of life, happiness, and harmony in the family of nations.

"With the blessings of Guru Dev, life on earth now is on the doorstep of the perpetual sunshine of the Age of Enlightenment."

-Maharishi

This invitation to all governments to solve their problems is a wave of fulfilment of the Silver Jubilee Celebrations of Maharishi's worldwide Transcendental Meditation movement 1957 - 1983.

ISSUED BY THE WORLD GOVERNMENT OF THE AGE OF ENLIGHTENMENT SEELISBERG SWITZERLAND.

THE TIMES One of the world's poorest countries has become a chessboard where pieces are moved by powerful outside players. The 16-year-old civil war - an intricate and shifting patchwork of tribal and personal rivalries - now threatens to ignite fighting between the French and Libyan armies. The United States and anti-Libyan African countries wait in the wings

# Stand-off in the desert

## THE COUNTRY

### Hole in the heart of Africa

Chad is an area of land which has never formed itself into an effective state and now barely counts as one.

Physically, politically and economically it is a vacuum at the heart of Africa which must provide a constant temptation to meddle for any even mildly voracious regime in power in the surrounding nations.

From the rugged mountains of the far north it descends into the wastes of the Sahara desert before, from about the 16th parallel beginning gradually to emerge into savannah.

The north is very thinly populated. Covering roughly half the area of the country, it contains only a little more than 2 per cent of the population, perhaps 80,000 people. They are almost entirely nomadic Muslims.

The south is largely populated by the Sara people, of Bantu stock. They have a much more settled way of life, and having access to virtually the only arable land in the country, they produce the two main cash crops of cotton and groundnuts. They are predominantly either Christian or animist.

The unmetalled roads which link north with south are primarily the product of a bitter and divisive past, for until slavery was stamped out by the French they were essentially arteries for northern slave-traders to descend on the tribes of the south.

Habié Goukouni

Almost no working institutions of government link these two halves of a nation created by the draughtsman who arranged the map of Africa in the wake of the departing European colonial powers. The banking system has collapsed and earlier this year the Government announced a moratorium on its debts of \$75m.

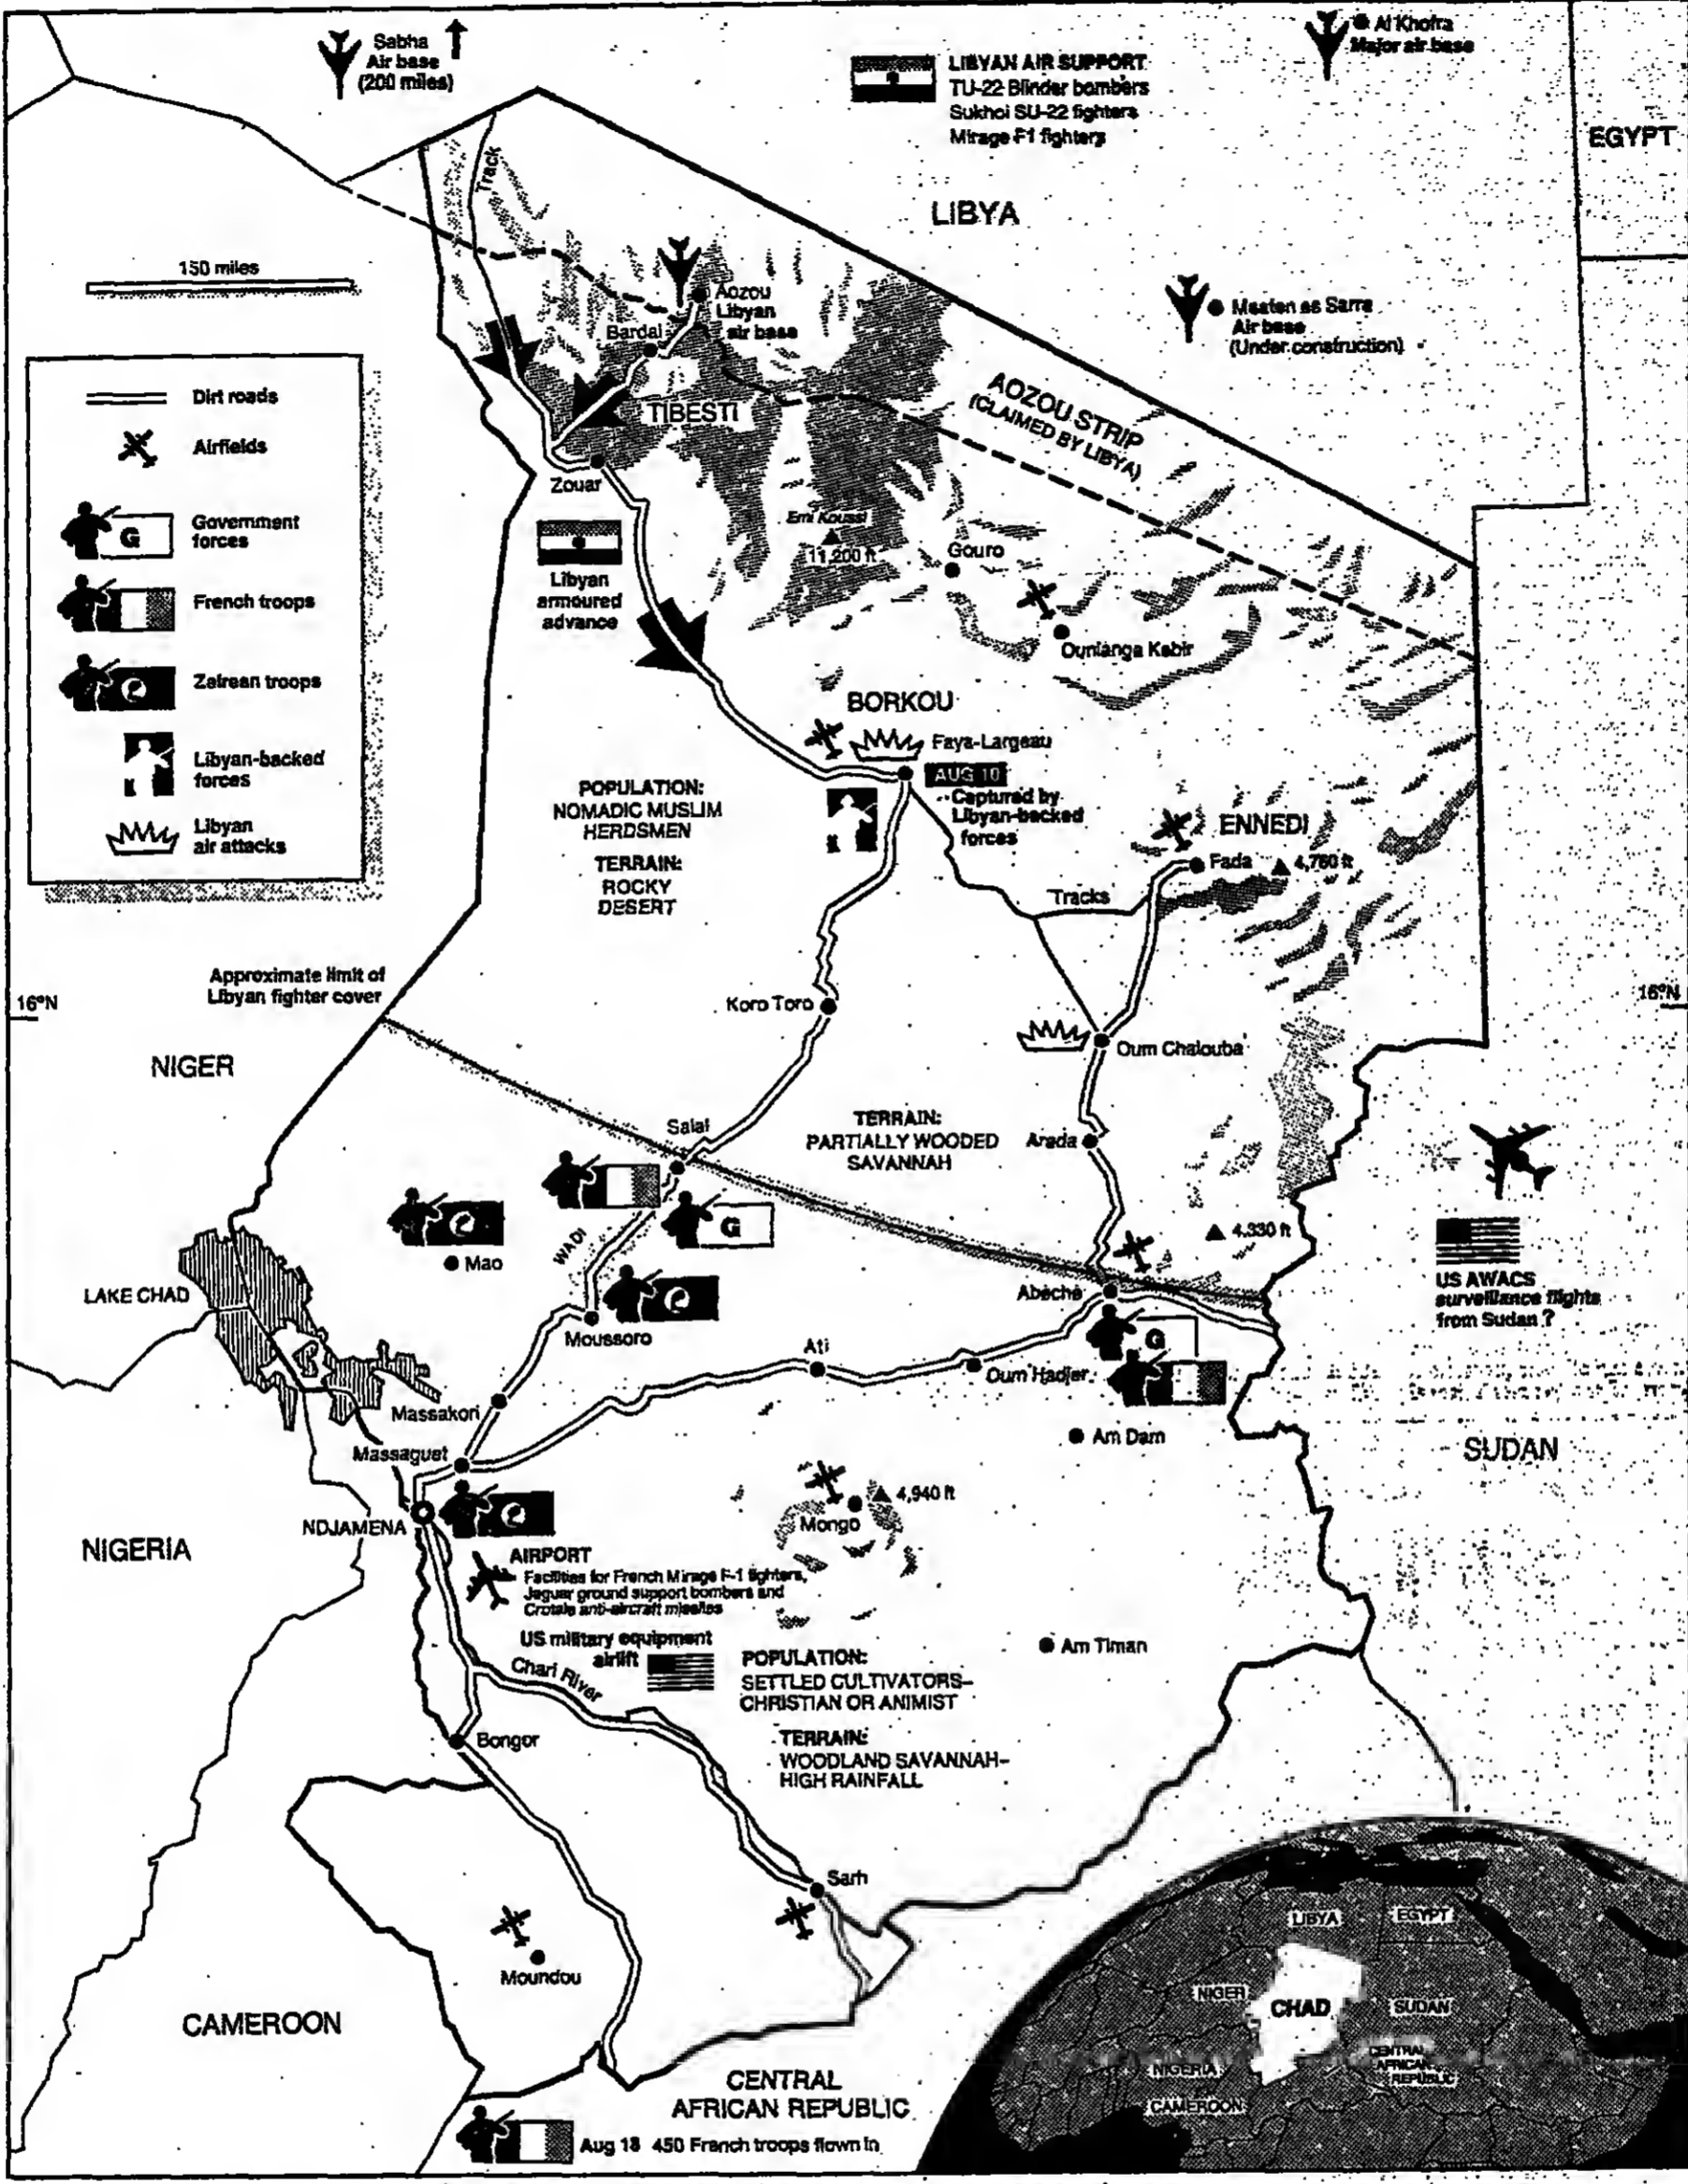

But according to World Bank statistics Chad is one of ten nations which have failed to achieve positive growth in their gross national product since 1960. And with a 2.2 per cent per capita annual average rate of decline, its record is the worst in the world.

New divisions have now arisen with the people of the north resenting the greater resources and wealth of the south. Despite this, the present struggle for power, which continues 16 years of endemic internecine warfare, is not essentially between north and south, but between two northern leaders.

These are Hissene Habré, who emerged in the mid-1970s leading northern forces in resisting the anti-Muslim tendencies of the then-government, and Goukouni Oueddei, whom he displaced as president last year. Goukouni is a son of the spiritual leader of the Toubou, the main northern tribe.

For a time they worked together in the Chad government in 1979 with Goukouni as president and Habré as defence minister. This ended with Goukouni claiming that Habré was trying to seize power with French support.

Although Libyan attitudes have wavered from time to time, it has largely, as now, supported Goukouni. Its attitude seems mainly to have been determined by the posture of the contestants in relation to Libya's claim to sovereignty over the Aozou Strip in the north, which is believed to contain uranium and other minerals, and which it has effectively controlled for a decade.

**FACTS ON CHAD**

Land area: Chad occupies an area of 490,000 square miles, which makes it about five times as large as the United Kingdom, almost ten times the size of England and more than twice as large as France. It is the largest country to emerge from the break-up of French Equatorial Africa.

Population: It is estimated to number about 4,500,000 people. These are heavily concentrated in the south, with the northern half having a population of only about 88,000.

Economy: According to World Bank statistics it had a per capita income in 1981 of \$110, which ranks it among the three or four poorest countries in the world.

Life expectancy: Its population at birth has a life expectancy of only 43 years, which is low even by the standards of the poorest nations.

Food: The average daily supply of calories per head is put at only about three quarters of the estimated requirement, and, by contrast, is only half that available in Libya.

Education: Only about 15 per cent of adults are literate, which is again among the lowest levels in the world.

Health: World Bank statistics show that there is only one doctor for every 47,000 members of the population.

**Brief recent history:** Having been part of French Equatorial Africa, Chad gained its independence in August 1960 with Ngarti Tombalbaye as its first president. For four years after independence the three northern regions of Borkou, Ennedi and Tibesti remained under French military administration.

● In 1965 rebellion broke out following the imposition of an obligatory "national loan". Since then there have been few periods of peace.

● In 1973 Libya occupied the Aozou strip which is believed to contain deposits of uranium and manganese. In 1975 Tombalbaye was killed during a military coup.

● In 1980 civil war broke out. Despite efforts by the Organization of African Unity to stabilize the situation, President Goukouni signed a treaty of friendship with Libya and this led to up to 10,000 Libyan and Islamic Legion forces entering Chad, and Hissene Habré, who had been challenging the government was defeated.

● In 1981 President Goukouni signed an agreement with Libya for a gradual merger of the two countries. This was never put into effect, but Libyan troops remained in Chad until the arrival of an OAU peace-keeping force.

## THE WAR

### Everything hangs on Gadaffi

The present military position in Chad, as shown on the map, has come about after months of extremely fluid fighting.

The story is seen in western military circles as being one of a forces of President Habré and of Goukouni Oueddei taking it in turns to over-reach themselves.

Accurate information about the fighting is scarce, but the pattern of events seems to have been that the forces of President Habré suffered a heavy defeat on about February 23 after attacking Goukouni on the fringe of the Aozou Strip, which he was intent on recovering from the Libyans.

This led to Habré's forces falling back over 400 miles to beyond Abéché, which was occupied by Goukouni's troops in early July. On July 10, Habré cut behind Goukouni to recapture Oum Chalouba and, the next day, Abéché.

Goukouni then fell back on Faya-Largeau where he was driven out on July 30, only to recapture it on August 10 in a battle which was dominated by Libyan forces.

Now President Habré's forces, together with about 1,000 French paratroops, sent by President Mitterrand technically there as advisers, and also perhaps up to 2,700 soldiers from President Mobutu's Zaire, have taken up defensive positions based on

Mitterrand Mobutu

Abéché, Salal, Moussoro and Mao.

This may hold out the possibility of a stalemate, though much will turn on the policies of President Gadaffi and his Libyan forces. An important factor in the fighting this month has been the bombing of Faya Largeau and other centres of population (most of them merely collections of mud huts at oases) using Russian-built TU-22 Blinder bombers operating from Libya.

These bombers have operated under cover of fighters, such as the Russian SU-22 Fitter and the Mirage F-1, but in the absence of forward air bases, Salal and Abéché are at the extreme limit of the range of these fighters.

The question now is whether the Libyan forces will attack Salal and Abéché, which would be expected to bring them into conflict with the French paratroops for the first time.

The position seems to be that it is essentially a Libyan decision, for the forces of Goukouni are thought to have been worn out by the fighting since February.

Although the Libyan aid to Goukouni originally took the form of men of the irregular Pan-African or Islamic Legion, it is thought that up to 5,000 regular Libyan troops have been in Chad since early this month. There have been reports that the Libyans may have with them as many as 500 tanks, but in European capitals this is thought to be an over-estimate, with the actual number being probably nearer to 100.

Any Libyan advance south will have to be confined to the two roads through Salal and Abéché, because the intervening terrain is unsuitable for modern mechanized forces. For the defending government and French forces it will be a prime aim to hold the important road junction at Abéché.

South of Salal the road passes through the wadi-Bahr-el Ghazal which probably constitutes the best defensive feature available.

moreover... Miles Kington

## Good news, there's been a disaster

Evelyn Waugh once complained that the standard of book reviewing was slipping badly. In my young days, he sighed, we never gave a bad review to a book we had not read; nowadays they are breaking even that simple little rule.

And Richard Ingrams, I am afraid to say, is now breaking that rule in the field of television, giving the thumbs down in the *Spectator* (my favourite weekly) to the conversation between John Snowhouse and Anthony Clare, even though he blithely admitted not having seen the programme. I did not see the programme either, so I am sure it was excellent, if a little inconclusive.

But Richard Ingrams promptly made amends by attacking the level of violence in TV news, which seems to feed off pictures and reports of crashes, disasters, bloodbaths, corpses and drownings. I agree entirely. He objected to the violence; I object almost more to the unnewsworthiness of it. Sudden death is horribly important to those concerned - friends, relatives, neighbours - but horribly unimportant to the rest of us. If half a dozen people are swept to their death by an Irish wave, or burnt in a Paris dance hall, or killed in a Spanish coach crash, the only interest we can possibly have is a remote voyeuristic one. Yet such "news" items are regularly given the number two or three position on news programmes.

A few months ago I met a BBC cameraman who had been working in a regional centre and been sent to cover a huge fire, of a factory, I believe. The pictures were dramatic and unusually detailed, he said. They had been offered to BBC news in London. Had anyone died? They wanted to know. No, came the answer. Not interested, said London.

Another unwelcome development on the news is the increasing interest in filming mourning relatives at funerals - widows are great and children are even better. After a token shot of the coffin or casket, the camera zooms in on the suffering faces of the nearest and dearest and stays there implacably, as if to make amends for not being there when the victim himself died. Lovely stuff. But news?

I must admit that I am committing Ingrams's sin here. I have not seen the programme concerned. In the last ten years I cannot recall having switched on the TV news more than three or four times, and I cannot believe that my life is any poorer for it; TV news seems to me to have all the impact of reading the headlines of a better class provincial evening paper. It does very little better than radio and a lot far worse, and none of my occasional dippings has made me change my mind.

Still, we never get anywhere by moralistic sounding off, so I have a concrete suggestion to make. Instead of mixing up death and violence with the real news, why not give them their own regular programmes? Why not start a weekly or even daily feature called *Private Funeral*, for which BBC and ITV cameras could film grief and distress to their heart's content, and to which those of us who love such things could turn without having to watch boring reports from Nicaragua and Chad?

The real violence and disaster could easily be given an evening slot as well, perhaps in a feature called *Blood and Guts*, where the apparent public taste for carnage could be satisfied without anyone having to pretend it was "news". Here fuller treatment could be given to those disasters which the media love, especially coachloads of happy holiday-makers and prearranged a spectacular crash to be filmed specially for television! This style of fictional documentary is becoming very popular, and it is about time we made a proper job of the disasters we love so much, instead of arriving there hours afterwards.

Rodney Cowton reports on the latest naval star at Dartmouth... a Wren

# Down to the sea in skirts

Another bastion of male excellence and supremacy has fallen to John Knox's monstrous regiment.

At the Britannia Royal Naval College at Dartmouth, home of all that is best and brightest in naval tradition, a woman has for the first time carried off one of the top awards. At the end of July, Sarah Kahn, 23, alumna of Cheshire Girls' Grammar School and Durham University, emerged as top cadet in competition with about 80 men and 13 other women who were in their first term at Dartmouth.

She won the Rowallan Trophy, which is awarded to the officer under training who displays the greatest leadership potential in his or her first term. Not only that, but she clearly did it with style, for she also won the Pauline Doyle Trophy which is awarded to the officer cadet of the Women's Royal Naval Service "showing the greatest prowess in parade ground training without losing her femininity". By "proving in parade ground training is meant the sergeant-major role of commanding a squad at square-bashing."

For the WRNS cadets, their first term at Dartmouth is also their last. They tend to be a few years older than the men at the college, mainly either from university or after serving in the ranks. Whereas the men will complete up to three terms, the women take up their first postings in the Royal Navy proper after one term - though not at sea. That remains a male preserve.

Sarah Kahn has emerged not merely as Third Officer Kahn, WRNS, but also with the awesome power (as the Americans say) to request that Tower Bridge be opened and closed, and with the thought that if her request is not met, Her Majesty's Order of Admiralty may well want to know the reason why. For in her first posting, which she takes up in October, she becomes Assistant Naval Liaison Officer in London. In that role she will be responsible for looking after the arrangements for the 30 to 40 British and foreign naval ships which visit London every year. Among other things this will mean ensuring that Tower Bridge is raised when one of these vessels needs to pass through.

Sarah Kahn is just one of a number of women making an impact in the services. On August 1 *The Times* recorded that Lieutenant Jan Harper had emerged at the top of a basically masculine course for young officers in the Corps of Royal Engineers. Nine months ago Group Captain Joan Hopkins was appointed as the first woman commander of an RAF operational station, with responsibility for the air defence of a third of the United Kingdom.

Earlier this year Squadron Leader Brenda Palmer became the first female Senior Air Traffic Control Officer at a major flying station, RAF Wittering in Cambridgeshire. Last Year Captain Marion Randall came top of an officer's course in the Royal Army Ordnance Corps.

In Second Lieutenant Sarah May, the Army has the first woman platoon commander of male Royal Army Ordnance Corps recruits undergoing basic training (square bashing, again). At Portland in Dorset on the headquarters of the Flag Officer Sea Training, the operations room has an entirely female watchkeeping team, made up of four WRNS officers and four leading Wrens.

Meanwhile, back at base in Whitehall there is Second Officer Penny Melville-Brown, who in 1981 was the first WRNS officer to come top of the mixed junior staff course at the Royal Naval College at Greenwich.

Notwithstanding any impression that may be created by these examples, they are exceptions to the basic rule that the environment of the armed services is determined by male, with the RAF having perhaps achieved the greatest integration of women. Pregnancy remains a phenomenon which none of the services finds easy to accommodate.

An interesting test of the service's attitude to women could arise quite soon. At the top of their profession, as directors of the Women's Royal

Sarah Kahn: the latest woman to make an impact in the armed forces

Army Corps and the Women's Royal Air Force are Brigadier Helen Meechie and Air Commodore Helen Renton.

After one year as director, Brigadier Meechie is still only 45, and Air Commodore Renton is only 52 after more than three years in the post. Normally appointments at this level are not held for more than about three years, and these two officers are young enough to have

the possibility of one or more further appointments before they reach the retiring age of 55.

But they cannot go further in the women's branches. The question is whether the services will break new ground by offering them senior appointments outside the female confines. Whatever happens, traditionalists may take comfort from the fact that there remain obstacles to the rise of military women.

'At the Royal Military Academy at Sandhurst the men will shortly be joined by women, though there will be only a limited measure of integration, mainly in the academic side of training. Women will have a place in the passing out parade, however, though only in part of it, for the width of their skirts limits the size of their stride and prevents them keeping pace with the men's brisk marching.'

## One happy family, isn't it, Sister?

### COMMENT

You want an accident in Windsor, said the mini-cab driver by way of light conversation: have it between me and five and reckon on surviving the trip to Slough. Time was, King Edward's would have seen you all right. Now it's falling apart. You're better off in Princess Margaret, he said. He takes them all home after Princess Margaret. Princess Margaret gives them a good time.

American Medical International Inc. of which the Princess Margaret Hospital, Windsor, is one of 10 British subsidiaries, is raking it in, and in 1982 showed a 55 per cent increase in net income, with suitably buoyant dividends for its shareholders. But let there be no misunderstanding. The Princess Margaret director is 29 years old, a tone poem in shades of grey who says "welcome to our little house on the prairie" and explains that he moved from accountancy to medicine because he prefers "the people angle to the numbers game".

No profit motives here. Absolutely not. They merely want to take the pressure off the National Health Service while providing each individual customer - or - patient with the best possible service - or - care and attention. Such imperative formalities out of the way, Sister says them to a jolly notice that says "No Smoking lungs at work", and a wisp falls into the sweet sherry.

All very cosy. Understated as the many beiges of reception, soft-lit by myriad glass ceiling nipples against the harsh light of midday. A bentwood hatless hatstand, a seepiece of leaffery and an early 1960s portrait of Princess Margaret herself who declared her namesake well and truly afloat in 1980.

One big happy family is the theme. None of your health service hierarchic separatism hereabouts; Christian names all round and you even get to speak to the consultants, who are all called mister.

So here is the path lab, and there the X-ray machine, and in here is a machine to take a picture of your baby in the womb, which makes a lovely gift for mums to start their albums with. And here is our pharmacy and there is a theatre and there is another theatre and here is the delivery room and here is some colposcope which explores somewhat modern in the uterus, we are specially proud of our colposcope, and this is a room and that is its bathroom *en suite* with lavatory decontaminated and sealed to prevent cross-infections so rift in the public sector.

And in this beige folder you will find our 14-day cycle menus. Scampi moray, fillet mignon, courgettes provencale, chickeo bas-

quaise, that sort of fare. Good food aids recovery, is the idea.

Brand loyalty has spread to the patients. In room 214, Mrs Uovwin presses a bedside button and her lacy torso rises magnificently to attention. "Wonderful!" she says, either of the electronics or her nearly bealed abdomen. But we were all so upset when Mrs Thatcher took her eye round the corner to the Princess Christian. We had a Miss Thatcher, though, in for some dentistry. Still, it was a shame. She would have loved it here.

Well, anybody would. The last time something went wrong with Mrs Unwin, before she went on the health insurance scheme, she found herself in a public ward with 60 other people and the whole place reminded her of a scene from a war disaster movie.

On the floor above, a tastefully tattooed young man takes over the commercial. He wishes it to be known that he is "very impressed".

It's not like they're doing a job, be explained, it's more like a service, like in an hotel. He'd had to wait six months to have his tonsils out on the NHS, and, when he got in, there were no curtains at the windows and great lumps of plaster were hanging off the walls. Look, he says, what it all boils down to is I don't want to walk through corridors and have to see a lot of drips going in people. I don't want to mingle with the dying. It's depressing. Yeah, his wife said. It makes you feel sorry for them. Makes you feel you ought to go and put up pretty curtains for them.

The marketing director was especially pleased I'd met a milkman's wife on my rounds. It went to prove the Princess Margaret was not just for the idle rich. Three years ago only 7 per cent of women possessed such precedence. Now, she said modestly, it had gone up to 14 per cent. However, there are beds lying empty in Princess Margaret, so much, much more marketing is required. Here is our physiotherapy department, we have a doctor in the house 24 hours a day, and over there's the delivery room and everywhere there are carpets, which is why it's all so quiet and peaceful.

Except for the hammering and banging out back. That's for an extension. You won't find too many of those in the public sector either.

## I've been left holding the baby

### FIRST PERSON

"She combines motherhood with a successful career as a barrister". "She manages to combine her computer business with bringing up four children". "She manages to do the housework and occasionally visits friends as well as copes with two children". I will give a prize of one baby wipe to the person who guesses correctly which of the above descriptions fits me.

How do they do it? I was certainly a reasonably successful career girl before I married, but that all went out the window when my first son manifested his existence. My pregnancy was so horribly sickly that working in an office would have been impossible. I used to lie on the bed trying to focus on a single paragraph of a book for hours. When the baby arrived, my clear duty was to breast-feed him. Oh Well, thought I, with feeds every four hours there

will still be plenty of time for other things. My babies, however, are obsessive feeders. They feed practically for four hours, at a time and carry on like that for months. I spent the first 16 months of my first child's life wearing clothes that buttoned down the front.

At 18 months my son started at a playgroup and I, then spent three mornings a week sitting in a dusty church hall, drinking coffee and comparing my child with other grubby infants, trying to convince myself that he was more intelligent. When he was old enough to be left and, later, when he went to nursery school, I indulged in hectic, clock-watching shopping trips, dreading long queues at the supermarket.

When my son started at "big school" friends assumed that I

would have plenty of free time. It was a strange assumption. I had by then endured a miscarriage, another grisly pregnancy and the first few months of another five-year son. Taking and collecting my elder boy meant a daily round of checking school uniforms and trying to make sure that the baby had had at least half a feed before each expedition. There was simply no time for me to pursue a career even if I had wanted to. Within a few months my baby son will be going to a playgroup - if I can find the time to take him - and life will become even more hectic. After that, no doubt, there will be Cub Scouts or Boys' Brigade for the older boy and school for the younger.

I have come to the conclusion that the only way in which one can

### MEDICAL BRIEFING

## Curing insomnia and the nightmares

of bathers become victims and need medical help.

An article in the British Medical Journal a couple of weeks ago suggested some remedies for the pain, though it was pointed out that even some strong pain killers are not always effective. Since then doctors written to the journal about their own remedies. Cornish GPs seem to have the most experience of dealing with weaver fish stings and in the letters column this week hot water is put forward as the most popular remedy.

Dr Lynn Fitzgerald, a research scientist in the department of immunology at St George's Hospital in London has been involved in one of the few studies of the effects of competitive sports on the immune system. She is herself a long distance runner and holds the women's world 100 mile, 100 km and 200 km records. With the help of medical colleagues she looked at the effect running had on herself and five fellow endurance runners.

Thankfully, she says, they found no dramatic deterioration in immune defences during a race. But she adds it appears that the runners were generally less resistant to disease during the training season. This could be explained by the extremely high levels of the stress hormone cortisol released by the athletes' bodies after a heavy training session or competition. Dr Fitzgerald now hopes to make further studies.

### Running cost

The catalogue of illness and injury among athletes at last week's world championships in Helsinki has heightened fears that modern sportsman and women may be training too hard for their own good. American 100 metre hopeful Evelyn Ashford's tragic fall in the final, and Cuban Alberto Juantorena's broken ankle add weight to the concept that the physical pounding athletes force their bodies to endure is now so great that muscle tears and stress fractures result.

Britain's Sebastian Coe didn't even make the games. He was stricken by a mystery virus. But experts are now suggesting that his illness, too, may be the consequence of over training. Could it be that the stresses of training and competition depress the immune system, leaving athletes prone to infection?

### Rabies relief

Viewers of the recent BBC TV drama *The Mad Death* (a fictional account of a rabies epidemic in Britain) may rest a little easier in the knowledge that a safe and effective vaccine for the deadly disease is available, though an outbreak here would still be catastrophic. The original rabies vaccine, produced from the nervous tissue of infected animals was usually only used to treat the disease. Paradoxically, impurities in the preparation meant that the vaccine

could also cause nerve damage though not to the devastating extent of rabies itself.

Since then, however, the French vaccine manufacturers Institut Mérieux have perfected a way of growing rabies virus in human cells. Their vaccine can simply be injected into the arm because only small amounts are necessary and its lack of side effects means it can be used both as a prophylactic and treatment.

Travellers to areas of the world where rabies is rife, such as the Indian sub-continent, can ask their GPs to get a prophylactic course for them (two shots one month apart) from Servier of Slough - they supply Institut Mérieux's product here. A course costs around £36. British Airways also provides a rabies vaccination service.

### Pool rash

A new disinfectant used in public swimming pools may be giving swimmers a nasty rash. Most public baths in Britain are chlorinated to keep them safe, but in recent years a few have started to use a brominated disinfectant. Skin experts say the product which has two brand names, Di-halo and Aquabrome, may cause eczema.

Dr Richard Rycroft, consultant dermatologist at St John's Hospital for Diseases of the Skin in London, and Dr Philip Penny, medical adviser to the Amateur Swimming Association, have seen 48 people who developed skin trouble after swimming in pools where Di-halo was used. Dr Rycroft has also received eight independent reports of similar problems from other dermatologists. And a survey of swimming magazine readers unearthed a further 65 people who developed "more than just trivial" rashes.

Olivia Timbs and Lorraine Fraser

## THE TIMES Tomorrow

START THE WEEKEND WITH THE PAPER THAT INFORMS, STIMULATES, AMUSES AND PROVOKES

THE TIMES DIARY

Dash back

Jack Dash, the firebrand orator who led London dockers through many unofficial strikes, was in congenial surroundings this week, giving evidence against plans to redevelop the Free Trade Wharf site at Shadwell.

Reeling on the isle

The Hebrides are agog to see who will partner Princess Margaret at the Skye Balls next month when she revives the claim of the Royal Hotel, Portree, to its title.

Aping royalty

The royal family's enthusiasm for homeopathic remedies is shared by an even more closely knit group - a colony of American woolly monkeys at Leonard Williams's monkey sanctuary in Looe.

● Jeremy Holt, of London, writes in to ask whether the hot weather is getting to people. He has just had a letter dated "15 Augst."

"The Minister's terribly excited. They've asked him to go with Roland Rat."

Hot and bothered

The current hot weather has revealed how little we British know about wine, and how little our restaurateurs care. At the Four Seasons restaurant in Islington I was served Sancerre rouge at hot room temperature.

● A PHSy noted a large party disembarking from a coach at the Salvation Army headquarters in Queen Victoria Street.

MOdicum

Chandrika Prasad Srivastava, secretary-general of the London-based International Maritime Organization has an official black Daimler with the registration 1 MO.

Net many of my readers count. This is a relief, since I can't either. Just two of you have written to point out that last Friday in this spot I called an octagon "six-sided".

Edward Mortimer and Hazhir Teimourian on the coup in Iran 30 years ago today

From Mossadeq to Khomeini

"I owe my throne to God, my people, my army - and to you." With these words, according to Kermit Roosevelt, the Shah thanked him, and through him the Central Intelligence Agency to which he belonged, for its part in restoring him to power 30 years ago today.

Roosevelt's exploit, recounted in his book *Counter-coup*, has become the locus classicus of a CIA coup. It was also beyond doubt a turning point in the history of modern Iran.

Now that Iran is languishing under the gruesome medieval tyranny of Ayatollah Khomeini, it is hard to imagine the atmosphere which made Muhammad Mossadeq such a demonic figure for the British press and public of the early 1950s. Mossadeq was a secular nationalist who propounded for Iran the doctrine of "negative equilibrium".

His argument was that in the past Iran had mortgaged its independence by trying to buy off the great powers with concessions ("positive equilibrium"). Instead it should safeguard independence by refusing concessions to all alike, and taking control of its own resources.

He was thus no less opposed to giving the Soviet Union an oil concession in the north than he was to the control of Iran's main exportable resource (the oil of Khuzestan in the south) by the Anglo-Iranian Oil Company. But his refusal to compromise over the nationalization of AIOC (the forerunner of British Petroleum) won him the status of Britain's public enemy number one in the Middle East.

The septuagenarian, often bed-ridden figure, proved to burst into tears in the middle of his own speeches, was the constant butt of cartoonists and leader writers alike. He was, as *The Times* obituary recalled on his death 14 years later, "prime minister and near-dictator of Persia in the disastrous period, 1951-53... the passionately nationalist statesman who, with many eccentricities of manner and method, led his country to the repudiation of its agreement with the Anglo-Iranian Oil Company, and to the very verge of national ruin".

For the Shah too, Mossadeq was "an utterly irrational being" but also - however improbably - a British agent, whereas, according to Kermit Roosevelt, "Dr Mossadeq had attempted to expel his monarch, replacing him with himself, and he had formed an alliance with the Soviet Union to achieve the result he wanted".

But for many Iranians today Mossadeq has become the symbol of an Iran that might have been and (since hope springs eternal) might yet be: modern and progressive yet independent of the West, proud of its national traditions yet free of fanaticism. Recently, when groups opposed to Khomeini came together

McGraw Hill, 1979

The Shah, backed by Britain and the United States against Muhammad Mossadeq, right - and below, Churchill, the American agent Roosevelt and the mullah who eventually overturned the western strategy, the Ayatollah Khomeini

The Shah, backed by Britain and the United States against Muhammad Mossadeq, right - and below, Churchill, the American agent Roosevelt and the mullah who eventually overturned the western strategy, the Ayatollah Khomeini

to Paris to form a united front, even royalists agreed that Mossadeq's should be the only picture hanging above the platform.

The man who insisted on this was Shapur Bakhtiar, whose premiership in January, 1979, marked a brief liberal interlude between the Shah and Khomeini. Bakhtiar, who was himself a junior minister in Mossadeq's last government, remains a staunch defender of the old man's memory. According to him, Mossadeq gave Iran "a lesson in democracy", was firmly committed to a constitutional monarchy rather than a republic, and over flirted with either the Soviet Union or the local communists.

Nor, Bakhtiar says, did he want "to throw the British out of Iran". He was willing to have a British manager for the oil company, keep on all British employees, and pay compensation for the British-built plant (though not for loss of profits). "It was Britain which showed itself

was easily filled by increased production elsewhere. Refusing to be browbeaten, Mossadeq rejected US attempts at mediation, but inside Iran, with no oil revenue coming in, the situation inevitably degenerated.

By July, 1953, Mossadeq was at odds not only with the Shah but also with the traditional middle class, represented by the bazaar and the main religious leaders, both groups that had originally supported him. To overcome opposition of parliament (the majority of whose members were landowning, wealthy merchants or religious leaders) he resorted to a referendum without secret ballot.

The *Times* believed that this was the reason for the coup against him. ("The Shah, thanks to his western education, is a warm supporter of parliamentary institutions.") But in fact the planning for it was well advanced before the referendum. The initiative had come from Britain, where Churchill was by then in power, but the CIA had to take charge. Britain, having broken diplomatic relations, could no longer get its people into Iran.

The new Republican Administration in Washington eagerly agreed, although with different motives. According to Roosevelt, "the British motive was simply to recover the AIOC oil concession. We were not concerned with that but with the obvious threat of Russian takeover."

That threat was not obvious to everyone. The Americans, then as now, were predisposed to see the hand of Moscow behind every spot of bother. They believed that Mossadeq, knowingly or otherwise, was playing into the hands of the Tudeh (communist) Party, which was closely aligned with Soviet interests.

It is true that the Tudeh grew stronger under Mossadeq's rule, and was allowed to carry on a strident campaign against the Shah and other powerful groups which were also opposed to Mossadeq. But when, after the first attempt at the coup had failed, Tudeh crowds poured into the streets, pulling down statues of the Shah, Mossadeq ordered the army to clear them out - thereby unwittingly facilitating the successful coup the following day.

If there was a communist danger it arose from the chaotic internal situation in the country, which itself was caused largely by difficulties arising from the oil boycott. As in Chile 20 years later - and, who knows, in Nicaragua tomorrow - the situation in which western countries felt obliged and entitled to intervene was one partly of their own making. The effect, while it may have encouraged Iran's economic development, was to distort its political development. In his determination to forestall another Mossadeq, the Shah prepared the ground for Khomeini.

The boycott was backed by British military power but Mossadeq was also unlucky in his timing: there was no oil shortage, and the Iranian gap

Albin Michel, Paris, 1982.

Charles McKean looks at the architectural contest with a difference

How a city shaped up to a thug and an aristocrat

By any normal standards, the competition was a difficult one: the design of a major public meeting place in a setting of European importance - the Mound, in Edinburgh. Most design competitions for projects to be built are for buildings: rarely for the spaces between buildings. Indeed, for the last 100 years, the ancient importance of the public forum, amphitheatre or agora has been devalued to that grey and unspecific term "the public open space".

The competition was for the transformation of the roadway that used to run alongside the Royal Scottish Academy (William Playfair, 1832) and thence between the RSA and the National Gallery of Scotland (Playfair, 1845). It had been determined that the road would be closed in any case, but the resulting discussions led to a realization that ever since the Quality quit the Old Town (with its traditional meeting place at the market cross) for the New Town (with no meeting place at all) Edinburgh had been without a focus.

This site could provide that focus, but not without difficulty. First, it is L-shaped; second, it is rigidly defined on one side by a boundary governed by an Act of Parliament; and third - and possibly most important - the site is entirely dominated by the two great art galleries, which are neo-classical monuments of world class; the RSA is a gigantic muscular, Doric thug, whereas its neighbour, the National Gallery of Scotland, is a refined, feminine Edinburgh aristocrat. Both buildings are overlooked by the craggy wall of the Royal Mile, and in turn look down upon Princes Street and the New Town. These constraints leave little chance for creative innovation.

Furthermore, whether competitors decided to do nothing, or the minimum, or produce a major building, all had to be contained within the budget of £500,000, barely more than that required to pave the sloping site in stone: a critical point, since the most imaginative schemes were those which exploited the changes in level.

Those who decided to submit a major building proposal had then to determine whether they respected the existing character of the site, or whether they fought it. One entrant

Space race: the winning design for Edinburgh's Mound, the area near the Royal Scottish Academy and the National Gallery of Scotland.

expressed his dissatisfaction with the project by entering a live scheme: the site plan was returned with the two galleries covered with uncooked pork chops, sausage and black puddings, with salad heaped between them. The panel members, while holding their noses (for this was an early entry, and by the time the technical assessment panel had reached it, the food had matured) concluded that the entry proposed to pile 30ft of garbage over the entire site: as such, it did not meet the competition conditions.

Submissions fell into three main groups: those who simply offered a landscape design; those who used water, or those who produced major building structures. The winning entries were all in the first category, of which more later. However, a significant number used water on the site to soften its hard, rectangular and Calvinist outlines. Such entries included ideas for fountains, waterfalls, streams, ponds, curling pools, skating ponds, ornamental gardens and wicker gardens. Most were beautifully presented, but none avoided the difficulties of future maintenance, clearance of rubbish, and whether or not the presence of water might inhibit the use of those spaces for other purposes.

However, the winning student entry - commended for its sheer panache - proposed a loch running along the entire side of the Royal Scottish Academy, satisfying the requirement for access to load and unload drawings into the gallery by a service raft.

The final group of entrants were those who proposed major building structures, ranging from reproduced Palladian villas, ruined

grottos, tents, gazebos, pergolas and high-tech metal structures to underground glazed-roofed shelters. The jury was convinced by none of these, since for the entire scheme to remain within the budget, such structures would have to be completed in cheap materials requiring significant future maintenance. In any case, the neo-neo-classical buildings rarely matched the quality of the existing ones on site.

The sponsors of the competition, the Property Services Agency and Lothian Regional Council (who together own the land), wanted to ensure that all possible opposition to the winning proposal should, as far as possible, have been eliminated in advance. So they appointed the Royal Incorporation of Architects in Scotland to act as agents to organize the competition, with the requirement that everybody with an interest in the site be consulted during the competition process, so as to avoid the possibility of the winner being opposed by the massed hands of classical conservationists. (The problems of the competition for the National Gallery extension in Trafalgar Square were very much in their minds.)

The method adopted was the organization of detailed technical assessment, before the jury meeting, the results of which were made available to the jury as guidance. The jury comprised Professor Sir Robert Grieve (former chairman of the Royal Fine Art Commission for Scotland), Professor Richard McCormack (architect), and Alistair Moffat (arts correspondent, Scottish Television, and former director of the Edinburgh Festival Fringe).

They were unanimous in their choice of the winning scheme by Allies and Morrison, of London (Allies trained at Edinburgh University). The design consists of a few simple ideas: the ground level at Princes Street is carried up into the centre of the site, and paved in stone; then, to take account of the rising ground, there is a flight of steps up to a higher platform which runs between the Royal Scottish Academy and the National Gallery, which will be paved with granite sets. The eastern boundary of the site is determined by the Playfair steps, which, as a route, is now carried right down to Princes Street, ending up through a new, pedestrianized information kiosk.

Between this route and the lower square is space for a row of shops or booths, offering permanent accommodation for the current clutter of ice-cream vans etc. The scheme is austere and pure; yet it was Moffat's view that it offered a wide variety of opportunities for the performing arts and would be in great demand during the summer season.

All that remains now is for the promoters to take the scheme to the next stage, with a view to clearing outstanding permissions and beginning construction. Once built, it will no longer be difficult for people to name a meeting place when wishing to meet friends in Edinburgh: they will simply be able to say: "I'll meet you at the Mound".

"The Mound Competition Exhibition. Upper floor, Burtons, 81 Princes St. Edinburgh: Monday to Saturday 9 am - 5 pm. August 21 - September 10, 1983.

George Walden

Reagan should go Russian

Sociology - once defined as "the science of vehement obscurity" - has spread to foreign affairs. In international sociology, too, quasi-scientific jargon masks passionate partisanship. Instead of peer groups, we have nuclear equivalence, and countries are reduced to behaviouralist automata by doctrines of strategic determinism. Some international sociologists are of the adamant right, some of the hard left. In both cases, it is the human factor which is elided.

Take the arms reduction talks in Geneva. The arithmetic of the Russians is persuasive. But there is a whole world above and beyond the nuclear facts of life. You do not have to be David Hume, or a philosopher at all, or particularly sceptical, to know that "facts" alone do not add up to much. Common sense tells us both that there can be no such thing as precise nuclear equivalence, and that there must be such a thing as a reliable efficiency of weapons on either side.

We need a greater readiness to criticize pure military reason, and to illuminate the facts with a little historical imagination. May I therefore respectfully suggest that during the summer break President Reagan might lay aside for a moment his intelligence digests and ask the CIA to procure for him instead good English translations of three Russian masterpieces? The prose alone would be an exquisite relief from 'intelligence-speak, and there could be no better briefing for an American president.

The first is Turgenev's *A Sportsman's Sketches*, the book that reportedly persuaded Alexander II to free the serfs in 1861. It explains a lot about the Russians, and new. Though many of them lived and were battered like cattle until about a century ago, they are a very human lot. (Comparisons with *Uncle Tom's Cabin* are irresistible, but misleading.) Until very recently indeed, most were peasants. The national character is suspicious, boorish and overbearing. Russians can also be sentimental, melancholy, brilliantly original and highly cultivated.

Gogol's *Dead Souls* portrays the more negative types, and is ideal further reading for any negotiator. Chichikov, the anti-hero, declines to continue a game of chess with the cheat and bully, Nozdryov. "I haven't been cheating," protests Nozdryov, "and you can't refuse to go on. You must finish the game... I'll make you play! You may have mixed up all the pieces but I'll remember all the moves. We'll put them back as they were... No sir, you tell me straight, are you going to play or not?" said Nozdryov, advancing still closer. (A parable of recent superpower relations?)

Peasants - yes, but as Turgenev shows, with a streak of poetry, too. Bullies - certainly, but also, in another guise, permanent subversives. The hero of Dostoyevsky's *Man from Underground* asks persist-

ently awkward questions (what if two and two make five?), is not inclined to listen to the answers, and distrusts any social or scientific structure at which "...one cannot put out one's tongue or make a long oase at the sky". The Soviet public still read all this in their millions, a fact the President might remember when he despairs of Muscovite officialdom.

After reading more about the Russians, the President might like to meet one, or see the country. The most prominent recent American visitor to Moscow have been an 11-year-old girl and a 91-year-old diplomat (Averell Harriman). During my own 20 years in diplomacy (spent mainly on communist affairs), I do not recall a moment when the East-West cultural gap has been greater. We badly need to put the whole of our relations in a wider and deeper perspective. They are the ones with the rigid, one-dimensional world view. We are supposed to have a broader vision.

The state of Soviet studies in America is not encouraging. Few of the next generation of American experts seem likely to bring George Kennan's depth of historical reflection to the issues. Few too will have met many Russians, though many will have strong views on them. Arid specialization and ideological intensity make a perilous mixture.

I am not a faint-hearted European and I am not apologizing for Moscow. The point is not to melt the President's heart, or to pierce his political armour. Indeed in some areas closer acquaintance with *homo russicus* might lead one to take a tougher line. To get him out of Afghanistan, for example, you need not only some historical understanding of why he went there in the first place; but also to realize that there will be no negotiated withdrawal unless somebody sees to it that the resistance is properly armed. Nozdryov would understand that.

But we must stiffen up. In Poland "the worse the better" will be the wrong motto. Uncontrolled *poussivement* in Eastern Europe could be bad for both sides. We should think in national and historical, as well as ideological terms. Even a little peasant shrewdness could help.

Moralistic oratory and technocratic diplomacy are not enough. There is no substitute for statesmanship, and the demand for it is growing. Many sensible, commonsensical people in the West are worried as much by its absence as by the unclear outcomes game - which itself reflects the failure of diplomacy. But they want leadership, not a crusade.

Harold Macmillan was not much of a nuclear expert, or ideologue. But he knew his history, and the Russians, and helped Kennedy to get the Test Ban Treaty signed just 20 years ago. He also found time to read Trollope at No 10.

The author is Conservative MP for Buckingham and a former Private Secretary to Lord Carrington.

Philip Howard

All hands to harvest the happy memories

The harvest truly is plentiful this year, but the labourers are few. Now that British farming is so thoroughly mechanized, there is no unskilled work left on the harvest field for unskilled visitors to do. We used to stoop until quite recently up here in darkest Ayrshire. Then come out the next morning to observe with chagrin that the wind from the Atlantic had blown all the stocks down, and then start again and put them all up again. Back then, our hands sing with remembered thistles even to write it. Nostalgia, nostalgia. Where are the harvests of yesterday?

After a week or two of that game, we pitchforked the sheaves on to carts, put them all back again when they couped, and rode in triumph on top of the swaying load, back to the steading, and forked all the sheaves up again into the shed. Even after the combines had penetrated the hill farms up here, there were still bales to load and unload. We sweated gravy as the sack grew towards the roof of the barn, but who things grew too hot the elevator could always be relied on to break down. Now the mechanical bale-grabbers have arrived, and vast bales shaped like Swiss rolls that oo human, however willing can lift by hand. "Dry August and warm both harvest no harm" rhymed Tom Tupper in *Five Hundred Points of Good Husbandry* in 1580. August is preternaturally warm and dry. The harvest looks quite good. But there is oozing that amateurs can do to help.

And now the polls even say that it is illegal for children to ride home on top of the loader bales, in the few farms that still build loads of old fashioned bales. There is an ancient pleasure gone.

Harvest home has been going on for a long time. And it is difficult not to feel that it has changed for the worse with the efficiency of mechanization, in the same way that it is difficult not to feel that the countryside has changed for the worse with the great prairies created by rooting out old hedges and ditches to accommodate the great machines. Your old harvest was the social and sociable event of the year, with the field full of helpers and spectators setting in the way, small boys with ambitious catapults waiting for the rabbits to make a break for it from the shrinking island of standing corn, old men reminiscing about heroic harvests of their youth, the professionals coting by scythe and then binder drawn by horse or tractor and everyone else stocking. It was sweaty, monotonous work. But you only have to look at the harvest paintings and

read the harvest poetry and memoirs to see there was a kind of joy in it.

The big machines have taken the backbreaking to out of it and are far quicker and more efficient. But they have also taken away the sense of communal triumph in getting a roaring harvest home. The drivers of the combines and the trucks wear earphones playing continual pop.

But let us not repine or hulk about the good old harvest days, chaps. New country skills are replacing the vanishing arts of stooking and scything, and huddling loads and stacks that do not coup, and thatching. At the Dumfries and Lockerbie Agricultural Show last week, there was no sheath - crossing contest over a bar as in the pole vaults. But there was a large and popular class of tractor competitions in which the local boys drove monstrous machines around an obstacle course, picked up telegraph poles with their fork lifts as delicately as lesser men pick up chipolata sausages with a fork, backed between narrow gate posts, and deposited their loads without milking a drop water from the milk churns balanced on their trailers. I made my excuses and did not have a go.

Farming will ever be wholly mechanized as long as there are animals down on the farm. The new imported big breeds, the Limousins and Simmentals, and Charolais (famously called Charlies up here) made a noble show at Dumfries beside the local Galloways and Ayrshires. The hills are alive with the sound of heeling lambs for we have been spanning the flock, separating the lambs from their ewes and dipping the best ones primrose yellow for the markets.

Visiting townies overcome their modesty about lifting up the grotty tails of several hundred lambs to determine their sex: out always as obvious as you would imagine at that age. They call a rig (a male with only one testicle) a "chaser" up here, let his tail grow as a badge of distinction and keep him as an energetic curiosity to encourage the ups in their work. One falls into the dipping tank in over-enthusiasm and comes out yellow. The Notting Hill Beagles are always in the way, and majestically cursed.

Who was it who said that you cannot make a man by standing a sheep on its hind legs but by standing a flock of sheep in that position you can make a crowd of men? Compared with the flock of silly tourists on the London Underground, the wild sheep of darkest Ayrshire are civilized and sedate and bright yellow.

P.O. Box 7, 200 Gray's Inn Road, London WC1X 8EZ. Telephone: 01-837 1234

## THE SOVIET CHALLENGE: II

A major fallacy in Western assessments of Soviet intentions is to assume that the Soviet leaders are basically similar to politicians in any country. In Western democracies politicians come and go; the electorate prefers pragmatic government which benefits citizens as individuals rather than the enforcement of ideological solutions for the good of the state. In the USSR continuity of leadership is all-important. The legitimacy of the regime has no firmer foundation than the seizure of power in 1917 by a minority party which promised a glorious future for mankind after world communism was attained - an "inevitable process" which the party nonetheless had a duty to accelerate.

Individual Soviet leaders have been denounced - some even murdered - by those who took power from them. But Lenin, his body preserved in the Mausoleum on which his successors review their forces, lives on as the main inspiration of Soviet foreign policy. Previous leaders may have made mistakes, but the party and the doctrine must be regarded as infallible or six decades of Soviet rule and all the sufferings of the masses building socialism will have been in vain. Even if they have personal doubts about the wisdom of spreading their political system by all the means at their disposal, the men in the Kremlin dare not give expression to their misgivings for fear of losing power to their rivals.

Continuity is particularly noticeable in Soviet foreign policy. The imperialism of the Russian tsars has given way to a Soviet empire expanding under the guise of bringing socialism to the workers of the world. This is one aspect of their predecessors' rule which new leaders have not condemned. The same Khrushchev who de-Stalinized and freed thousands of political prisoners preserved Stalin's conquests, crushing the Hungarian rising and executing Prime Minister Imry Nagy for "treason". When he backed down in the Cuban crisis of 1962 he lost his post. The same Brezhnev who in the heyday of detente drank champagne with President Nixon and kissed President Carter presided

over the suppression of the Prague Spring, expanded Soviet influence in Third World countries with the help of Cuban forces, and ordered the invasion of Afghanistan.

The Andropov who is portrayed by some as a liberal intellectual pursuing a defensive foreign policy was himself in Hungary helping to suppress the 1956 rising and as head of the KGB from 1967 played a central role in the Brezhnev strategies of internal repression and foreign expansion which continue today under his own leadership. The head of the Central Committee International Department, Boris Ponomarev, and the Foreign Minister, Andrei Gromyko, both have decades of experience, uninterrupted since they began their careers under Stalin.

The present Soviet leaders have caused too much misery to be described as good men; yet their misdeeds stem not from personal wickedness, but from their obedience to a system unrestrained by popular control, a system which has brought them honours and privileges. They are not the men to renounce the beliefs of a lifetime or to recant on their aims of achieving world communism under Moscow control. The younger careerists who hope to become the leaders of tomorrow provide the information and advice which conform to the Kremlin world view, not original ideas about reaching a peaceful compromise with the West.

It is not fully realised in the West that the Kremlin's unchanging and unquestioning hostility is not only directed at the negative side of life under capitalism but also at the positive freedoms and consumer delights which exercise such a dangerous fascination for those under communist rule. This is not the traditional threat of a hostile nation seeking self-aggrandisement, but the threat of a system which compels human beings to suppress their human qualities in the service of a political machine. Just as the democracies failed to believe that Hitler meant what he said until he proved it with Blitzkrieg and concentration camps, many now prefer to listen to what some smiling Soviet official tells

a Western journalist rather than believe the doctrine of the leaders themselves or the evidence of their own eyes.

They argue that Afghanistan was already a socialist country in the Soviet sphere of influence; that its people were very backward and will benefit from education in the USSR and other forms of fraternal help. They say that Nicaragua suffered under a brutal dictatorship and is better suited by Soviet-style socialist development than the evils of US economic exploitation. If Cuba too has political prisoners, they represent temporary sufferings on the path to a greater good. It is argued that one cannot make an omelette without breaking eggs. But the road to world communism is thick with broken eggshells and we have yet to see the first omelette.

The West cannot afford to wait for the next time Soviet strategists seize an opportunity to extend the "socialist community" - whether in Iran, Baluchistan, or elsewhere. A feeble reaction to the use of force is no deterrent to its use on another occasion. So far the West's response has generally been delayed, divided and ineffective, yet on the occasions in the past when governments have weighed the risks and opted for a firm stand, they succeeded in restraining the USSR. In 1946 after strong Western pressure Soviet troops withdrew from northern Iran, and the pseudo-autonomous Kurdish and Azerbaijani republics set up by Moscow collapsed. A firm line proved justified during the Berlin airlift of 1949 and the Cuban crisis of 1962. The West helped Tito counter Stalin's threat to Yugoslavia and more recently the promise of support encouraged Egypt and Somalia to reject the Soviet presence.

It is time to develop a coherent response to the Soviet challenge. Of course both sides must make every effort to scale down the monstrous weapons which threaten global destruction. But it is no less important to preserve those values of decency and freedom which further the best interests of people everywhere and in the long term hold most promise of a secure and productive peace.

## FIVE-YEAR RAILWAY TIMETABLE

Few commercial organizations of any size could have kept to a five year plan drawn up in 1978, nor would many care to publish such detailed plans now. Yet British Rail, as a state industry, was forced into this somewhat academic performance again yesterday. Its past efforts, as the Comptroller and Auditor General has pointed out, have made its commuter timetables seem a model of accuracy by comparison, not least because of the recession and strikes. It is just as hard for railway managers to monitor their complex and inter-linked mix of social and commercial businesses as it is for the Department of Transport.

Today British Rail is committed to forecasts for the year 1988, when it does not even know who will be its chairman next month, nor whether the government will approve important projects for main line electrification, let alone what schemes Whitehall advisers have in store for railway organization or for introducing private capital.

Under such conditions of uncertainty, it is hardly surprising that the Corporate Plan 1983-88 is little more than a discussion document and a

modest one at that. A further 17,000 jobs will go and labour productivity will rise by just 7 per cent. Of the two largest divisions required to run on commercial terms, freight is expected to meet its target but inter-city services on the other hand will only break even, though British Rail hopes that a study now under way will find the missing profits.

This package, while hardly dramatic, is both logical and credible. British Rail has made substantial strides recently in getting to grips with its problems and re-organizing its structure so as to give its managers realistic financial and operating targets. The Corporate Plan adds to this new realism by concentrating on cost savings without exaggerated hopes about an upturn in business.

There is still a lingering feeling at the back of many minds that the railways could do without massive subsidies if only they were run efficiently or that there is some magic way of transforming railway finances in much the same way as duty-free sales pay for the losses incurred in running airports. Real planning can only begin when it is acknowledged

that large parts of railways are uneconomic but essential to a pattern of living created over past decades.

Tight control of subsidies and the external financing limit remains the prime method of keeping pressure on British Rail to improve its efficiency. Subsidies should be as specific and detailed as possible. But there is also a strong case for experiments to introduce private capital and in particular some element of competition where possible to act as a monitor for British Rail's performance on finance and services and to help provide investment.

Important strategic changes, such as splitting off parts of the system or separating track from operations should certainly be considered. Private enterprise could help a more imaginative approach to property development on stations. If possible private concerns should be encouraged to run separable commercial lines, such as the new Victoria to Gatwick line and even to tender for subsidized routes. But such moves should concentrate on improving rather than sniping at the railway system.

## CONGRESSMEN ON THE FALLS ROAD

American politicians have been playing Irish politics since the days of the great famine. Mostly they play at home. For the last few weeks they have been playing away in the fortified stadium of Belfast. The local reception has been decidedly mixed.

First there was the Noraid tour of anniversary disturbances, enjoyable even to being participatory. That was followed by the appearance of three Congressmen, variously interested in job discrimination against Roman Catholics. Their stated purpose was fact-finding with contingent threats - to fine the parents of American subsidiaries in Ulster, or to block a U.S. contract with Short Brothers for the supply of aircraft. The quality of the investigation may be gauged from the person of the principal investigator, Father Sean McManus of the Irish National Caucus, an inveterate opponent of the preservation of Ulster's British identity, and the American of all Americans with whom the tender objectivity of an Irish fact would be least safe.

It would be surprising indeed if the impact of religious and political discrimination were not

to be found on the pattern of employment in Northern Ireland. There is a long and well evidenced history of it. A tendency to de facto segregation in housing has been reinforced in recent years by naked fear in some urban areas. And there is in progress in that society something resembling a suppressed civil war.

The surprising thing is not that active discrimination may be found but that there is not more of it. Up and down the province Protestants and Catholics work side by side, even in the sad tale of the meat factory at Moy. The Catholics in the workforce would not work if the Union Jack was flown. The Protestants would not work if it was taken down. The factory could not operate without the cooperation of both, so the management shut it down. What could be less discriminatory than that?

The Fair Employment (Northern Ireland) Act of 1976 is a far-reaching statute to make unlawful every kind of religious or political discrimination in employment. The Americans have good experience of the efficacy of such enactments. Congressmen

will know that they are an earnest of intention on the part of the political authorities; that they have some exemplary and educational effect; that they are powerless instantly to eradicate stubborn ways or instantly transform disparities into parties; and that to bite they need the tooth of enforcement.

Northern Ireland's Fair Employment Agency has reasonable powers of propagation, investigation of practices, conciliation and ultimately enforcement through the courts. It also issues "equal opportunity" certificates to employers who satisfy its requirements, and the British government looks for the certificate in examining tenders for government contracts. Short Brothers have an agreement with the agency to take positive steps to encourage applications for vacancies by Roman Catholics (a result not easy to achieve in a factory sited in the heart of Protestant East Belfast). Fair-minded American legislators and executives should have no difficulty in concluding that, if the aeroplane's specifications, price and delivery are right, the labour practices that produced it need not be held against it.

## Saving Mr Steel from his friends

From Mr Colin Darracott

Sir, Your report (August 17) that David Steel may resign the leadership of the Liberal Party if the constitutional amendment on control of the manifesto is passed by the Liberal Party Assembly quotes unnamed "friends" of his as evidence.

The media, and the party journal, have recently been awash with Mr Steel's "friends" and "friends of Mr Steel's" "friends" making allegations of this nature whenever these matters are discussed. They have preferred to take refuge in dark hints and veiled threats, rather than to honestly discuss the issues involved.

These issues, quite simply, are how a democratically-run party, the first to elect its leader by the votes of all members, shall arrive at the content of its manifesto. The effect of the amendment would give final authority to the standing committee of the party, of which the leader is a member.

Thus if the leader strongly disagrees with an item of party policy he would no doubt be able to persuade the committee to omit it from a manifesto. If he could not, he would hardly be likely to be able to convince the electorate on the point. But he would have to argue his case, be heard to argue, and give his reasons. Thus the rest of the party, who perhaps not agreeing with him, would at least know why he had taken a position.

This is very different from the present case, where policy on, for example, animal welfare and cruise missiles has been brushed aside apparently by personal dictate.

It would also spread responsibility for the manifesto's content, and spread the range of party opinion which contributes to it. This year, all the discontent about the programme for the recent general election has fallen on Mr Steel. If the whole of an elected body were involved that responsibility would be spread, and the main debate could be on issues and not personalities.

Those of us who support this amendment wish to openly debate the issues it raises. In the absence of any word from Mr Steel himself, "friends" would do well to join that debate and to abstain from childish threats.

Yours sincerely,  
COLIN DARRACOTT, Chairman,  
London Region Liberal Party,  
The Liberal Centre,  
30 St James Road, SE16,  
August 17.

## Future of the Alliance

From Mr Peter Birky

Sir, Philip Webster (article, August 10) seems to have been talking to people who see some sort of divergence between David Owen's views on candidate selection for the European elections and those of SDP members at grass roots level. This is an analysis not borne out by my own experience. I believe that joint selection would be in the interests of neither the SDP nor the Liberal Party.

With joint selection the vast majority of candidates selected would be Liberals, not necessarily because they were the best candidates, rather because they had the backing of people who party loyalty had developed over years and decades. Liberals would tend to vote for Liberals far more than Social Democrats would vote for Social Democrats.

The two suggested methods of joint selection would have the same results. If all members were invited to a meeting Liberals would outnumber Social Democrats by an average of three to one, and unless the SDP candidate was head and shoulders above the rest the result would be a foregone conclusion.

If an electoral college was set up, so that equal numbers voted from each party, the result would be the same, due to the relative strength of party loyalties.

Most Liberals, I believe, accept these arguments only too well. When factions of the Liberal Party met the Association of Liberal Councillors, which was once hostile to the SDP, suddenly reverse their positions, they let the cat out of the bag.

Those Social Democrats who favour a quick merger also realize the implications, but are prepared to pay the price. The vast majority of Social Democrats, however, I believe will not be prepared to pay the price and will say so loud and clear at the council in September.

To project an Alliance which was nothing more than an extended Liberal Party could mean that we all suffer the same fate as the Liberal Party of 1979.

Yours sincerely,  
PETER BIRKY,  
32 Park Grove,  
Bradford, West Yorkshire,  
August 10.

## Missing the point

From Squadron Leader R. G. Burr (Read)

Sir, An example of the type of notice referred to by Mr Yorke in today's issue, (August 9) was an inscription which up until the formation of the NHS appeared chiselled into a stone band around a hospital on the edge of Clapham Common. It read: "The South London Hospital for Women Supported by Voluntary Contributions."

However, I noticed at some time after 1948, that the word "Women" had been removed and the word "for" had been extended by the addition of "merely", which saddened me somewhat.

Yours faithfully,  
R. G. BURR,  
7 The Slade,  
Lamberhurst,  
Kent,  
August 9.

## LETTERS TO THE EDITOR

### Doubts on new policy for the Rhine

From General Sir David Fraser

Sir, In your article, "Rethink on the Rhine" (August 17) you propose:

1. That the West German Army assume responsibility for the operational sector of Allied Command Central Europe now entrusted to the British Army.

2. That the British Corps in Northern Army Group should be "held as a tactical reserve" and should, in some way to be determined, be reduced in size.

3. That Headquarters, British Army of the Rhine, should be abolished "with further savings in headquarters costs", at least I think that is what you propose, in your reference to "no one-over-one relationship between HQ BAOR and HQ First British Corps", although since you link this point to the likely loss (under your policy) by Britain of the Northern Army Group Command - a completely different issue - the line of reasoning is unclear.

I believe the advantages you suggest for this sort of policy are illusory, while the difficulties are very real. You have referred to some of the latter but, I suggest, greatly underestimated them. To take a few headings:

**Financial:** You base your suggestions upon the need for savings. I doubt if you would achieve them. There would, under any version of your plan, have to be large-scale relocation of troops - presumably British and certainly German. The cost of this is likely to be immense; and it is a presumption of your proposition that Germany bear a larger part of this cost. But, leaving aside the dubious question of persuading the Federal Republic to support the cost to the British defence budget, would also be huge. I very much doubt if these capital costs could be balanced by any imaginary savings from a reduction in size of 1 (British) Corps.

**Strategic:** You refer to there being "no operational logic in the strategy of forward defence in West Germany, which is persisted with for political reasons, and you talk of the 'tactical rigidities imposed on NATO's military thinking by the forward defence strategy', and of the British Army 'guarding every forward inch of a sixty-three kilometre front'. If it really did so, it does not seem an immense price to pay for peace in Europe, but does West Germany population could be persuaded to pay for a defence

policy which did not assume forward defence of its territory?

Does The Times seriously contend that any Western European nation - or coalition - has the ability to trade space for time, and base its declared strategy thereon? Or that Nato could live with a military strategy so patently at odds with its political objectives? The "tactical rigidities" - and they are not as rigid as you suggest - are political realities. Of course there are other problems, but the problems are not insuperable.

**Political:** You argue the advantages of West Germany assuming a stronger military role. I believe you entirely underestimate the difficulties of this - not least in Germany itself. But why do you suggest to your readers that the West German contribution is not already very strong? The Bundeswehr has four powerful Army Corps, a very large reserve, and - when I last compared the figures - more tanks than the German Army which invaded Russia in June, 1941. Talk of a "junior partner" (in terms of land forces, at least) is misleading.

Space prevents comment on the administrative implications of your proposals, but suffice it to say that all the national and logistic responsibilities of HQ BAOR could not possibly be discharged by the staff of a Forward Corps.

Finally, may I say that my own experience of Nato convinces me that any proposals on the lines you suggest would be regarded with astonished concern within the Alliance. The British Army of the Rhine - with much of it in the forward areas - is exactly that "evidence of commitment" without which no Continental alliance could endure. No British participation would be respected. You make much of "operational burden sharing", and so that connection say that the British contribution should be concentrated to the maritime area. I agree - and it is. Virtually the entire Royal Navy is assigned to Nato - by far the largest European navy, and rightly so. Our contribution on land - one Corps of regular troops, from a nation of over sixty million people - I believe me, not regarded by our allies as overwhelming in terms of size, but it is regarded as extremely important.

Yours faithfully,  
DAVID FRASER,  
Vallders,  
Isington,  
Alton, Hampshire,  
August 17.

### Buildings on the list

From Mr Richard J. Griffith

Sir, The remit of the new Historic Buildings Commission is wider than your editorial (August 11) suggests. Its principal task is "to secure the preservation of ancient monuments and historic buildings situated in England".

The 400 buildings directly in its care are only the tip of the iceberg - even if we added all grade I listed buildings they would together amount to fewer than 6,000 properties, or barely 2 per cent of all buildings over which there is statutory "heritage" control. That total is about 283,000 buildings and will soon be substantially increased by the survey now in progress. The Commission can advise the Secretary of State on the administration of all these protected buildings.

### Saving youth hostels

From Councillor L. J. F. Preddy

Sir, It is one of the present day ills that in an age of increasing leisure time available, especially to young people, the Youth Hostels Association should be recording a decline in membership and overnight stays. This has reached the point where remote hostels are no longer economic and may have to be closed.

Whilst Youth Training Scheme labour can continue to be used for the maintenance of these hostels, more importantly the Government should be encouraged into introducing a scheme providing for the issue of vouchers to young people who

take part in the Youth Training Scheme for substantial reductions in the costs of overnight stays at hostels.

This could be introduced on either an individual or a team basis as part of a reward system. No doubt British Rail with their more flexible marketing policy could be associated with the scheme to provide reduced rate rail travel.

The primary objectives of the Youth Training Scheme would, therefore, be extended on a wider basis with wider benefits.

Yours faithfully,  
JOHN PREDDY, Deputy Leader,  
East Sussex County Council,  
12/14 Broad Street,  
Seaford, East Sussex.

### Body and mind

From Dr Thomas Price

Sir, Your editorial of August 10 ties the medical profession to task for its alleged over-emphasis on high technology, high cost medicine.

Few doctors would dispute that the indiscriminate prescription of powerful and expensive drugs is an unsatisfactory practice. The alternative however is to utilise that even more costly and scarce resource - time.

We should all welcome the opportunity to spend more time with our patients but this may not be possible where revenue cuts and delays in appointing replacement staff have led to ever increasing waiting lists.

In the field of rheumatology,

chronic disease is the rule rather than the exception and time spent explaining the nature of their condition to patients is worth a thousand pills. There are still, however, sixty districts in this country which have no rheumatologist and around ten million people therefore who are denied the accurate diagnosis and skilled treatment that their ailments demand.

Your criticism should rather be directed at Government policies. Repeated cuts in expenditure are continuing to deny too many citizens the care and attention they deserve.

Yours faithfully,  
THOMAS PRICE,  
38 Flanders Road, W4,  
August 12.

### Engineering awards

From Dr G. B. R. Feilden, FRS

Sir, On behalf of the Fellowship of Engineering and the Commissioners of the 1851 Exhibition, I am preparing as comprehensive a list as possible of United Kingdom engineering awards. This will include medals, sponsorships, scholarships and exhibitions, studentships and fellowships, and prizes in every branch of engineering and related technologies.

The list will be published by the Fellowship as an indexed reference book in the autumn of 1983.

The list will contain the replies we have had from schools, colleges, universities, polytechnics, institutions and charitable trusts, as well as those from many firms manufacturing engineering products.

The sponsors of the list believe that it will fulfil a need in informing both those who are already in the engineering profession and those

contemplating entering it, of the immense range of awards which exist.

Yours faithfully,  
ROBERT FEILDEN,  
Greys End,  
Rotherfield Greys,  
Henley-on-Thames,  
Oxfordshire,  
August 9.

### One swallow

From Mr David Lilley

Sir, "My father was so enchanted with it that he shot it" (August 10). What is one to make of this extraordinary statement - and of the act itself which deprived the bird of its life and the world at large of a "rare and lovely creature"? *Crime passionnel* or murder most foul?

Yours faithfully,  
DAVID LILLEY,  
49 Blake Road,  
Bicester, Oxfordshire.

### Risks in new bread rules

From Dr Walter Yellowlees and others

Sir, We write to draw attention to the proposed new flour and bread regulations, particularly to the following two points:

1. Around 1935 the deficiencies of white flour were recognized. Regulations were passed making it mandatory to put back certain of the vital nutrients extracted during milling, eg, iron, calcium, thiamine and nicotinic acid. It is now proposed to abandon this requirement.

Either the Government was wrong then or it is wrong now. White bread is a staple of the poor. If the Government interferes with the nutritive value of the white loaf, it should be warned of the risk it takes with the health of the poor and elderly sections of the population.

It is known that the thiamine requirement is directly related to the carbohydrate intake. It is Vitamin B1 needed to cope with starch. David Furnham, a biochemist who has worked with the Department of Health, has said that 85 per cent of the elderly population will probably have a lower intake of thiamine than the DHSS recommended intake if thiamine is not replaced.

Doyle and Crawford have said that 62 per cent of the mothers in families they are investigating in London will be at risk if thiamine is not replaced.

2. The proposed new regulations will allow bakers to manufacture a wholemeal loaf to which they have added the emulsifiers, oxidants, stabilizers, etc. at present allowed in the manufacture of white bread. By long tradition, and indeed by law, wholemeal bread has consisted of the ground-up wheat berry, yeast, salt and a little oil or fat, with caramel permitted.

If the large plant bakers now wish to cash in on the fashion for wholemeal bread, by all means let them, additives and all. Far better people eat wholemeal bread with additives than white bread with additives. But they must not be allowed to call it "wholemeal". The public must be able to distinguish between a loaf which contains additives and one which does not.

The old bakers' term "wheatmeal" is due to be abolished under the new regulations. Why not present it to the plant bakers as a name for their new loaf? "Wheatmeal" for a wholemeal loaf with permitted additives, "Wholemeal" for the traditional wholemeal and nothing but the wholemeal?

The McCarrison Society is disquieted by the new proposals for two reasons: (1) the Ministry's manifest failure to recognize that the purpose of food is nutrition and that a staple diet has a pivotal place in the building of healthy bodies; and (2) the unobtrusive way in which these proposals have been put forward, with opinion from the trade invited, but with no information at all issued by the Ministry to the public - who are, after all, those mainly concerned.

Yours faithfully,  
WALTER YELLOWLEES,  
President,  
ANDREW STRIGNER, Chairman,  
KENNETH BARLOW, Editor,  
The Carrion Society,  
76 Kenney Street, W1,  
August 3.

### Cut in arts support

From Mr Denis Mahon, FBA

Sir, Mrs Rupert Hambro justifiably argues (August 11) that in the present circumstances of stringency more should be done to enlist financial support for the arts from the private sector and points out that mere recommendations from the Government to this end fail to meet the case.

There were only two sentences relating to future arts policy in the Conservative manifesto issued in May. They were: "We shall keep up the level of Government support, including a fair share for the regions. We shall also examine ways of using the tax system to encourage further growth in private support for the arts and the heritage." Leaving aside any comments on the ways in which the first commitment might be reconciled with events during July, it is evident to many that the second commitment becomes all the more crucial just because of those events.

Unless something is actually achieved in the way of further fiscal incentives, exhortations are unlikely to prove really effective. But provided that genuine progress in this regard is seen to be made, then Mrs Hambro's suggestion of a "well-coordinated public relations campaign" would become extremely pertinent.

There have been certain indications that the new Arts Minister may have been thinking seriously along these lines. Many will hope that in the autumn he will do battle for, and deliver, the necessary prerequisites for a constructive policy designed to win from private sources much greater support in the future for the arts and the heritage.

Yours faithfully,  
DENIS MAHON,  
33 Cadogan Square, SW1,  
August 11.

### Luis Buñuel

From Professor Douglas Johnson

Sir, Father D. C. Barrett discusses the effect on the late Luis Buñuel of his Jesuit education (August 12).

Perhaps an indication is to be found in his often-repeated remark: "I am an atheist, thanks be to God".

Yours truly,  
DOUGLAS JOHNSON,  
4 Rue de la Cité,  
35400 Saint Servan-sur-mer,  
France,  
August 14.

OBITUARY SIR NIKOLAUS PEVSNER Art historian and chronicler of buildings of England

Sir Nikolaus Pevsner, CBE, distinguished art historian, writer and lecturer, and outstanding interpreter and recorder of English architecture and design, died yesterday after a long illness. He was 81.

He was the admiration of scholars all over the world and of all shades of opinion through the breadth of his knowledge on these subjects and the quality of his writing. In all this he combined deep learning, sound judgment and quiet humour.

War, after a short period of internment as an enemy alien, Pevsner assisted in clearing the London streets from the rubble of buildings which he might otherwise have later recorded, until he was offered the task of keeping The Architectural Review in being. He edited it almost single-handed from 1942 to 1945...

academic role. Before he left Germany he had published in 1928 a study of Baroque Architecture in Leipzig and (1927-1930) Italian Painting from the end of the Rococo. In England, following his Pioneers, he wrote An Enquiry into Industrial Art in England (1937), which showed that he was capable of pointed criticism as well as appreciation.

Of more general and practical importance were his account of "man shaping space" in An Outline of European Architecture first published as a Pelican book in 1942; and his series of super guide-books The Buildings of England which appeared from 1951 onwards. In these with omnivorous appetite and discriminating taste, he aimed to record every notable product of architecture from the distant past to the present day...

Duress defence to contempt of court

Regina v "K" Before Lord Justice Watkins, Lord Justice Kerr and Mr Justice Kenneth Jones

imprisonment imposed at Newport Crown Court by his Honour Judge McCree, QC, who found him to be in contempt of court for refusing to give evidence in the trial of "N", who was charged with assaulting him.

the human bladder cancer gene discovered last year. In cells previously treated with chemical carcinogens (cancer-causing agents), the addition of the replica of a strand of bladder cancer DNA stimulated the transformation to malignancy.

thought that would be the end of the matter. There was no doubt that there was evidence of duress which was overcome by it. He was prevented from putting that evidence.

The facts were that in February, 1983, the defendant was in Camp Hill prison in the Isle of Wight. So was "N", a man with a formidable criminal record with convictions for burglary, robbery, causing actual bodily harm and wounding with intent.

the defendant had already made clear that although initially he had said he would give evidence in the trial of "N", he had changed his mind and would not testify to having been wounded. That was because at a number of prisons he had been threatened not only by "N", but also by others on his behalf that there would be further violence to him and his family if he gave evidence.

There was no doubt that there was evidence of duress which was overcome by it. He was prevented from putting that evidence. There were many ways of dealing with the situation where a person refused to give evidence. Sometimes the issue and sometimes the nature of the evidence was such that it was necessary. How it was dealt with depended on the circumstances. It was always wise that no section was taken in haste.

MR JAMES SCOTLAND

Mr James Scotland, CBE, Principal of Aberdeen College of Education since 1961, and a major influence in Scottish education, died suddenly at his home in Aberdeen on August 15, less than three weeks from the date when he was due to retire from service.

MR JAMES SCOTLAND

teacher education and the development of the Scottish educational tradition.

MR JAMES SCOTLAND

His influence extended nationally and internationally and his talents were recognized and utilized at many levels within and without the educational sphere.

MR JAMES SCOTLAND

He was well known also as a contributor to educational journals and as the author of several textbooks, notably his History of Scottish Education (ULP 1969), widely regarded as the standard work on the topic.

MR JAMES SCOTLAND

Scotland also had another happy commitment - his knowledge of and involvement in drama, as lecturer, playwright, script-writer, director, adjudicator and actor. His name is inseparably linked with the Scottish Community Drama Association where for many years his plays dominated the annual one-act festivals; and with annual Shakespeare courses at Westham House, near Stratford. He published in all some 30 plays shrewdly observed in content and characterization and constantly represented in production.

MR JAMES SCOTLAND

He was well known also as a contributor to educational journals and as the author of several textbooks, notably his History of Scottish Education (ULP 1969), widely regarded as the standard work on the topic.

THE ARTS

Television  
Preparing for real

Flight sergeants, like all sergeants, are well known for versatility, and might confide that without them the officer corps could well not survive. Flt Sgt Harry Parkinson, for instance, simulating the plight of a pilot trying to escape in hostile territory in BBC1's *Tomorrow's World* at Large last night, was required to display a histrionic talent and did so in a manner that might have made any watching producer sit up.

The pilot audience enjoyed it. This was the first week of their combat survival course at RAF Mountbatten, Plymouth, the classroom stage. Flt Sgt Parkinson had obviously done it all before and he was good value.

His pupils had little to laugh about in their second week, cast out on Dartmoor with minimal rations, ditches and parachutes, making their own backpacks, learning to snare and kill game, hungry, wet and wretched. Even in peacetime, apparently, a fast-jet pilot can expect to eject once; in wartime, obviously, the odds increase. At Plymouth they prepare them for the real thing in hostile circumstances.

*Tomorrow's World's* Peter Macann went along for the programme's pride and was half of one of the seven teams. He found it "tough, very tough" - and he did not have to complete it. After the part where he had taken cover to attempt to evade the hunter packs of Royal Marines, he had to withdraw, reproved by the Official Secrets Act which required the next part of the proceedings, the interrogation, to be off-screen.

Briefing the Marines, the course C.O. cautioned against overrealism. The pilots, he said, were "rather expensive boys". It cost about £2m to train a Jaguar pilot these days and he would like them back flying as soon as possible. The Marines got on with it, flushing most of the fugitives, plopping them face down in the earth, kicking their legs apart and blindfolding them. If the Marines were on their best behaviour, their subjects may not have thought so.

All the pilots, successful in evasion or not, were taken off for the interrogation which was, apparently, realistic enough for some to cry, others to ask to withdraw and some to be withdrawn on medical grounds.

Without all that, Peter Macann lost a stone. What the others gained or lost in this game, no less grim for the service jockney, we are not to know. I hope they are still glad they volunteered.

Ponyboy (C. Thomas Howell, left) lays plans with fellow greasers Steve (Tom Cruise) and Two-Bit (Emilio Estevez) in *The Outsiders*

Cinema  
Enthralling appeal to old-time sentiment

**The Outsiders (PG)**  
Warner West End; Classic, Oxford Street; Cinecanta, Panton Street

**WarGames (PG)**  
Odeon, Leicester Square

It will not be at all fashionable to admire Francis Ford Coppola's newest film, *The Outsiders*, because it is not a fashionable film. Its style originates in film-making traditions from the distant past of movie history. Its method is to work upon the sentiments, and that is something that has been out of favour with British audiences for a long time. The new audiences like to feel the effects of film in their viscera, not in their tear-driets. But, if they are to be touched, then they want it done with a convincing impression of realism. If they catch themselves allowing their sentiments to be affected by some evident artifice, they are resentful of the manipulation.

In the end, of course, artifice is the nature of art, and all its effects upon us are a kind of manipulation; and there is nothing inherent in those effects that demeans either the artist or the audience. On the contrary, if we do not feel the least welling of a tear at *The Outsiders*, we are missing the point. The film is based on a 1966 best-seller in the American "young adult" market, written by S. E. Hinton. The genre's signature belonged to a young woman who set out to write a novel about her despair at the senselessness of the ritual warfare waged by the young males she met in school days in the early Sixties. The

story gives the film a superficial resemblance to *Rebel Without a Cause* and the teenage films that followed it, but the comparison is misleading. Those films tried to give their characters some sort of social context. They were fighting a society in which they felt themselves outsiders, but still wanted a place. There was a conflict between the generations, a natural rebellion of the young against parents and against authority.

In Coppola's film society at large is not hostile to Ponyboy (C. Thomas Howell) and Johnny (Ralph Macchio); for the most part it is content just not to know they are there. Their misfortunes are their parents - dead in Johnny's case, callously indifferent in Ponyboy's. Coppola wants to show more elemental conflicts than in Nicholas Ray's film, in the feuding between the Greasers, from the wrong side of the tracks, and the Socs, boys from the affluent middle class, and between the boys' innate good nature and good sense and the aggressiveness demanded of them by the group-instruct of the pack.

"I wanted to take those young street rats", says Coppola, "and give them heroic proportions." He achieves this - steeped in film lore as he is - by returning to the heroic eras of the cinema. He imbues his film with the fatalism of *You Only Live Once* or *They Live by Night* or the French realist-romanticism of the late Thirties. His images - the utterly fearless sentiment of silhouettes against red sunsets, or sunlit reflections on water - belong to the silent screen. So does such a scene as the death of the boys' crazy friend Dallas, caught and gunned down in the headlights of the pursuit cars that circle him. Carmine Coppola's music is used like a silent film score to supercharge each dramatic moment. The emotions of the characters are unabashed, and the dialogue is unrestrained by naturalism. At times it recalls the bare poetic clippedness of *All Quiet*.

If you are only prepared to yield to this long-unaccustomed appeal to sentiment, it works, enthrallingly, so that at the end you are fully prepared to accept, and to be touched by, the dying Johnny's exhortation to his friend Ponyboy to "stay gold" - gold being the

innocence and responsiveness of childhood, of which some vestige has still remained in these two. Coppola has set out to recreate the experience of an age when movies and their audiences were younger, and the combination of the story, the images, the music and the words carried them off into new regions of imagination and sentiment. For this unfashionable spectator, he succeeds.

The message of *WarGames* is very much the same as that of *The Outsiders*. The principal character in the film is a computer in the United States Combined Operations Center with a facility for learning from its own mistakes, and mastery of a variety of games including Thermo-Nuclear War. At the climax of the film it has taken matters into its own hands and is about to annihilate the Soviet Union. The catastrophe is ingeniously averted by setting the computer to compete with itself at noughts and crosses. This pulls the creature up short with the puzzling discovery: "A strange game: the only way to win is not to play".

It is a useful moral for a nuclear age; and the enormous box-office attraction of the film shows that it is a very popular one among the threatened masses. *WarGames* to an extent is able to hide its own sentimentality behind the great mass of electronic machinery which, rather more comprehensively demonstrated here than in, say, *Tron*, is as intriguing to older generations as to the computer-age young.

The hero is a lad who does not make very good grades at school, yet is a wizard with his home electronic gadgetry (he has even hacked the school computer so that he can improve his grades). One day he accidentally links into the operations room computer, and playfully punches in fictitious information about a Soviet attack on Seattle and Las Vegas. The boy is hailed in by the FBI, and the Third World War is on its way when the younger saves the day by teaching the old dog its instructive new trick.

It is a fable of exemplary simplicity, related with verve and suspense under John Badham's direction. Essentially a children's story - which accounts for its logic and good sense - it clearly has a very broad audience appeal: to prove it,

merely stings where it should scald. The Brahms suffered least: its contours were merely exaggerated at times, its part-writing polarized but always alert and alive. If the spirit had a clear win over the letter here, then in the Haydn No 77 No 1 Quartet, which opened the evening, the letter was too crudely articulated for the spirit to resist distortion. What started out as a potentially aggressive bluff rhythmic humour soon became monotonous, as phrases were allowed to bulge out of shape; and the Presyn served only to reveal the invalidity of sound without due respect for silence.

But these qualities now glint and arrest the ear only to be smothered in an impetus which substitutes external ardour for internal, disciplined energy, and dissipates argument by squandering what is subordinate rather than using it to sharpen or offset the main thrust. Whether periodic technical clumsiness is due to ill-health or to a lack of rehearsal, the audience cannot know; but it is not pleasant to find oneself waiting for the next pre-echo or bracing oneself against the coarse reply or riposte which, as in the opening of the Beethoven,

especially of the less flattering aspects of local life, the slums and the workhouses and the night-soil men of South Yorkshire proudly posed around their wagons. A lot of trade tokens and printed ephemera of all kinds extend the value of the collections as social history, but also often delight on artistic grounds as well. What one gets from the show is a vivid panorama of British social life, especially of the humbler sort, through some five centuries. Comfortingly, though the miseries are not glossed over, there are splendours too, evoked with every sign of relish: the choice is left open.

John Russell Taylor  
● *The Genius*, a new play by Howard Brenton, opens at the Royal Court on September 12.

**South Bank Summer Music**  
**Amadeus Quartet**  
**Queen Elizabeth Hall**  
One of the largest audiences so far at South Bank Summer Music assembled on Wednesday to hear the Amadeus Quartet, for the name and the musicianship hardly have to shout to make themselves heard. It is the more disquieting, then, that of late that is exactly what seems to be happening.

There is still so much to admire, qualities in this quartet's playing that it is even tempting to take for granted: the spontaneous fusion of delight and high seriousness, for instance, in the geometrical puzzle of the Allegretto of Beethoven's Op 95 F minor Quartet; the weight of rhythmic unanimity churning the asymmetry of its third movement and the finale of Brahms's Op 51 No 2; the flux of tempo and timbre within the same shared impetus in the slow movements.

But these qualities now glint and arrest the ear only to be smothered in an impetus which substitutes external ardour for internal, disciplined energy, and dissipates argument by squandering what is subordinate rather than using it to sharpen or offset the main thrust. Whether periodic technical clumsiness is due to ill-health or to a lack of rehearsal, the audience cannot know; but it is not pleasant to find oneself waiting for the next pre-echo or bracing oneself against the coarse reply or riposte which, as in the opening of the Beethoven,

**Howel, King of All Wales (1641), from the Carmarthenshire Record Office**  
mums Psalter, have also somehow arrived in record office collections, and so in this exhibition.  
Later on, there is a surprising richness of photographic record,

merely stings where it should scald. The Brahms suffered least: its contours were merely exaggerated at times, its part-writing polarized but always alert and alive. If the spirit had a clear win over the letter here, then in the Haydn No 77 No 1 Quartet, which opened the evening, the letter was too crudely articulated for the spirit to resist distortion. What started out as a potentially aggressive bluff rhythmic humour soon became monotonous, as phrases were allowed to bulge out of shape; and the Presyn served only to reveal the invalidity of sound without due respect for silence.

Parthenogenesis is good box-office. I am sure. But the playwright John Fielder has taken no chances and filled out his study of a young novice's mysterious conception and infanticide with psychoanalysis, domineering mothers, smoking problems, girls obsessed with being overweight or unattractive ("I left the Church because I had freckles"), a singing nun, menstruation and every other interest of the New York theatregoing public, for whom the Roman Catholic Church is potentially enough itself.

In London, the play seems a strange specimen indeed, even in a serious production by Frank Hauser (no less) built around an impeccably intense performance by Susannah York as a psychiatrist who is ostensibly brought in to assess young Sister Agnes's sanity, but whose real task is to strengthen the proceedings with a shrink's crisis of faith similar to the one which proved so profitable in *Equus*.

She is an atheist who can now have no children, who saw her sister left to die of acute appendicitis in a convent, who went in see Garbo's *Comille* five or six times in the hope that a different last reel might avert the tragedy, and still searches for something to produce happy endings. Confront her with a Mother Superior (Honor Blackman, unrecognizable in coif, habit and rasping Irish accent) who has her own claim of motherhood over the girl, and you have a situation which can look as though it has the stuff of drama and over which enough intellectual tie-ups can be cross-hatched to dazzle the stalls public and leave them with the impression that something significant is being said.

Miss York, making a welcome return to the London stage, handles her private confessions to the audience with a conviction that almost disguises their origins as the life-story gush so beloved of American theatre, and sails with tact through such despicable attempts at humour as the discussion of what saints might smoke. (King-size for Thomas More; St Joan would chew Gold Block.)

Improbably telling her "sof the hell out of it" with "getty Irish 't's", Honor Blackman's Mother Miriam Ruth also gives proof of a versatility that suggests the cast have rosier prospects than the playwright.

Colin Matthews's *Night Music* is not a new piece. It was first heard in 1977 and published the following year; the BBC recorded it not long ago; it has been played in Europe and America. Which makes it the kind of work we ought to hear more of at the Proms - one with something of a track record rather than a commissioned bolt from the blue. Matthews dedicated it to the memory of Deryck Cooke, who died while the piece was being written. The composer says this "no doubt influenced its somewhat elegiac mood", but on this occasion there was more of the dour, monochrome colouring suggested by the title than any feeling of elegy.

Indeed *Night Music* seems to be looking for a darkened melody in a pitchblack room: over obsessive low, punctuating chords from the wind (some times attacked by louder horn calls, a difficult texture to balance well), fragments emerge: a rising flute passage, a sudden whirling aside of a curtain of strings to reveal busy

MARKET REPORT

Burton placing expected

ACCOUNT DAYS: Dealings began, Aug 15. Dealings end, Sept 2. Contango Day, Sept 5. Settlement Day, Sept 12.

Big institutional investors were said to have been soured out yesterday about a placing of 40 million shares by the Burton Group...

market for funds, saying "The Government have run us out on that one" BP shares closed 2p better at 44p after dropping during the day...

£20m cash on buying out the company's minority shareholders.

That leaves English China as Charter's takeover favourite in the market's view and those shares held steady at 21p.

Mr Alfred Vogel, chairman of textiles company L. D. & S. Rivlin, would appreciate someone telling him who exactly has sold a large stake in the company...

Mr William Doughty, did not disagree saying that he was not unhappy with the current profits performance. He too dismissed takeover speculation.

He said that Charter Consolidated did not intend spending any of its recently acquired £20m cash on buying out the company's minority shareholders.

subsidary, once again denied by the directors.

Elsewhere in the sector, BICC rose 5p to 233p in front of next month's profit figures.

The shares of holiday companies were hit by fears that the price cutting by Thomson could develop into a price war.

A bullish broker's circular put 4p on to Harris Queensway at 280p.

It is expected that the much improved performance from Bougirovie, a subsidiary of CRA.

circulators suggesting that London Brick - unchanged at 80p - might bid after all. On Wednesday London Brick described Istocak as expensive and said there were other ways of expanding into non-fiction brickmaking than by buying Istocak.

But several brokers are now saying that London Brick is just trying to talk the price down and may return with an offer next Wednesday when it reports its half-year figures.

One option being considered by London Brick is to build up a stake in a number of smaller regional brickmakers.

KITZ dropped back from the year's peak to 660p. The shares have been strong ahead of next month's figures.

Economic statistics: Sales and orders in the engineering industries (May). Finished steel consumption and stock changes (second quarter - provisional).

NOTEBOOK

Philips, the Dutch electrical giant, raised its interim net profits from 250m guilders to 258m guilders (\$57.6m), while sales volume rose by only 1 per cent. But both sales of, and profits from, consumer goods are still under pressure and the company does not expect overall net profit for the year to grow by the forecast 4-5 per cent. The joint agreements with AT & T in digital switching systems and with Warner and Siemens in recorded music are progressing.

The 10 Trustee Savings Banks (TSBs) in England and Wales, which have over 1,200 branches, are to amalgamate into a bank called TSB England and Wales on November 21. The four Scottish TSBs combined to form TSB Scotland in May. Legislation to convert the TSBs into a companies act structure is well advanced.

Sterling M3 still double Treasury's target Fall in money supply growth will continue, says Government

By Peter Wilson-Smith The Government reassured financial markets yesterday that it was bringing money supply back under control in an attempt to allay any remaining fears of higher interest rates. The Treasury said that it expected the annualized rate of money growth to continue to fall in the months ahead. All three main measures of money supply are still running well ahead of the Government's 7 to 11 per cent target range in the February-July period. But final money supply figures for last month, published yesterday by the Bank of England, confirmed that monetary growth slowed sharply in July after the previous month's surge. Sterling M3, the most widely watched measure of broad money supply, is still increasing at an annualized rate of 14.7 per cent. However, the detailed figures published yesterday confirm that the main expansionary impetus was coming from the private sector's high level of borrowing. The Government managed to soften the impact of this in July with the high level of government debt sales. Government debt sales of £1.1bn - mostly gilt-edged stocks - were the highest since last November. The low level of bank lending to the private sector also helped the Government to get closer to its targets in July. Seasonally-adjusted bank lending rose by only £300m. Government officials believe there is little sign of a resurgence in demand loans from the private sector and officials were also expressing confidence yesterday that the high level of government borrowing and spending which caused money supply to overshoot so badly this year, will not continue. This has led to optimism in the Treasury that the pace of money growth will continue to slacken, and should in turn help to remove lingering fears about higher interest rates in the United Kingdom. However, other official statistics out yesterday may add to doubts about the strength of the economic recovery. Cyclical indicators for the economy which are supposed to give early signs of changes in economic activity shows almost no change in the longer leading index between April and July. The Central Statistical Office said it was impossible to tell whether this was more than a temporary hesitation in the previous rise in the index. The latest figures on capital spending for the second quarter of the year also show investment in the economy stagnating. One mildly optimistic sign is that manufacturing industry investment has picked up slightly, but from a low base. Industry's stock levels also fell in the second quarter of the year. A small rise had been expected, but the provisional estimate for manufacturers, retailers and wholesalers stocks indicate a fall of £155m.

Table with columns: MONEY GROWTH, CAPITAL EXPENDITURE. Sub-headers: July %, Feb-July annual rate %, £million at 1980 prices, seasonally adjusted. Rows: M1, M2, M3, Target band Feb 1983 to April 1984 at annual rate 7 to 11. Manufacturing, Distribution, Financial, Total.

Source: Bank of England (P) Provisional. The Government managed to soften the impact of this in July with the high level of government debt sales. Government debt sales of £1.1bn - mostly gilt-edged stocks - were the highest since last November. The low level of bank lending to the private sector also helped the Government to get closer to its targets in July. Seasonally-adjusted bank lending rose by only £300m. Government officials believe there is little sign of a resurgence in demand loans from the private sector and officials were also expressing confidence yesterday that the high level of government borrowing and spending which caused money supply to overshoot so badly this year, will not continue.

Maxwell complaint against Kleinwort

By Our Financial Staff Mr Robert Maxwell, chairman of the British Printing & Communication Corporation, yesterday lodged a complaint with the Takeover Panel against Kleinwort Benson, the merchant bank. Kleinwort is acting as adviser to John Waddington in that company's defence against an £18.2m takeover bid by BPCC. Mr Maxwell's complaint follows Kleinwort's claim that shareholders representing 46.2 per cent of Waddington's capital had indicated that they did not intend to accept the BPCC offer. "I have lodged a very vigorous complaint with the panel Mr Maxwell said. "This is the first time I am aware that a merchant bank has claimed that it has 46 per cent of shareholders supporting them before an offer has closed." Last night it emerged that the Takeover Panel had agreed the wording of the Kleinwort

Krugerrand sales fall by 20%

By Lorna Bourke Sales of Krugerrands last month were 20 per cent below those of a year ago and were less than one third of the June total. July sales were 117,758 ounces compared with 147,061 ounces in July last year, and 407,579 for June this year. Dealers blame the decline on a relatively unexciting performance by gold last month. It traded within a narrow \$20 range depressing sales which tend to fluctuate widely depending on gold price movements. Gold hit a high for this year of \$503 an ounce in January compared with a low for that month of \$449, and investors piled in, buying more than 437,000 ounces of Krugerrands. Last month gold traded between \$410 and \$430 giving investors little room to speculate and sales at 117,758 ounces reflected this. Overall, sales for the first seven months of this year are 9 per cent up on the same period last year, totalling 2,164,290 ounces. This is surprising since gold traded within a much wider range last year - \$296 to \$498 compared with a range this year of \$410 to \$511. "A large proportion of Krugerrands are bought by private investors and sales are therefore subject to seasonal factors like holidays," said Mr David Youngman of Manchester stockbrokers Charlton Seal Dimmock & Co. Mr Youngman believes that a continuation of the present trading range for gold seems most likely. "Following the invasion of Chad by Libyan troops and with the conflict in Central America showing no signs of easing, a significant decline in the gold price is unlikely and the substantial technical support around \$400 should limit any fall," he says. He believes this will be counterbalanced by uncertainty over American interest rates, and the US budget deficit which will prevent gold from making any significant headway.

Banks grant Poland extension on debts

By Our Banking Correspondent Poland has reached broad agreement with commercial banks on rescheduling \$2.6bn (£1.7bn) of loans and interest payments due this year. Talks were continuing yesterday in Vienna to hammer out details, but an official communiqué said that the banks had signed a memorandum of understanding with officials of the Polish finance ministry and the foreign trade bank, Bank Handlowy. Western banks have agreed to spread payments of capital over a larger period than previously because of Poland's deep-seated economic problems. Ninety-five per cent of the \$1.5bn capital due will be rescheduled over 10 years, instead of the seven years in the 1982 rescheduling agreement. Banks have also made a further concession on how much of the \$1.1bn of interest payments due this year will be re-lent to the Poles in oew trade credits. Originally 60 per cent was proposed, but this has been increased to 65 per cent. Western governments are expected to meet next month to discuss Poland's official debts again, in the wake of the lifting of martial law which had blocked official reschedulings since 1981. The governments may also soon be discussing part of Brazil's huge debts. Brazil is reported to have asked the Paris Club, the ad hoc group of western governments which handles reschedulings, to hold talks on extending payments. According to Brazilian central bank figures, the official bank government and official agencies \$14.3bn at the end of 1982. The Export Credits Guarantee Department - which issued the policy under a five-year-old Act designed to encourage British firms to invest in developing countries - refused to comment on the nature of its business.

Oceonics goes for full listing

By Wayne Livott Oceonics Group, the marine electronics company, has applied for a full listing on the Stock Exchange. At present it is the second largest company on the Unlisted Securities Market. Simultaneously, it is placing 1,750,000 new shares and 3 million 10% per cent cumulative shares, redeemable in 1993, to raise a total £7.6m. The shares of the company jumped 67p on the news to 270p, a new peak taking into consideration the one-for-one scrip issue made last March when the group announced its intentions to apply for a full quote. Two of the company's directors are also selling 620,533 shares through Hill Samuel, the company's merchant banking advisers. High-technology interests have been absorbing £10m a year in capital investment.

Two Lake & Elliot plants to go

By Our Financial Staff Lake & Elliot, the steel casting company, yesterday announced the closure of two steel foundries involving the writedown of £4m of assets and the loss of more than 300 jobs. The closures are necessary after a further collapse in demand since Lazard Brothers, the merchant bank, completed a scheme this year to cut excess capacity in the industry. Mr Peter Edwards, chairman, said in a statement to shareholders that the fall in demand for British foundry products has exceeded the reduction in the industry's capacity after implementation of the Lazard scheme. The group is to close the National Steel Foundry (1914) at Leven, Fifeshire, which employs 294 people. A further 30 jobs will go when Lake & Elliot Jacks Equipment closes in Braintree, Essex.

Argentina 'risk' insurance

By John Lawless Guarantees and Overseas Investment Act, published yesterday for the last financial year. That period began on April 1, last year. The Argentines invaded the Falklands the day. The company, which has not been named but is understood to be involved in supplying construction equipment, paid about £13,000 to insure itself for £1.1m right away, and up to £1.95m over the next 15 years. The facts emerged from the annual report of the Export

City Editor's Comment Keeping confidence in the Commission

Mr Nigel Brookes, chairman of Trafalgar House, intends next month to press for publication of the evidence his side has submitted to the Monopolies Commission which is sitting in judgment on his proposed acquisition of P&O, the shipping group. One has to admire his courage, if nothing else, because securing the necessary permission promises to be a bureaucratic nightmare. Now only does he need to get the approval of the Commission, but the Secretaries of State for Defence, Transport and Trade and Industry will also have to be won over. Doing that may well require a voluminous and individual submission to each because, though they may not have the legal right to refuse permission, they do have every right to demand to be persuaded. The patten seems to be repeated at Fleet Holdings, the national newspaper and magazine group headed by Lord Matthews. Mr Holmes a Court has built up a stake which his aids confirm is now 3 1/2 per cent. He has held about 2 per cent of the group for sometime but has been buying more recently. Last month, what was regarded as the "parental protection" stock held by Trafalgar House, Fleet's former parent company, was cancelled. It effectively allowed Trafalgar to convert £15m loan stock into about 40 per cent of Fleet shares in the event of a takeover bid, and was designed to keep the infant Fleet independent until it began maturing. Even without this protection, any takeover intentions by Mr Holmes a Court looks premature, although he is offended by the suggestion that he would sooner walk away from a situation with profit than make a full scale bid. But the sceptics were out in the stock market yesterday where Fleet Holdings, emerged 18 months ago at 21p a share, fell back 3p to 119p. Even at this level, Mr Holmes a Court is still showing a profit.

Unfair to P&O

If and when those hurdles are overcome, the City Panel on Takeovers and Mergers will want to have its say. It is most unhappy with the idea because it thinks it would be unfair to shareholders if this information was published, without some independent assessment of its veracity. In other words, the Panel will insist that the information be audited, and if that is not possible then they will surely want some independent opinion short of an audit. But that will create a further problem. P&O will have to reply to these missives, or risk its silence being misinterpreted. And if it chooses to reply, that too will have to be audited. It is hard to see what is going to be achieved by all this - other than Mr Brookes perhaps achieving a tactical advantage in his bid battle by casting doubt on the provisional value of P&O assets. But against that, the risk of damage to the reputation and soundness of the Monopolies Commission seems to be very great indeed. There is already firm criticism of the quality of its reports.

Share prices lose opening gains

New York (AP-DJ) - Wall Street stocks turned mixed after the early follow-through gain faded. The Dow Jones industrial average was down by more than three points. It was up by 2 1/2 points in early trading. Advances still outnumbered declines, however, by a 3-to-2 margin. Trading was moderate. Mr Harry Lamberger, a market analyst for Paine Webber, said: "The ties of the bond and stock market may be fading, but stocks still respond to the bond market action. Bonds appear to be finding some resistance to further gains but the outlook is still optimistic." G. D. Searle was down 1 1/4 at 52 3/4. A physician at the Massachusetts Institute of Technology has cautioned doctors to be alert for possible behavioural problems he said could result from Aspartame, a sweetener made by Searle, Coca-Cola, which has begun using Aspartame in its Diet Coke, was down 1 at 50 7/8. Exxon was up 1/8 at 39, Standard Oil of Indiana up 1/4 at 53 7/8, Conoco up 1/4 at 31 3/8, Mobil up 5/8 at 33 7/8, Texaco up 3/4 at 38 1/4, Phillips up 5/8 at 37 5/8, and Amerasia Hess up 1/4 at 34 1/2. Mr Charles Maxwell, an oil analyst at C. J. Lawrence, has recommended buying oil shares. General Motors was trading at 69 1/2, down 1/8; General Electric 47 3/4, off 1/4; International Business Machines 123 1/2, up 3/8; Texas Instruments 110 5/8, up 2; Tandy 38, off 1 1/4; Pfizer 36 3/4, down 1 3/8.

Bank seeks \$16bn for loans programme IDA lobbies US over funding

By Michael Prest The International Development Association, the concessional loan arm of the World Bank, has embarked on an intensive lobbying effort to convince the Reagan administration that it should contribute more to the next round of IDA funding. IDA officials fear that if they cannot persuade the United States by the time of the annual meeting of the World Bank and International Monetary Fund at the end of next month at least to relax its attitude, IDA 7, the next round, will not start on the scheduled date of July 1 next year. The IDA makes loans for 50 years to the poorest countries, without interest and charging only a service fee. It was founded just over 20 years ago as an offshoot from the World Bank, whose president is Mr A. W. "Tom" Clausen. Under IDA 6, which was extended by a fourth year, the association should lead \$12,000m. But a succession of meetings in recent months has failed to dissuade the Americans from reducing their commitments to only \$750m a year. Since the donor members of the IDA, who are mainly the rich industrial countries, contribute in proportion to the United States, IDA 7 might be only \$9,000m. The IDA, however, believes that at least \$16,000m is needed to offset inflation and to allow for China having joined the association. While admitting that the organization is engaged in a race against time, Mr Francis Mistry, a senior financial adviser at the bank, yesterday described \$16,000m as a "tough but not impossible target." Nevertheless, Mr Mistry feared that even if the lobbying campaign made headway, there was a danger that next month's IMF meeting could be distracted by another debt crisis, possibly Brazil, just as Mexico loomed large at last year's gathering. So far, however, the IDA has been reluctant to entertain suggestions that it could charge interest, lend over shorter periods, or borrow money itself on approximately market terms. The lobbying strategy is partly based on the belief that there is a "leadership gap" in the IDA. Japan has agreed to increase its contribution as a percentage of the whole.

ROBECO SHARES RISE BY OVER 20% IN FIRST HALF YEAR. The middle market price of our shares on 31st December, 1982, was £68. At 30th June, 1983, it was £70 - a rise of 20.7%. If the dividend of £3.00 paid in April is included, the appreciation totals 26%. The general rise in stock prices shows increasing confidence in economic recovery and improved business confidence. The United States particularly is leading this recovery, due mainly to a substantial increase in consumer spending. We have realised part of the capital gains made in our American portfolio and have also fully covered our dollar interests against currency risks. In Europe we have added to existing holdings and acquired new interests. We have also increased our holdings in the Far East. More than 325,000 new shares were issued during the first half-year, bringing the total outstanding to nearly 21 million. Assets at 30th June amounted to £1,419 million. Robeco, founded in 1933, is an equity-based trust, designed to provide investors with a balance between reasonable income expectations and capital appreciation prospects. With headquarters in Rotterdam, Holland, Robeco is one of a group of investment companies which, between them, have assets of about £4,000 million. NET ASSETS WORLDWIDE: America 44%, Europe 32%, Japan 14%, Rest of Far East 2%, Australia 3%, Other Assets 5%. To: Robeco N.V., Dept 385, P.O. Box 973 3000 AZ Rotterdam, Holland. Please send me a copy of the ROBECO semi-annual report for 1983. Name (CAPITALS PLEASE), Address.

Jeremy Warner reports on an unusual meeting

# Lunchtime rescue bid fails to satisfy chairman of TKM

It could have been any expense-account lunch - four men, a secluded table at the Savoy, four courses, two wines and a large bill at the end.

But this was no ordinary business meeting. They were talking big money - up to £70m. The aim was no less ambitious than the refinancing of a once prosperous international trading group now overburdened by a mountain of debt, supported by its bankers, and with no hope of trading its way into securer pastures.

Ranged round the table were the chairman of British Car Auctions, Mr David Wickins, fresh from his success in helping to save Group Lotus, the Norfolk sports car company; Mr Stephen Evans from the stockbrokers Anderson & Co and Mr Murdoch Morrison, a freelance corporate financier.

Their guest was Sir Montague Prichard, chairman of Tower Kemsley and Millbourn, the deeply troubled motor distribution and property group. It was his company they were discussing.

Sir Montague was installed as chairman of TKM last Christmas. He had been a director for many years. In the preceding years the group, which had once recorded pretax profits of £16m, made an attributable loss of £26m, while net debt, at £100m, had spiralled to seven times the value of shareholders' funds.

Mr Kenneth Thorogood, the former chairman, and the ex-Slater Walker man Mr Malcolm Horsman, who had been managing director for two years, left abruptly.

Sir Montague listened with a mixture of hope and incredulity as his fellow diners discussed a plan that might all but wipe out the group's £100m banking debt.

The three men claimed to speak for a group of shareholders together accounting for more than 50 per cent of TKM's share capital.

The plan was to raise an initial £13.5m via a one-for-all rights issue. This would be underwritten by financial and industrial companies who were already shareholders in TKM.

## 'We cannot trade our way out of this position'

In addition they would subscribe an equal amount of new shares capital on top, making the total raised to £27m.

They also wanted to see a strengthening of the TKM board of directors through promotion, from inside the group, of various executives in the subsidiary companies and through the appointments of outsiders.

But try as Sir Montague may, he could not persuade Mr Morrison or Mr Evans to disclose the identity of their clients or those prepared to put up the hard cash.

He knew that Anderson had, over a long period put a lot of clients into TKM who were now nursing sizable paper losses on their investment.

He was also told that Mass Development of Kuwait with 9.5 per cent of TKM was a supporter of the scheme and that arm's length support was also being offered by Mr Kenneth Thorogood, who continues to hold more than 9 per cent of TKM, acquired in controversial fashion in May 1981.

But without more information, Sir Montague could not take the plan seriously.

In any case, the deal would depend on TKM's legion of 86 bankers currently co-ordinated by a committee of those lending the company £2m or more cash under the chairmanship of National Westminster.

They would have to agree to convert at least £27m of their debt into some form of deferred equity like redeemable preference shares.

This is not such an unlikely prospect as it might seem since the lease of life granted to TKM by its bankers comes to an end next May. The idea of conversion had also originated from one of the larger lending banks.

This ambitious proposal had been put together by Morrison Associates, several City pension

Thorogood (left) and Horsman: they left abruptly

Prichard (left) and Wickins: at cross purposes

funds and one big clearing bank were said to be committed to putting up the cash.

The lunch took place on July 9, but the proposal has yet to receive a decision from Sir Montague, who already takes merchant banking advice from Lazard.

"I am as aware as anyone that we cannot trade our way out of this position," he says. "It is obvious that we need capital reconstruction. But the bankers are likely to want to see further proof that we can trade profitably and successfully before they will agree to it."

"The basis of the scheme as presented is worthy of being put to our bankers, but I have yet to see concrete proposals and the names of the people prepared to put up the money. I would also have preferred to have waited until next spring."

TKM was once primarily an international finance and contracting house, but during the late 1960s and most of the 1970s it went the way of most ambitious trading companies, expanding into a wide diversity of businesses by acquisition.

Though TKM never sparkled in the way some international traders did, all went well until 1979 when the group lost its lucrative BMW motor distributing franchise in Britain - a business that had contributed about £7m profits in that year.

In an effort to replace the lost earnings, it paid £26m for Wadhwa Stringer, a motor distributor which accounts for about a tenth of BL's British sales.

It proved to be a disastrous acquisition, bought at a time when car sales were plunging and finance costs were soaring. In 1980, Wadhwa Stringer, far from replacing earnings, actually lost £5m.

TKM was in trouble and it was clear that the wheeler dealing ways of the past had to be put into reverse quickly.

But it was not until November 1981 that the group made its first divestment. The Overseas Services and Wings holiday business was sold to Rank Organisation for £14.5m.

The following May the original confirming house business was sold to the Hongkong Bank for £19m. The loss-making McKee agricultural equipment and snow blowing offshoot in Canada was first merged with a competitor and then put into receivership in November 1982.

The same sort of fate awaited the canned food interests which were first merged with Imperial Group's Smedley-HP Foods business and then sold for just £1 to a private company with a better record in the industry.

This programme has left TKM with a slimmed down Wadhwa Stringer, profitable franchisees in Britain and France for the Japanese car makers Mazda and Daihatsu, substantial property interests in North

America, the Price and Pierce timber and pulp company and several smaller peripheral interests.

Though the group returned to profit in its last half year of trading, these businesses are not of the scale necessary to service £100m of debt.

So far, the handling of the crucial refinancing issue has been a public relations disaster. An enormous gulf seems to separate the board, from shareholders and shareholders from supporting bankers.

The Morrison group apparently believed that its plan had been adopted in principle by the board shortly before the annual meeting on July 19.

## Emissary failed to close the credibility gap

This belief, based on a letter from Lazard Brothers, on August 4, helped to head off a planned shareholders' revolt at the meeting.

But very little progress has been made since then. Another example of the communications gap is conflict over the role of Mr David Wickins.

He claims that he set up the original lunch to acquaint Sir Montague with the refinancing proposal and to offer himself as someone who might have a management contribution to make to Wadhwa Stringer.

Sir Montague claims, however, that he never fully understood the position of Mr Wickins in the affair so that when Mr Wickins sounded off in the press about a plan he had cooked up several years ago to float Wadhwa Stringer off, Sir Montague hit the roof.

The blue-blooded merchant bank Robert Fleming was recently appointed as emissary for the Morrison group but even this has failed to close the credibility gap that anonymity has created. If it is to get anywhere, the group will have to reveal itself.

Meanwhile its organizers are putting together a management team which they plan to move on to the TKM board when the time is right.

Besides Sir Montague, who has taken on the role of chief executive despite the original non-executive nature of his chairmanship, there are only two other executives on the board. The rest is composed of four non-executives who from time to time chair the group's three management committees.

To shareholders, the eventual alternatives seem to be a capital reconstruction or receivership. The sooner some kind of reconstruction can be put through, the sooner TKM can hope to become a viable investment again.

Thomson Regional Newspapers: Mr William Heaps is now managing director. He has been editorial director since July, 1982, and will continue these responsibilities under the new title of editor-in-chief. Mr Roger Nicholson will be deputy managing director. He retains his present responsibilities and will be assuming additional ones, in particular at TRN board level, for TRN's weekly newspapers at Chester and Merthyr Tydfil.

OCS Group: Mr Trevor Flindall, Mr John Gray and Mr Stephen Phillips have joined the board.

Esco International: Mr Geoffrey Adkins, who is a director of British & Commonwealth Shipping, has been appointed a non-executive director.

# SIEMENS

Information for Siemens shareholders

# Respectable showing in stagnating markets

Although the international economic situation remained unsatisfactory during the first nine months - 1 October 1982 to 30 June 1983 - of the current financial year, Siemens recorded a 13% rise in new orders worldwide and a small 3% growth of sales as against last year's third-quarter totals. Orders in hand rose 11% to nearly £15,100m.

**New orders.** Business differed widely in domestic and international markets and among the various operating sectors. New domestic orders increased 46% to £4,646m, due largely to two major power plant contracts. But even discounting the weight of these projects, domestic business brought in 7% more orders than in the same period last year. At £4,352m, new international orders remained 9% below last year's figure. Contributing to this result were the continuing stagnation of most industrial economies, balance of payment difficulties of several key client nations, and a slowing of infrastructure expansion in a number of oil producing countries.

Among the operating groups, Power Engineering and Automation was hardest hit by slow capital spending in many countries. By contrast, Communications - the other of the two large Siemens Groups - achieved slightly more orders in world markets than last year. Above-average growth of new orders was recorded by both the Data Systems Group and the Medical Engineering Group. The latter has already sold fifteen of its new nuclear magnetic resonance tomographs, nine of them to customers in the U.S.A.

**Sales.** Worldwide sales increased 3% over last year's third-quarter totals to £7,247m. Business developed somewhat more favourably at home than abroad: domestic sales rose 5% to £3,205m, while international sales were only 2% ahead of last year's figure at £4,042m. Data Systems and Medical Engineering were also the strongest Groups in sales, recording two-figure growth rates.

**Inventory.** Although inventories have increased 11% to £4,804m during the current financial year, this is due solely to major power plant contracts.

**Employees.** Underutilization continued to characterize most of the company's production facilities. Thus the number of employees could not remain entirely unaffected; worldwide, it declined 4% to 311,000. In the Federal Republic of Germany and Berlin (West) the reduction was 5%, and abroad 3% - a figure that would also

have been nearly 5% had the employees of a plant acquired by Siemens-Alis not been added to the work force abroad. Employment cost went up 1% to £3,153m.

**Capital expenditure and investment,** at £283m, remained at last year's level.

**Net income after taxes** was £138m (last year: £119m), representing a net profit margin of 1.9% (last year: 1.7%).

In £m	1/10/81 to 30/6/82	1/10/82 to 30/6/83	Change
New orders	7,992	8,996	+13%

## How does your Siemens investment grow?

Every few years, Siemens invites its shareholders to subscribe for new capital stock by issuing subscription rights. These rights may be exercised by shareholders to purchase new Siemens shares, even without investing additional capital of their own. The graph shows how these options can be applied to make 100 Siemens shares grow. The calculation assumes that each time there was a capital increase, enough subscription rights were sold by the shareholder to allow him to buy new shares with the proceeds alone. Thus from 1973 to 1983, his 100 shares have grown to 118. In 30 years' time, the number of shares has more than tripled. As a result, not only is the value of his portfolio bigger, but also the size of his annual dividend payment.

## Changes at Barclays International

Barclays Bank International: Mr Peter Dodd, managing director of Barclays Asia in Hongkong, had been made general manager in Hongkong. Mr John Philip, chief executive of the National Bank of Malawi, had been appointed managing director of Barclays Bank of Ghana and Mr Robert Bird, a general manager's assistant at the head office in London, is to become managing director of Barclays Bank of Botswana.

Massey-Ferguson has created four divisions out of the farm and industrial machinery division. Each will be headed by a president. Mr James Felker, president of the Perkins Engines division, become president of the tractors and farm equipment division. Mr John Sward, director of technical operations for Europe and world exports,

### APPOINTMENTS

will be president of the industrial machinery division and Mr Adri Verbaeghe, formerly general manager for Australia, is to be president of the Australian division. Mr Felker is succeeded as president at Perkins Engines by Mr John Devaney.

The Young Vic: Mr Bernard Brook-Partridge has been named as chairman, in succession to Mr Jeffrey Sterling. Mr Kenneth Fleet, who has resigned as deputy chairman, will be succeeded by Mr David Land. Mr Fleet is continuing to serve as a member of the board.

Electrocompagnies: Mr David James is joining the board as an executive director on September 1.

# Distillers

## Exports exceeded £450 million

Extracts from the Statement of the Chairman, Mr. J. R. Cater, and from the Report by the Directors, for the year ended 31st March 1983.

### General comments on results

#### Turnover and profits

The trading profit of £204.3 million was 12.5% higher than last year, reflecting improved results from each of our groups of products.

The increase in the sales value of Scotch whisky and gin, despite a reduction in volume, was assisted by the strength of the US dollar currency in which we invoice our shipments to the US of whiskies bottled in Scotland and Tanqueray Gin. With demand dampened by the economic recession, profitability was adversely affected by the relatively low utilisation of production capacity.

The Food Group and the Carbon Dioxide Company achieved increases in both turnover and profit.

The markets served by United Glass, the related company in which we hold a 50% interest, remained depressed. Due to further substantial redundancy payments and facility closure costs, our share of the recorded loss was only slightly less than for the preceding year.

Although UK interest rates were lower than twelve months earlier, the amount of income earned on short term investments and deposits rose by £6 million because of the higher level of our liquid resources.

The taxation charge for the year ended 31st March 1982 was disproportionately lower than the charge for the previous year. The position is now reversed. Following a steep fall in the "all stocks index", the taxation charge for the year compares unfavourably with last year's charge, with the result that the profit after taxation shows an increase of only 1.5% against 12.7% in the profit before taxation.

#### Dividends

An interim dividend has already been paid at the rate of 4.50p, an increase of 1.50p per share over the preceding four years. The sole purpose of the increase was to narrow the difference between the amounts of the interim and final dividends.

The directors recommend a final dividend of 8.50p per share, making the distribution for the year 13.00p against 11.75p last year.

#### Scotch whisky

##### Production

The export refund scheme for Community cereals, introduced in 1982, operated very satisfactorily throughout the year and enabled us to increase the proportion of Community cereals used. The only worrying aspect is the extent to which it is misunderstood by the British and the European Parliaments. It has been incorrectly seen as a subsidy to the industry. It is not: it is a proper reimbursement of the industry's own money.

Against a background of continued short time working in all Group distilleries, and because sales projections still disclosed an excess of stocks of maturing whisky against estimated future requirements, a decision had to be taken during the latter part of the year to close 11 of the smaller malt distilleries, 2 by-product plants, Carsbridge Grain Distillery and the Maltings at Port Dundas Distillery. The whisky maturation warehouses which form part of the closed distillery premises continued, and will continue, in operation. There are accordingly no immediate plans to dispose of any of these units.

During the year the Company commenced the sale of malted barley, employing the services of outside selling agents, which will enable greater use to be made of our malting capacity.

In a year when the Group's blending and bottling plants produced at a level well below capacity, it was considered essential to rationalise bottling activities in Fife. This resulted in the closure of Haig's outdated plant and the transfer of bottling to Distillers Company (Bottling Services) Ltd.

No new major capital projects were approved during the year but satisfactory progress was made in the completion of existing contracts.

#### EEC

In February 1983, the French Government finally complied with the European Court's decision of 1980 by removing the last element of tax discrimination against cereal spirits and in favour of wine spirits. In those three years, the French Government levied over £69 million in unlawful taxes on Scotch whisky imports. Simon Frères is continuing its legal actions to recover the unlawful taxes levied on its own sales.

The European Court condemned aspects of the Italian tax system which discriminate against Scotch whisky and gin. The Italian Government has not yet complied with those decisions.

The French Government recently introduced a new tax on spirits with an alcoholic strength of 25% or more, adding some 60p to the retail price of each bottle. This new discrimination makes the total rate of tax on whisky about 35 times higher than that on wine.

### SUMMARY OF GROUP RESULTS

year ended 31st March	1983	1982
	£m	£m
Turnover	1,127.2	1,083.9
Trading profit	204.3	181.6
Profit before taxation	200.8	178.2
Profit after taxation	132.9	129.7
Dividends	47.2	42.7
Earnings per share	36.59p	35.72p
Dividends per share	13.00p	11.75p

Direct comparison of industry exports with the preceding year is not possible due to the gap in reliable information for the period between March and August 1981. A comparison for the September/March period of 1982/83 with the same period of the previous year indicates little change in the Group's share of bottled in Scotland shipments. However, an increasing share of sales continued to be taken by very cheap brands imported in bulk. Bulk shipments accounted for a quarter of the Scotch whisky sales in the continental EEC last year, and a growing proportion is being bottled at very low strength.

It is pleasing to record a small increase in the Group's total shipments to the continental EEC markets in 1982/83 compared with the previous year. Johnnie Walker Red Label maintained its strong position with a particularly encouraging performance in France, and Black & White continued to perform well.

The Group's response to the increasing complexity and competitiveness of these markets is to strive to optimise coverage by Group brands of each individual market and to strengthen those brands through increased and selective investment in advertising and other brand-building activities. In this way the Group will be best able to benefit from any future upturn in economic conditions within the EEC.

#### Home sales

Figures for the year showed a decline of 5.3% in clearances of Scotch whisky in the UK, with the Group's share of the total remaining stable.

Johnnie Walker Black Label and White Horse performed well. The Claymore increased sales substantially, which was encouraging in the face of the continuing growth of private labels owned by major retailing groups. Haig persisted in a policy aimed to position the brand in the prestige sector of the market. The new arrangements for the marketing of Dewar's by Hedges & Buder made a satisfactory start.

An extensive review of the Group's sales and marketing activities in the UK will result in fundamental changes which will enable the Group to operate more efficiently.

In the last two years, reference has been made to the application to the EEC Commission for approval of a price structure for the UK market which would permit a number of Group brands, including Johnnie Walker Red Label, to compete effectively in the UK as well as in export markets. The decision continues to be awaited.

During the year the Chancellor extended to spirits a concession on credit for the payment of duty similar to that which has been allowed for a number of years on certain other alcoholic beverages. Although the percentage rate of duty increase imposed in the Budget was slightly less than the rate of inflation, taxation on spirits compared with wine and beer remained grossly inequitable.

#### Exports

The volume of Group shipments in the year was slightly down on the previous year, but profits improved by 14%.

This improved financial performance was due to price increases and to the strength of the dollar during the second six months of the year when shipments to the US almost exactly matched those of the equivalent six months of the previous year.

Because of the lack of HM Customs & Excise statistics of industry exports of Scotch whisky referred to above, it has not been possible to compare industry shipments of blended Scotch whisky during the twelve months ended 31st March 1982 and 1983. The statistics for the seven months ended 31st March 1983 indicate that the Group's share of industry shipments had declined mainly as a result of the substantial growth of bulk shipments of blended Scotch whisky at extremely low prices. Industry exports of bulk malt whisky continued at a high level, but the Group does not participate in this trade which is considered to be damaging to the long-term interests of the industry.

In December 1982 price increases were announced for our export trade with the exception of UK-bottled Scotch whiskies destined for the US. However, because of the economic problems in a number of key markets, the buy-in was less than last year.

Group shipments to the US were marginally below last year's. Trade sources estimate that the volume of Scotch whisky entering retail channels was down by 6% during 1982 and there is every indication that the Group maintained market share. The recent slight upturn in the US economy is not yet being reflected in spirit sales. Dewar's White Label had another good year and Johnnie Walker Red Label and Black Label performed satisfactorily. Most of our brands bottled in the US registered increased depletions to the trade. Usher's Green Stripe and VAT 69 Gold were our leading brands in this category.

The Group's trade with South and Central America was seriously affected by devaluation of currencies, loss of oil revenue and political unrest. Less was shipped to Venezuela and, as a result of devaluation and import restrictions, despatches will be adversely affected in the current year. The Group continued to have a major portion of the Scotch whisky trade in this market with its de luxe brands.

The Group had an excellent year in Spain. Trade was very satisfactory in certain Far Eastern countries and in a number of volatile Middle Eastern markets. Shipments to Japan were increased; White Horse maintained its leading position and Old Parr continued to make encouraging progress. Two new brands - White Horse Extra Fine and Johnnie Walker Old Harmony - produced exclusively for the Japanese market were first shipped towards the end of the year and initial sales have been encouraging.

A severe downturn in shipments to West Africa was the main reason for the decline in business with the African Continent. Sales in Australia and New Zealand were seriously affected by economic conditions.

#### Gin

Production at Wandsworth Distillery was maintained at close to maximum capacity and Tanqueray Gordon's operations continued at normal levels. As a result of reduced demand, Booth's operated well below capacity. The new bottling facility under construction at Basildon made

good progress and should be on stream, as scheduled, by the end of 1983. Preliminary commissioning of the plant and equipment is already under way. As recently announced, it is planned to transfer the bottling of Booth's gins and Cossack Vodka to Basildon in 1984.

The economic recession continued to depress the market for gin in the UK and to encourage the growth of cheaper brands, particularly those owned by major retail interests. It is therefore encouraging to report that sales of Gordon's exceeded those of the previous year and the brand maintained its strong position as market leader. Although Booth's Finest Dry Gin lost further market share in the year, sales of High & Dry Gin again made a useful contribution to the Group's performance.

After two exceptionally good years, when previous records were broken, export sales of Gordon's declined, primarily as a result of import restrictions in West Africa, a major export market. Gordon's and High & Dry increased shipments to France which continued its promising development as a gin market. Gordon's fared well in the markets in which it is produced locally, and the success of the brand in Spain merits special mention. There was, however, some loss of ground in the US and in New Zealand.

Exports of Tanqueray Gin to the US continued to grow steadily and the brand further consolidated its position of strength in the imported gin category. Shipments to other export markets also improved and of particular note was the performance in Canada.

#### Other potable products

Cossack Vodka experienced considerable pressure in the UK. However, the brand, with a recently introduced new bottle and label, is expected to make headway in the future.

Sales of Gordon's Vodka in the US, where it is produced locally, remained solid.

Cognac Hine achieved a significant increase in profits. During the year Hine acquired Denis Mounie Cognac SARL which owns the potentially valuable Denis Mounie and Comandon brands of cognac.

#### Food Group

The Food Group had an excellent year, during which increased sales and improved production techniques contributed to higher profits.

The Peerless Refining Company continued to suffer from adverse conditions and a proposal to purchase this company, received from Acatos & Hutcheson Ltd, was accepted.

#### Carbon dioxide

Carbon dioxide sales showed a small increase during the year. A high volume of plant installation business, particularly overseas, improved profitability on the engineering side and overall profits increased.

#### United Glass

Demand fell sharply with particularly adverse effects on the Glass Container Division. Although trading profits improved, redundancy payments and other costs of facility closures rose. The result was a reduction in the overall loss from £6.2 million in 1981 to £5.3 million.

Trading conditions worsened in the first quarter of 1983 and further steps have recently been announced to restore a reasonable balance between production and demand.

#### Personnel

The year was relatively free of local industrial disputes. The Group's employees worked hard to help to achieve the year's results in difficult trading conditions and the Board expresses its sincere appreciation of their efforts.

#### Future prospects

The Directors' Report highlights the difficult trading conditions prevailing in a number of important export markets, and stresses that the apparent improved consumer confidence in the United States is not yet being reflected in spirit sales. An intensely competitive situation continues to prevail not only within the spirits industry but in the wider field of alcoholic beverages generally, and recent price increases in export markets have had to take account of what would be commercially sustainable. Against that background the current year cannot be viewed as one of great promise and, with the experience of fifteen weeks behind us, we do not expect the volume of sales to match that of last year. In the absence of any significant upturn in world markets, therefore, present indications are that the results for the current year are unlikely to reach those we are now presenting.

### The Distillers Company plc

The one hundred and sixth Annual General Meeting of The Distillers Company plc will be held at the North British Hotel, Edinburgh, on Thursday, the 15th day of September, 1983, at 12.15 p.m.

Stewards get help in disqualifying Soba

By Michael Seely
Habibti showed himself to be the fastest horse in Europe when comprehensively outpacing Soba in the William Hill...

Winners and loser: Carson (left) and Dunlop (centre), jockey and trainer of Habibti; Nicholson, jockey of the disqualified Soba.

try to emulate Marwell, who was the last filly to win France's richest spring, the Prix de l'Abbaye in 1981. After Michael Dickinson had presented the trophy to John Dunlop, the winning trainer said...

penalized on these occasions, but that the horse and his owners and the betting public should be allowed to retain the spoils of victory.

# Car Buyer's Guide

Motoring by Clifford Webb

## Cherry selling leaves a bitter taste

Nissan Cherry Europe: low-key introduction raises questions

Alfa Romeo's flat four "Boxer" engine is an outstanding power unit. Together with state-owned Italian group's latest slick-changing five-speed gearbox it is a much admired combination, all the more surprising, then, that a new car has just gone on sale in Britain without anyone beating the publicity drum about its engine and gearbox.

The Nissan Cherry Europe is the outcome of the controversial project involving Nissan Japan, assembled at a new factory in Italy and then marketed in Europe, Naples, the home of the Alfa Romeo.

It is intended to sell both Alfa and Nissan versions in Europe, but the appearance this week in Britain of the Nissan version, more than a month ahead of its scheduled launch at the Frankfurt motor show on September 13, and the very low-key way it is being introduced, adds to the concern about this latest method of selling more Japanese cars in Europe. It has given Nissan UK another 500 cars in time for the August bonanza and about 6,000 in a full year.

The Times reported two months ago that the Alfa version called the Arna, after the initials of the joint company Alfa Romeo Nissan Automobili, would not be sold in Britain.

The official reason is that it will not help the strenuous efforts now being put into rebuilding Alfa's upmarket image here if it is associated with a cheaper "Japanese" car. However, sceptics like myself are inclined to ask why is Britain so different from other European markets, where it is apparently planned to sell the two versions side by side.

European-built Cherrys are distinguishable from 100 per cent Japanese-built vehicles only by their wider rear light clusters, lower positioned side rubbing strips and styled road wheels. The two models on offer are the Cherry Europe 1.2 litre, costing £4,184, and the 112 mph Cherry Europe GTI with a twin version of the 1.5 boxer engine selling at £5,349.

Turbo Volvo: as smooth as bigger engines

change is all that is required to sell reduced. A number of other improvements include bigger brakes with more power assistance, more efficient ventilation and new style alloy wheels.

With effect from September 1, Porsche prices go up by an average of 4.2 per cent with the biggest increase, nearly 9 per cent reserved for the new Carrera. It starts at £21,464 for the Carrera Coupé and Targa versions and ends at £24,340 for the Cabriolet with full sport equipment. A new Porsche 928S series 2 will go on sale here in November and is said to be exclusive to Britain. Apparently we rate such special treatment because we are Porsche's second largest export market after the United States.

## New Carrera

Of all Porsche's range, it is the classic rear-engined 911 SC which the most of us associate with the Stuttgart company's image as a builder of very high performance sports cars. After all, it has been around a long time, considering it was introduced at the 1963 Frankfurt motor show. But when your designers hit the jackpot as convincingly as Porsche's did with the 911, development rather than

## Turbo Volvo

A small highly stressed turbo-charged four cylinder engine as an alternative to a bigger normally aspirated V6 would seem to have little to recommend it as the power unit for a large luxury saloon. But that is the choice Volvo offers on its top of the range 760 series and it turns out to be a surprisingly good combination.

Although the 760 is more than three-quarters of a hundredweight lighter than the old 260 it replaced and much more aerodynamically efficient, it is still a lot of motorcar to move around. Powered in its basic form by the 2.8 litre V6 alloy engine which is produced in collaboration with Peugeot and Renault, it has acceptable performance for its class but suffers from rather heavy fuel consumption.

It was almost certainly to remedy this and at the same time cash in on the turbo "boom" that Volvo took its best known engine, the 2.3 litre four-cylinder is used in its mid-range 200 series cars, and added a turbo charger and intercooler which increased output to 173 bhp.

As a result the 760 Turbo has a top speed of 125 mph compared with the 760 GLE's 113mph, accelerates to 62 mph in 8.5 seconds and is on average four mpg more frugal returning around 22 mpg for mixed motoring. But at what expense to the car's drivability? I confess that I anticipated a car from happy meeting with poor flexibility and excess noise; hardly prime ingredients for a luxury car.

Yet the Turbo can be driven as smoothly as much bigger engined saloons and is noticeably quiet at speed. It is still possible to detect the "charge" arriving at around 3000 rpm but after a while even that fails to register.

Its angular shape is much more controversial. I like the front with its steeply sloping bonnet, front air dam and squashed radiator grill. But I have yet to meet anyone with a good word to say about the harsh lines of its squared off, tail-in-the-air boot.

10.30 Play School: Joyce Rushby's story of a Tasmanian shepherds...

CHOICE

documentary is the result. Not that Anak Krakatoa is much to write home about. It looks, in fact, as if the cataclysmic day back in August 1883 at all, but about what was just as described. The real miracle of Mr Plage's film is not, then, the son of Krakatoa but the incredible richness of the flora and fauna that has returned to the mainland at Ujung Kulon, 25 miles or so away, an area inundated by the 500 high tidal waves that Krakatoa pushed away just like his Dad, and managing the occasional tremor just to warn off anyone foolish enough to get too close to his gorgonous blossoms, and the near-dead Java Rhino that looks as prehistoric as the King Kong-type vegetation into which it treped...

TONIGHT'S PROM

- 7.30 Strauss: Festliches Violin Concerto No 2. Symphonies: Violin Concerto No 2. Symphonies: Violin Concerto No 2. Symphonies: Violin Concerto No 2...
8.40 Elgar: Symphony No 2 in E flat major. Wanda Wiłkomłowska (violin). National Youth Orchestra of Great Britain conducted by Sir Charles Groves. Radio 3. In Stereo.

Radio 2

- News on the hour every hour (except 8.00pm and 9.00pm) Major Bullen: 7.00am, 8.00am, 1.00pm, 6.00 and 12.00pm. 8.00am: John Peel's Radio 2 Breakfast. 9.00am: Ray Moore. 10.00am: Terry Wogan. 11.00am: Johnnie Walker. 12.00pm: The Big Breakfast. 1.00pm: The Big Breakfast. 2.00pm: The Big Breakfast. 3.00pm: The Big Breakfast. 4.00pm: The Big Breakfast. 5.00pm: The Big Breakfast. 6.00pm: The Big Breakfast. 7.00pm: The Big Breakfast. 8.00pm: The Big Breakfast. 9.00pm: The Big Breakfast. 10.00pm: The Big Breakfast. 11.00pm: The Big Breakfast. 12.00am: The Big Breakfast.

# Town where the America's Cup runneth over

# Third suspected death in kidney disease outbreak

By Arthur O'Shea

A third death was reported yesterday in the outbreak of the kidney disease, Haemolytic Uraemic Syndrome, which has affected four areas of the country.

In Nottingham, not until now affected, a girl aged nine died in the Queen's Medical Centre on August 17. Dr Norman Miles, the area health authority medical officer said last night: "It is 95 per cent certain that she died from the disease. A post mortem has been carried out and further tests are being made. I am treating it as an isolated case and there is no cause for alarm."

Over the past two months two deaths have been reported in the Black Country, a woman aged 59 at West Bromwich and a girl aged two at Willenhall near Wolverhampton. The number of children affected in the Black Country, Manchester and Sheffield totals 28.

Many have received treatment on kidney dialysis machines. Some are being given doses of vitamin E but it has been emphasized this is not "a miracle cure".

Health officials in the three communicable diseases surveillance centres at Colindale, north London, in an effort to find the cause of the outbreak.

The Trent regional health authority at Sheffield said that so far in its area six children had been treated for the illness at the Sheffield Children's Hospital and three were still in hospital.

They come from the hospital's catchment area of Sheffield, Rotherham and Chesterfield. Last year, the hospital treated four cases and two of the children died.

In Manchester, Dr Michael Painter of the public health laboratory at Whittington Hospital said that four children had been affected since July, all of primary school age, from the Manchester area. All had recovered fully although two had needed kidney dialysis treatment.

Dr Paul Gully of Birmingham, a consultant in community medicine said the outbreak in the other cities should provide valuable information. He commented: "When a case is reported, we are asking those investigating it to ask a set number of questions in the hope that we can find a common factor."

"We normally get a few cases of this disease in the summer and autumn period, but because of the publicity this year, more are being reported than normal. Hopefully, with the added information and more suggestions from people up and down the country, we can establish a cause."

"My job, with other community physicians, is to try to establish a cause while clinicians work on a cure. We have received many suggestions as to a possible cause and are now getting down to the task of examining them."

The Centre for Applied Microbiological Science at Porton Down, Wiltshire, has blood samples from all the infected children in the Black Country; cultures have been prepared in the hope of isolating the suspected virus.

But yesterday, an official said that the centre had no progress to report. It could take up to a week for anything to grow.

The Department of Health said that there were usually between 18 and 20 cases of the disease in the United Kingdom each year.

# Expert argues for ban on chemical weapons

Continued from page 1

lethal substances because countries insist on the right to make and use them as riot-control agents. He suggests abolishing the most biologically hazardous of these agents and confining others, with no legitimate civil application, to limited production under special licence.

He sees the most difficult issue as the question of compounds lethal only when two substances - relatively harmless when apart - are combined during weapon-flight to produce a potent toxin, and argues that more elaborate controls are needed for some common commercial chemicals that could be misapplied.

Deactivation of stockpiles of super-toxic agents would need a group of on-site inspectors with expertise in analytical control and book-keeping. Verifying that no new substance was being made would present difficulties, whereas suspensions of testing could be verified by satellite surveillance.

A place in the Newport sun for some, while invisible yachts fight it out for the cup. Photographs: Bob Adelman

From Trevor Fishlock Newport, Rhode Island

It is an ancient mariner, his head a block carved with a rusty chisel. "I'll tell you what the America's Cup is all about," he threatened in a voice made sandpaper by salt and cigarettes. But his words are lost as the jazz band on the jetty strikes up to greet the yachts returning from their day's jousting, and the grompries move forward to be nearer the crews.

All the nice girls love a sailor, and in cup year hearts melt faster than the butter almond ice cream, flavour of the month along Thames Street, which Rhode Islanders pronounce Thaymes, just to be different.

Newport is a fine old town with seventeenth-century roots, George Washington's pew in one of the churches and pretty painted wooden houses in streets that seem like sets built for a sea-going film epic. It is, inevitably, a place where shops are called Shoppes.

In its day it was a fortress of American class consciousness, where fearsome society aspirants condemned unsuitable aspirants to the elite as "not at ease in a ballroom".

Here the super-rich, like the Vanderbilts and Astors, built their holiday mansions overlooking Long Island Sound. And when the America's Cup competition move here from New York in 1930 the combination of money, high society and gold-plated yachting, as well as the town's sublime situation, assured Newport's place as a magnet and famous resort.

The America's Cup is a major industry, and the economy here is partly built around the triennial challenges. Thousands flock here to imbibe the atmosphere created by what is essentially a non-spectator sport conducted out of their sight several miles out to sea. Some people go out to see the yachts in action, rather like making a safari in search of a rare animal, but most only see the yachts when they leave in the morning and return to their docks in the afternoon.

Twelve-metre yacht racing is the most costly of sports. The British challenge for the Cup, for example, is costing about £5m. And, in a variation of what Archimedes discovered, the yachts displace a lot of money which slopes into the town to support hotels, restaurants, bars, shops and galleries selling yacht prints and other knick knacks.

Boutiques along America's Cup Avenue and 12-metre Mall sell thousands of T-shirts. The intense rivalries and loyalties here have made the T-shirt a modern version of heraldic

caused. The Fosters flag flying over their dock has the look of the Jolly Roger. The Australians still put a modesty skirt around the keel when the yacht is hauled out of the water each evening, and have posted guards to stop peekers.

Naturally you can buy a "secret keel" shirt. The seriousness of this year's challenge offers a conundrum. The British and Australian hopefuls are more competitive than any previous challengers and are in a long line of challengers who over the years have spent millions of pounds to win the ugly old pot. But the quaintness and mystique of the competition lies in the fact that the Americans have never lost the cup. It may be sentimental to say so, but if the Australians win the America's Cup the competition will never be the same again. Much of its magic will have vanished like the money spent to get it.

Americans are worried because the Australians have closed the technology gap with a controversial delta-winged keel the Americans think may not be kosher and which they are still trying to have ruled illegal.

There is a lot of huffing and psychological warfare in America's Cup racing and the Australians are revelling in the fuss their secret weapon has

caused. The Fosters flag flying over their dock has the look of the Jolly Roger. The Australians still put a modesty skirt around the keel when the yacht is hauled out of the water each evening, and have posted guards to stop peekers.

## THE TIMES INFORMATION SERVICE

### Today's events

#### New exhibitions

The Last Beduin of Jordan, the Asley Checham art gallery, Trinity Street, Stalybridge, Tues to Fri 1 to 8, Sat 9 to 4 (until Oct 6).  
Oxford University and College Portraits since 1848 and 20th Century Portraits, Drawing, Ashmolean Museum, Oxford, Tues to Sat 10 to 4, Sun 2 to 4 (until Oct 23).

Oil Paintings by Kenneth Wynn, Abble Tree House, 9 Fore Street, Badleigh Salterton, Devon; Tues to Sat 10 to 5 (until Sept 3).  
Man and Music, Royal Scottish Museum, Chamber Street, Edinburgh; Mon to Sat 10 to 5, Sun 2 to 5 (until Jan 15, 1984).  
So this is what we do with the lead, Peak District Museum, Pump Room, Pavilion, Matlock Bath, Derbyshire; daily 11 to 5 (until Sept 11).  
Action Portraits, Scottish press

### The Times Crossword Puzzle No 16,212

This puzzle, used at the London B regional final of the Collins Dictionaries Times Crossword Championship, was solved within 30 minutes by 19 per cent of the finalists.

- ACROSS
- Old geographer gives nothing to London hospital in return (6).
  - It's the bar of the court, there's no denying (8).
  - Beat artist? (9).
  - Brother (or other relation) of Valentine (5).
  - Str it into stores (7).
  - Huffman's girl shared the fate of Belle's Madilla (7).
  - Charles has no directions for chopping tree (5).
  - There's nothing right in evil practices - they suck you down (8).
  - Reveal French article, about finished (7).
  - Student owns a car in Tibet (5).
  - No end of money - so cautious a bird? (9).
  - Cry about a mere disaster, eg milk spill here? (8).
  - East German terminus for Belgian destination (6).
- DOWN
- Fond of company, Italian and Greek islands rise to receive one (8).
  - Of independent means, is he a rip? That's right? (7).
  - Crashing a car - habit of Toad and Co (9).

- Plant benefiting from Norval's father's frugality (9,5).
- Empty-headed, n.b. state - what a reputation! (5).
- Recreation when enjoyed by the older generation (7).
- Fallen, it yells herein for mercy (6).
- Remark about railway's first provision for sightseers (11,3).
- Press annoyed by German award (4,5).
- False beard - yet was shopped (8).
- Snoopy place to seal the lid? (7).
- How to get round something, or perhaps about it (7).
- Such characters are inclined to show stress (6).
- A foreign member's pacifist suggestion (5).

Solution of Puzzle No 16,211

Prize Crossword in The Times tomorrow

### Scottish National

Exhibitions in progress  
Tory Island Painters and Aspects of Drawing, Arts Council Gallery, Bedford Street, Belfast, Tues to Sat 10 to 6 (closes Sept 3).  
The Human Form: Alick Knox and Catherine McWilliams, Peacock Gallery, Craigavon, Northern Ireland.  
Summer exhibition including miniatures by Wendy Zollinger and works by George Guest, Trevor Grimshaw, Donald Crossley, Bhoulat Barlow and Tom Durkin, the Looking Glass Gallery, 53 Halifax Road, Tottenham, Tues to Sat 10 to 5.30 (closes Sept 24).  
Celtic Art, Ashmolean Museum, Beaumont Street, Oxford; Tues to Sat (inc Bank holidays) 10 to 4, Sun 2 to 4 (closes Oct 4).

MUSIC  
Baroque orchestral music on original instruments, Duchy Grammar School, Tregu, nr Truro, 8.  
Concert by the Ulster Orchestra, White Hall, Belfast, Northern Ireland, 7.45.  
Recital by Mark Whale, violin, and Andrew Bottill, piano, St Andrew's Church, Fearfish, Cumbria, 7.30.  
Six organ recitals, no 6, Martin Neary, Christ Church, Cathedral, Oxford.  
Recital by St Anne's Cathedral Choir, Belfast, at Lincoln Minster, Lincoln, 7.30.

General  
Alternative Cabaret at the Third Eye Centre, 350 Sauchiball Street, Glasgow, 9.

Last chance to see  
Works by Susan Horsfield and Herbert Morse, the Stilesworth Gallery, Stables End, Halesworth, Suffolk; Mon to Sat 11 to 5, Sun 3 to 6 (closes today).

Winning designs in the Johnson Matthey silver design competition, the Design Centre, 72 Vincent Street, Glasgow; Mon to Fri 9.30 to 5, Sat 9 to 5 (closes today).

Anniversaries  
Births: John Dryden, Aldwinkle, Northamptonshire, 1631; John Denby, Derbyshire, 1646; Antonio Salieri, composer, Legnano, Italy, 1750; James Nasmyth, inventor of the steam hammer, Edinburgh, 1808; Charles Doughty, Arabian traveller, Leiston, Suffolk, 1843; Orville Wright, aviation pioneer, Dayton, Ohio, 1871; Denise Buisson, philosopher, Paris, 1862; Sir Henry Wood, Hitchin, Hertfordshire, 1944.

The warm south  
In a blind tasting of Provence wines, experts chose as the best available in Britain:  
Château Grand Senil 1980 VDQS Coteaux d'Aix, Cork and Bottle, 44 Cranbury Street, WC2, £2.25.  
Domaine des Feraud 1981, AC Cotes de Provence, Crues de la Madeleine, Folham Road, SW10, £3.65; and as particularly good value for money, Bilette de Provence, Lised, AC Cotes de Provence, International Stores, £2.39.

Retail Price Index: 336.5  
London: the FT index closed up 2.9 at 738.9

### Food prices

New season English Discovery apples are in the shops at 40p to 55p a pound and have attracted much favourable comment. Peaches and nectarines are plentiful, but the former are not always fully ripe and fluctuate considerably in price. Spanish honeydew melons are good value at between 40p and 50p, depending on size, as are Italian blue plums, 25 to 45p a pound and greengages 20 to 25p. Best buys among non-seasonal fruit are blackberries 60 to 80p a pound and blackcurrants 50m 70p. English runner beans 50 to 60p a pound, calabrese 50 to 60p, cauliflower 35 to 45p each, courgettes 30 to 45p a pound and marrow 25 to 30p each are all recommended. Despite predicted price rises later in the year, English new potatoes, both red and white are good value at 10 to 15p a pound. So too are tomatoes at 25 to 30p a pound and celery at 20 to 30p a head.

The outstanding seasonal meat buy is home produced lamb at £1.19 to £1.64 a pound for whole legs and shoulders from 68p to £1.10. For those with large freezers this is a good time to buy in winter stocks. Sainsbury's have reduced pork prices - 82p a pound for whole leg of beef and Tesco have fire rib of beef at £1.58 and boneless back ribs at £1.44.

North: A1: Southern end of Bedford by-pass. Northumbria: A566: Westbound traffic diverted at Carrington Road, Stockport, Greater Manchester; A66: Diversion, delays at Eden Bridge, Kirkby Thore, near Appleby, Cumbria.  
Scotland: A87: Temporary traffic lights at Inverinate, near Dornie, Ross and Cromarty; A7: Temporary traffic lights south of Goresbridge, Midlothian.

### The Papers

The New York Times said that it was rare for a proud and powerful nation to admit shabby behaviour but that is what the United States did in the Klaus Barbie case. The admission of blame the United States made on Tuesday, first to itself and then to France, went far to redress national honour, the paper claimed. The salvaged honour, it claimed, came from a comprehensive Justice Department report that served history and invited "a new era of honesty and integrity".  
The Daily Mirror makes its own bid in the "stranger than fiction" stakes with the story of Mr Sayed Abdul Mabood, who was challenged by immigration officials at Heathrow. Suspicious by nature, they thought he was having them on when he showed a passport giving his birthdate as December 13, 1923. "No, 90, they were 90," Mr Mabood, a citizen of Pakistan has a son of 100 and another of 93, plus 12 other children. Listing "great events" of that year, the paper says "isn't the most remarkable thing that about 1823 simply that it was the year in which Mr Mabood was born?"

### Lighting-up time

London 6.48 pm to 8.28 pm  
Edinburgh 6.11 pm to 8.26 pm  
Manchester 6.00 pm to 8.26 pm  
Paris 5.04 pm to 8.46 pm
